Bookstore feat

By slick_editzzz on discord

Summary

In season 1, both episodes 2 and 10, it shows Joe as a child being forced to read and fully comprehend all books in the bookstore to make him not an “illiterate,” in Mooney’s own words. Mooney also admits that he strives for perfection, meaning that the comprehension present in this feat is perfect or at least close to perfect in nature (Would also apply to Joe’s composure in this).

VCI/Crystalized Intelligence/GK/KA aspect

A singular series of books that go over multiple languages has a count of 65 languages and all of such are taught at the levels of the CERF. Seeing as Mooney was described by Joe as someone who asks for the highest extreme possible or else he would be beneath his standards, it is more likely to be true that he made Joe learn all 65 languages at the highest level possible, that of which being C2 proficiency. To have C2 proficiency is to able to do all of this:

CEFR-level C2 (proficiency)

Skill	Description
Spoken interaction	You can take part effortlessly in any conversation or discussion and have a good familiarity with idiomatic expressions and colloquialisms. You can express yourself fluently and convey finer shades of meaning precisely. If you do have a problem you can backtrack and restructure around the difficulty so smoothly that other people are hardly aware of it.
Spoken production	You can present a clear, smoothly-flowing description or argument in a style appropriate to the context and with an effective logical structure which helps the recipient to notice and remember significant points.
Listening	You have no difficulty in understanding any kind of spoken language, whether live or broadcast, even when delivered at fast native speed, provided. You have some time to get familiar with the accent.
Writing	You can write clear, smoothly-flowing text in an appropriate style. You can write complex letters, reports or articles which present a case with an effective logical structure which helps the recipient to notice and remember significant points. You can write summaries and reviews of professional or literary works.
Reading	You can read with ease virtually all forms of the written language, including abstract, structurally or linguistically complex texts such as manuals, specialised articles and literary works.

Joe would also learn a large number of mathematical concepts. Examples of these are calculus, differential equations, theory of relativity, Taylor series, topology, combinatorics, number theory, algebra, mathematical physics, dynamical systems, geometry, information theory, probability, statistics, trigonometry, set theory, hilbert space, and more. He knows all topics in these subjects as well. (Too lazy to name them💔) He would also have full mastery and knowledge of almost if not all topics chemistry, science, history, and many other fields.

Vocabulary - C2 Proficiency in his primary language, which is english.

Information - Has well over a centuries worth of knowledge as just of all the topics excluding the languages it would take a normal person close to a century to reach the level of knowledge he has in those topics. As for languages it would take most likely 30+ years to reach the level of proficiency that Joe has in them, which is C2. He has a perfected level of proficiency in both.

Comprehension - Has C2 Proficiency in 65 languages + Has perfect mastery and knowledge on over a century's worth of knowledge.

Similarities - Joe knows how to apply all of his over century level knowledge perfectly.

This was all learned over the course of 48 hours as he looks pretty much the exact same start to finish, which would heighten this considerably. All of this also gets even more heightened as he was a 13-16 year old when he had done this. It is also heightened by the fact that Joe was in the cage which practically functions like how solitary confinement does, which can cause self harm, psychosis, and suicide.

VSI aspect

Many mathematical concepts raise VSI. Here are a few examples.

Geometry is fundamentally about understanding shapes, space, and the relationships between them, which would include properties of dimensions like 2D, 3D, and 5D and symmetry and transformations like reflection, rotation, translation.

Trigonometry involves understanding angles and the relationships between side lengths in triangles in both 2D and 3D. It also develops precision in visualizing angular relationships.

Topology studies properties preserved under continuous deformations like stretching and twisting.

The Theory Of Relativity requires imagining how space and time are intertwined in a 4D continuum. It forces the brain to think past 3D and "visualize" in the 4D.

All of this gets heightened as he was a 13-16 year old when he had done this. It is also heightened by the fact that Joe was in the cage which practically functions like how solitary confinement does, which can cause self harm, psychosis, and suicide.

CPI (WMI + PSI) aspect

Joe perfectly comprehended all information from all of these books in a total time of 2 days.

A book has 80,000 words and 500,000 characters. Seeing as there are 15,000 books in Mooney's, that would mean that there would be 1,200,000,000 words and 7,500,000,000 characters.

The timeframe would be 2 days / 48 hours seeing as Joe looks pretty much the exact same as shown as the scenes showing the before and the after.

This will be used to find Joe's words per minute and his calculation per second.

48 hours = 2,880 minutes = 172,800 seconds

1,200,000,000 / 2,880 = 416,666.667 word per minute

7,500,000,000 / 172,800 = 43,402.778 calculations per second

All of this gets heightened as he was a 13-16 year old when he had done this. It is also heightened by the fact that Joe was in the cage which practically functions like how solitary confinement does, which can cause self harm, psychosis, and suicide.

FRI/Fluid Intelligence aspect

Joe learned and got perfect mastery (or perfect knowledge application) of all information present in the VCI/Crystalized Intelligence portion in simply 48 hours which would take a normal person well over a century to learn while under a form of solitary confinement, which would give effects like self harm, psychosis, and suicide, all done at the ages 13-16. All of this would give Joe impossible learning ability and NCPS and very high cognitive adaptability.

Insight aspect

Joe perfectly comprehended all information in the VCI portion in JUST 48 HOURS and he knows how to utilize all of that information perfectly. This would show very high Observation, Perception, and Analysis.

There is no Intuition in this feat.

Intra EQ/Adversity Capacity aspect

Joe was able to persevere and do all mentioned while he was in a form a solitary confinement, which has the effects of self harm, psychosis, and suicide. This showcases inhuman levels of intra EE, intra EM, Mental Fortitude, Stress Tolerance, and Perseverance.

Joe also in 1x10 said that the cage taught him how to compose his emotions incredibly well, and then the next scene is the scene where Mooney is talking about him making Joe strive for perfection, hinting that Joe has near perfect or perfect intra EM, Mental Fortitude, Stress Tolerance narratively, though this is somewhat shaky so I advise if you aren't very good at debating or just started to not use this. Even then, it is too large of a gap comparable to the other scaling to even be considered that much valid. So sure you can use this, just don't expect to find much success with it.

There is no intra EU, Intra EP, Cognitive Discipline, or Impulse Control/Managment in this feat.

Ranking of the FSIQ/Intelligence categories

VCI > FRI > WMI > VSI > PSI
VCI > FRI > CPI > VSI

Crystallized > Fluid

Ranking of the Insight categories

Perception > Analysis ≈ Observation > Intuition

Ranking of the Intra EQ/Adversity Capacity categories

EE > EM

Perseverance > Mental Fortitude > Stress Tolerance > Cognitive Discipline = Impulse Control/Managment

If there is anything that you believe I could have added on please dm on discord.
