Tablet Feat Rebunk

Made By Aryan

Note that the red texts are hyperlinks so if you see them, click them and do enjoy reading this document. And thank you for absolutely waiting for this.

For context on the debunk, I debated Ace, the original creator of Tablet Feat (TF), on its validity. When the verdict was issued, the judge deemed that I won all of the following points. I wrote this doc to clarify all of the debunks I made in order to comprehensively summarize the takeaways from Tablet Feat's validity and its current evaluation in SCD. The debate took place in PX district's "tablet feat validity" channel and it goes much more in-depth, so I recommend exploring it if you're interested (and GGs to Ace on the debate). Starts at pinned message. - Since the pedophile was appealing to the judge that was posited between Ace and against pedophile. I should probably start by diminishing how 'credible' the judge was and how Ace horribly blundered with him favoring indian tenum of all people to judge when he has records of hard defending him in RD when Dax exposed the pedophile and had heavily embarrassed him. Disgusting pedo defender and pretty much indian tenum is a genuine lunatic pathetic degenerate lolcow that I have ever encountered in SCD alike and he continues to prove this and a few others like him unironically. Conveniently PX pretty much removed the channel section for TF lol? I'm mostly relying on his original summary, and what I could recall when I read the debate myself.

Establishing how the tablet works in COTE inverse firstly so you'd be able to comprehend how the tablet feat would work under criteria which under this scan should provide the essentials, for fact checking purposes this scan in question is taken from Y2V3 Page 45-46 specifically.

TABLET OVERVIEW

Every student will be provided with a small tablet.

Provides a map of the island that you can view, allowing you to check designated areas and your current location in real time.

Can be used to view Task locations, detailed rewards information, etc.

Starting from the fourth day of the exam through the end of the twelfth day, students can view the group member list and scores for the top and bottom ten ranked groups. (Users can only view total score breakdowns for the top and bottom ten ranked groups, as well as their own group.)

Starting on the sixth day of the exam, the GPS search function will be unlocked, allowing users to view the current locations of all other students. (However, each search costs the user one point.)

The school may send you a message via your tablet in certain instances, such as in the event that a problem that impacts all students arises.

In the event your tablet's battery life has run out, you can recharge it at the starting point, or at specific locations on the map. (Tablets have approximately eight hours of battery life when you are continuously using the map application during the test.)

While I appreciated the fact that we didn't have to worry about charging our tablets, it would be safer to buy an external battery, because the internal battery would continue to drain over time even if we weren't actively using the tablet. Not being able to use your tablet, which could tell you where you were on the island, would be fatal. Besides, even though we were being told that we can charge the battery at the starting point or at certain other locations, we'd be missing other opportunities while we were stuck at one spot, charging our devices.

The most important part here is that the tablet explanation gives us the entire island visual for the students once they check under real time, especially GPS tracking which would be talked about soon enough allowing students to view students and their exact current location. Keep this in note which it'd be important way later on. Before the rebunking, please take a look on the old document Ace did which would be crucial for anybody's understanding for Takuya's TF impressiveness in deductions and premises and so on he had to take account for: Link

- The semantics and context dictate that takuya specifically HELD the tablet throughout the dialogue he had with d Tsubaki, in which he had complete visual access to the tablet until tsubaki specifically made him step back (the original timeframe is believed to be 0.5 seconds, but through this correction, the new timeframe can be interpreted as ~15 seconds which massively nerfs the psi.) Essentially, Takuya had 30x more time to execute his calculations. - Immediately wrong unfortunately though not surprised nor whatsoever disappointed, actually you retarded liar, the semantic and context only dictates that takuya was heavily preparing himself for the instantaneous visualization that would take place henceforth his heavy question towards her behavior within d tsubaki's and remarks and when he specifically *peeks* a bit which is clearly not enough for the whole thing henceforth the necessity for takuya able to held on his own himself for a clear look out visual spatial in the tablet, which would prove the immediate visualization of taking her tablet henceforth he trailed off and that it's rather a huge necessity and thus giving us a premise an immediate calculations once upon holding the tablet which makes the 0.5 or further 1.5 seconds at the very best in highball being more plausible and more than likely to occur, the ~15 seconds is also quite impossible with the premise given here and with her clear hesitant behavior also allows takuya to further profile her and emotionally understand her hesitant behavior beforehand which we do see take place within the context itself, another implication and basis why takuya taking tablet must be necessitated with a quick visual and calculations upon seeing the information given. Take a moment of notice of when she says *butt in* and when she *brushes him off* specifically, this is a quick notion behavioral sign and a quick immediate action once tsubaki realised what takuya was doing henceforth her huge criticism towards him afterwards. Also another reason takuya himself was heavily surprised with him saying *“Wh-what?!” sputtered Yagami* which proves what I have said with the quick behavioral shift and attention span tsubaki did on takuya that it rather surprised him due to the fact he trailed off and touched it quietly by context, yet she perceived it due to his sudden movement which takuya knew the risk for but did it anyways considering her hesitant behavior to show data to himself which his preparation for visual worked in his favor here massively, rather its because he held the tablet with the time frame for the suggested seconds that I suggested and what I affirmed in the context given, and as a plus yet again the ~15 seconds is simply atrocious given the circumstances and the context given lol? If what you’re suggesting pedo is entirely correct, takuya

being surprise dictates and implies a short term further than ~15 seconds, if those 30x calculations was executed takuya being entirely surprised and getting brushed off entirely which does not make sense with the context given in terms in what you're suggesting, also no clear timeframe whatsoever for these, the only we have is a quick notion behavior from tsubaki which implies a further semantical sense in a faster time frame than what you suggested and tsubaki herself had noticed it faster henceforth why she screamed with a punctuation mark within the context.

The evidence for his questioning behavior and profiling towards Tsubaki under Y2V4 Page 160

> Tsubaki guessed that this wasn't the result of a simple accident that had befallen the three groups.
>
> "What's the matter, Tsubaki-san?" asked Yagami, seeing the clouded expression on her face. He peeked at her tablet without asking. "Did something happen?"
>
> "Three of the five groups of first-years that we dispatched stopped moving," she replied. "The three that stopped all have something in common too. They were all in the same position, and groups of second-year students were there as well."

> "Respond," said Tsubaki, once again calling to them via walkie-talkie.
>
> But no matter how long she waited, she still didn't receive an answer.
>
> "Could it be that they've simply suffered some kind of accident?" Yagami suggested. "Many, many groups are constantly on the move in search of designated areas and Tasks on the island. I think that arbitrarily deciding that something is wrong could be dangerous."
>
> "Even though three groups just so happened to be blocked by second-years?" she rebutted.
>
> "W-well, yes, that does appear true, but…"
>
> After another five minutes had passed, Tsubaki, suppressing a desire to be impatient and enduring, refreshed the search results.
>
> "It looks like they've started moving again, more or less. But they seem quite sluggish, don't they?" remarked Yagami.

Evidence of Takuya stepping back and his clear surprise of the moment and Tsubaki's criticisms towards him Y2V4 Page 161

"It certainly appears as though we're being sabotaged by some second-years, but…if that's the case, then who in the…?" Yagami trailed off. Without asking, he took the liberty of touching Tsubaki's tablet to check what was going on.

"Hey! Don't butt in," said Tsubaki, brushing him off.

"Wh-what?!" sputtered Yagami.

"I'm letting you stay here because we're allies for the time being, but I don't remember allowing you to touch my things without my permission."

Tsubaki's eyes burned as she glared at him, causing Yagami to take a step back.

- Complete 3D visualization is not necessitated. Rather, only consideration of the ramifications of the 3rd dimension is required for TF. So, general terrain features and its effect on travel were accounted for, but not actively visualized. (vastly decreases the vsi correlation of the feat during Takuya's calculations). - Again yet again another piss of a point made by pedo also yet again, it is necessitated though lol? when visualizing something in terms of an action especially an island where takuya plans a massive maneuver which is ALSO the tablet explanation gives us a brief explanation where it directly and blatantly showcases the island matter of fact which takuya would have saw through the tablet alone, allowing takuya for any premises for the 3D visuals that TF is suggesting. Also no dumbass and by the way thanks for the concession actually, but point is if takuya was able to go in quote and quote go into the terrain and travel he has accounted for, this means entirely he was able to visualize and have premises of the necessitated premises of the island as shown of the direct statement of the tablets information which he was able to see and go in a specific route and take account for aka the locations and so on, in simple terms he was able to visualize and look for a specific route upon taking action. Common sense pedo.

- The basis of visualization is completely restricted to a 50 square inch map and should not be treated as a visualization of a 35 square km island, inherently limiting the cpi/vsi of the feat by a significant margin. - Is it because of your lack of common sense and illiteracy that the tablet would showcase and takuya has to necessitate said square km island? which allows takuya to even maneuver at night while executing his deductions towards roads/terrains in the islands itself. This is why takuya was able to move in any designated area and was able to escape after pulling a mass panic towards the student and cliffing someone in the cliff and having done horribly damages onto them and their massive injuries. It wouldn't make sense that takuya did not at all visualize the given information in the tablet which as aforementioned is an absolute necessity.

Take it as this
P1: Tablet absolutely reveals all sorts of information towards the island which my scan establishment gives especially the GPS information which Takuya had used for and saw himself prior to preparing himself for memory recall and visualization to take place when Tsubaki was entailing multiple information towards him which allowed Takuya to have premises and allowing himself to prepare for the visual that would take place
P2. Takuya who can memorize tons of memories like student information plus his prior EQU of Tsubaki and he entirely knew the plans he'd execute once learning the details of the tablet aka the preparation for memory visual spatial
P3. Takuya was able to move in a dark area in the island quietly and was extremely concealed due to P1 as a set premise, moreover was able to know each specific direction and where not to go and go for
P4. Takuya knew the adversities such as careless students bumping onto him since he did create a mass panic towards injuring a student and each students would randomly either in search for who's behind the cliffing or concerned students for other students but due to P3 being necessitated, he was already far away
C. Takuya has to necessitate all visual information regarding the tablet once upon seeing it which P1 and P2 necessitates in premises given, and has to do it making his movements of the island far more easier for manipulation regarding P3 and P4 which supports the two premises aforementioned, and this is the likely explanation considering he was able to conceal himself well and knew specific directions to go back and where not to go to not be spotted by anybody. Simple enough pedo?

- Differential calculus cannot consistently measure the meter-perfect line up of Riku and Kito due to a vast array of random occurrences that may fluctuate the calculation. Instead, there were multiple dozen meters of leeway for their confrontation to be premeditated, as opposed to the flawed precise meter claim in TF. This is due to the fact that Kito and Riku's conflict would be initiated upon seeing each other (albeit in an area with poor visibility, which is why the margin of error is only some tens of meters). This massively nerfs the vsi/cpi required yet again. The actual difficulty of the equation that takuya executed would therefore be overstated as well. - This claim is a nothing burger and there's zero citation which random occurrences might happen in his claim here, but what the story did instead is a perfect line up of the confrontation which allowed Takuya to foresee and deduct for as Ace himself explained, moreover Takuya profiled Riku way before so he'd have premises to go by, henceforth the deductions would be valid rather in this case. Common sense yet again pedo.

Lastly, as a disclaimer: I don't want this debunk to be treated as any form of an attack to anyone. My intent was solely for TF to be evaluated fairly, and I have no ill intent or anything of the like towards the creator of this doc. - Pedo himself said so, this rebunk isn't aimed at anybody whatsoever and totally and I totally did not do this because I'm rather bored and also wants TF to be evaluated as its use to be prior to the active SCD years ago, though this time lol, nobody would be able to debunk this with me existing. Good luck though, I'd likely rhetorically rape who did try anyway and especially pedo himself actually if he didnt slit his throat yet when i told him to.

If you would like to discuss details about TF, then add my discord account at: or discuss this in the comment section if i take interest at you, you may add my discord account under the user moniakatsu
