Quotes:

“When you eliminate the impossible, whatever remains no matter how improbable, must be the truth!”

“My name is Sherlock Holmes. It is my business to know what other people don't know.”

“You know my methods Watson”

“Elementary”

“My dear Watson”

“It may be that you are not yourself luminous, but that you are a conductor of light. Some people without processing genius have a remarkable power of stimulating it.”

“I am not detained by the police! To supply their deficiencies! I may be committing a Felony but I may be saving a soul.”

“There’s no one who knows the higher criminal world of London than I do.”

“I’ve heard of you before! Your Holmes the meddler, Holmes the busy body, Holmes the Scotland Yard Jack in-office.”

“The Game is AFoot.”

“To a great mind, nothing is little.”

“Intelligence is deeper in those who push past what they already believe is true”

“Sometimes you need to get uncomfortable to get comfortable.”

Basic Background:

Sherlock was born in 1854 with his older brother Mycroft who was born in 1847. In his junior Years Sherlock said Mycroft was decently smarter than him at this time. In his late teens he attended at least one of Britain’s best Universities. While this is not clear it is most likely either Oxford, Cambridge or both. At the age of Twenty Sherlock had found his life’s calling, a job that relies on complete logic and nothing else. He

created the world's first Consultants Detective. People would consult Sherlock to solve a Murder, crime or problem that they have. While in university he was an independent Student of Chemistry while doing a few side interests. He had seemed to have grown up with his natural abilities of Observation & deduction. He was able to apply this to learning Science and learn it at a considerable rate. In 1881 Sherlock meets his companion and best friend Doctor John Watson and go on to solve cases together. **(Logical reasoning, learning ability, VCI, academics & overall knowledge)**

Completion: 80%

Full Scale Iq, Fluid intelligence, Overall knowledge, Academics,General intelligence, calculations, Cognitive Ability & Memory:

•It's stated that Sherlock has an incredibly massive Mind palace which he calls a "Brain attic" where he stores all the information he needs for all his cases. This is incredibly impressive due to how much information he must remember for his cases. Cases like the dancing men require remembering a bunch of mildly different stick figures and associating them to specific letters. Sometimes he has to remember all conversations, visual details of all people, all time details & all emotions at a given place. And sometimes he's visualising all of London. My point is Sherlock's Mind palace would be absolutely astonishing in terms of size and there are times where he Visualises all of London and it would also be stored in his mind palace. He also stores all his knowledge inside this mind palace this includes an In-Depth knowledge on: World politics, chemistry, military codes, instruments, British Law, boxing, single-stick, swordsmanship, Geology, painting, sensationalism, Types of cigarettes, drugs, disguises (which would mean an in-depth knowledge on Fabrics, make up, hair gels and fashion design), animals, psychology, nature, different types of handwriting, history, science, government secrets, world geography and submarines. It's also stated he has complete control over his mind and can take things out and in it whenever he wants. Basically the size of the attic in his head is incredibly large, Probably bigger than every single visualisation & piece of information he's ever acquired combined. It can be inferred that to find this information he has to search through miles and miles of his mind palace to find the specific information he needs for a case, which logically would take

him only a minute to do. All this information Sherlock applies to every case, which are some of the most abstract and creative situations ever conceived. This would count as an amazing Knowledge application.
(WMI, Long term memory, VSI, PSI, knowledge, academics, crystallised Intelligence, knowledge application & VCI)

•The induction he made about The Man's Hat was done at one glance.
(PSI)

•Can tell from the Word spacing, vocabulary, formulation of works & General Grammer if the writer is a woman or a man at a glance.
(VCI & PSI)

•Speaks English, Latin, French, Greek, Italian & German.
(VCI & knowledge)

•From just one glance he could tell that the windows were 30 feet off the ground. This means in a second he was able to mentally measure how high the window was above the ground.
(VSI & PSI)

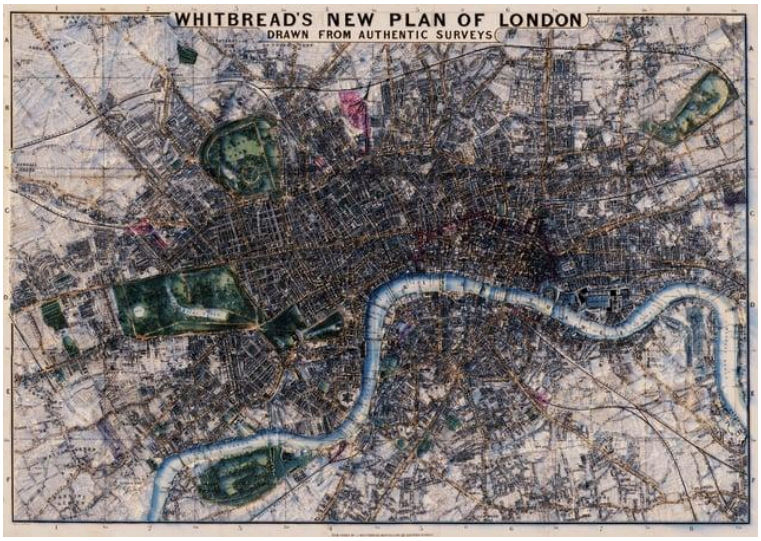

•Visualise an entire part of the countryside. This includes the dozens of trees in the background, the mile long road, a small bridge, the small river below the bridge, the miles of General grasslands and the exact positions of a cycler and their stalker.
(**VSI)**

•Analysed the Dancing men code. By knowing the name of the person who the code is meant for being "Elsie" and E being the most common letter in the English. You can find in a part of the code where one of the dancing men showed twice in the same Places of E's are in Elsie. From there he can infer and predict other words in the sentence and use those predictions to predict other words.
(VCI & knowledge)

•Visualised/Remembered the entire building where the Naval treaty was stolen. This included the two stairways and the room and the downstairs area. This also includes the main room where it was stolen, which was covered in: Random papers, documents, couple desks, a shelf, the two doors and the windows which were thirty feet off the ground.
(VSI & WMI)

•Became a expert on the mechanics of submarines in at least thirty minutes
(PSI & learning ability)

•When he was in a cab with no windows after it turned in a few directions & drove for a long while. Sherlock said he knew exactly where in London they were. This means that he has a visualisation of THE WHOLE OF VICTORIAN LONDON to be able to locate where he is by the movement of the cab alone.

It makes no sense that he would only remember part of it (considering how good his VSI & WMI is and how he always remembers everything in as much detail as possible) so therefore he must remember all of it. Plus he's shown many times to know the location of very specific buildings in London so from this I think it's safe to say he visualised of London
(VSI & WMI)

•After only reading a newspaper once (in like seven minutes), he remembers every single word in the newspaper. Now newspapers have on average 75,000 words and since it took him an estimated seven minutes to read it that would mean he read 179 words per second.
(WMI & PSI)

•At a glance he can infer which soil is which type.
(PSI, crystallised intelligence & knowledge)

•Was able to infer Watson had been in Afghanistan in less than a second. (See reasoning section for what he was able to infer).
(PSI)

•When a big part of the Norwood house was burnt down Sherlock visually reconstructed the entire house and what it would've looked like before the burning. This includes the exterior and interior in perfect detail, he's able to reconstruct the house from the size of other specific parts of the house.
(VSI)

•Inferred that Mr McFarlane was a: Bachelor, Solicitor, Freemason and a asthmatic in less than a second. (See the reasoning section for how he did it).
(PSI)

•Visualised the entire layout of glass lands, roads, nearby houses and the priory school itself.
(VSI)

Overall EQ, overall SOCQ, overall AQ, Seeing through People, Oratory skills & Psychology:

•When Sherlock analysed the man's hat he had made the inference that he had recently been divorced. Now he had also bought a goose early that morning (Which Sherlock inferred was for his wife), that implies desperation to stay with his wife but not malicious desperation but rather sad desperation and he trying anything that is possible to stay with his wife and not be alone. Just to note he profiled all this about a man FROM HIS HAT and everything he profiled about him is correct.
(Emotional perception, Emotional understanding & psychological profiling)

•Sherlock wrote the article "the book of life" one of the points was that by seeing fleeting facial expressions & seeing an involuntary movement of muscle. This was written by Holmes and he must've done his own research as this kind of information didn't exist back then. Meaning Holmes himself must be able to perceive micro expressions on peoples faces.
(Emotional understanding & Emotional perception)

•Was able to manage his emotions while being hunted down by Moriarty who is a continental level threat and could've killed with ease if he wanted to but showed incredibly little to no signs of nervousness or stress.

(Emotional management, stress tolerance, impulse control, discipline, composure & mental fortitude)

•When Colonel Moran (the second most dangerous man in England behind Moriarty) who was a professional sniper who had great complex strategies and plans to assassinate Sherlock, Sherlock was Completely calm and managed all fear he felt for himself and for Watson and was literally laughing instead.
(Emotional management, mental fortitude, stress tolerance, discipline, composure & impulse control)

•Did show any signs of physical or mental reaction to Watson shouting at him for taking Drugs.
(Composure & mental fortitude)

•Watson thinking about Sherlock solving the case can calm him down in stressful situations like when seeing a gruesome crime scene.
(Emotional management)

•Perceived that Irene & her lawyer are actually in love despite her having a near perfect act that it was just an ordinary relationship between a lawyer and an actor.
(Emotional perception)

•Using psychological details he noticed that Helen distrusted her father but also she still over him and his incriminating information about him.
(Emotional perception & Emotional understanding)

•Understood that if he didn't get the naval treaty back he would have an overwhelm of shame for him and that he's brought towards his family and he wouldn't be loved by anyone.
(Emotional understanding)

•Managed a man's emotions who is incredibly stressed to the point he faints from time to time.
(Emotional management)

•Became best friend with nearly all his clients despite some of them having social problems
(Social skills)

•For all his disguises he formulates completely different personalities for each one for him to act out perfectly.
(Emotional engagement)

•Sherlock had been infected with a Drug that stimulates the parts of your brain which controls fear. The drug even in small doses for a couple seconds will send a person insane in seconds. And in less than a minute you would die from mental stress. Sherlock is able to inhale the drug at very close range for over 10 minutes, during this time he had intense hallucinations of dying at the hands of Moriarty which felt incredibly real. Afterwards when he woke, he was a tad shaken but still regained composure in a couple seconds. This is an insane feat as he was literally able to manage his fear which is being amplified so much by a large dosage of the drug. Sherlock did this to lure the killer so he did this on purpose to himself to catch the killer.
(Intrapersonal Emotional management, Emotional engagement, mental fortitude, stress tolerance, perseverance & impulse control)

•Even while he's dying and should be resting in bed 24/7 to postpone his death, he's willing to solve cases even in his incredibly sick and dying state. He's basically willing to engage the rest of his life to solve cases, even if that includes dying in the process.
(Emotional engagement)

•Was able to manage the emotions of a man who had just seen his brother die and was having a panic attack.
(Emotional management)

•Didn't eat or drink and stayed in the same chair and not leaving it at all and acting like he was desperately in pain and sick constantly for three days straight with no faults. This also meant he quits his tobacco addiction for three days (which is incredibly hard when you smoke consistently every single day) so him being able to do this is incredibly impressive. Plus not eating or drinking for three days which also means he didn't pee or poo for all those days. He stayed in the act the entire time.
(Emotional engagement, Emotional management, mental fortitude, stress tolerance, discipline, perseverance & impulse control)

Manipulation, Deception & building up influence:

•Sent a fake letter to Abe that appears to be from Elsie when it's actually from Sherlock
(Non-verbal deception & strategic deception)

•Sherlock has disguised himself as a: seaman, unemployed poor man, clergyman, option addict, a common loafer, an old Italian priest, a bookseller, a plumber, a dying man, an old sporting man & an old woman. These disguises are often done without makeup and are so good people like Watson (who literally lives with him) can't tell it's him.
(Disguise mastery & Acting skill)

•In less than ten seconds persuaded a girl to stay in a specific room for the entire day and then go upwards to her room at a specific time.
(Direct Manipulation, logical manipulation & persuasion)

•By making Watson set off a fake fire he indirectly made Irene worry and Try to grab the letters to keep them safe revealing their location
(Logical manipulation, indirect manipulation & doubt tripping)

•Deceived a salesman that he had bet that the geese were country bread and not town bread so that he'd try to prove him wrong and show him who gave him the geese.
(Bluffing & verbal deception)

•Intimated a man so much with the threat of prison that he was begging on his hands and knees.
(Direct manipulation, Emotional manipulation & intimidation)

•Persuaded inspector to find the investigator to sign a warrant for him despite them having little reason for the warrant and it being near midnight
(Direct manipulation, logical manipulation & persuasion)

•Deceived a man that he, Watson and someone else will return to London.
(Verbal deception & bluffing)

•Intimidated a thief to run away
(Direct manipulation, Emotional manipulation & intimidation)

•Was able to stop a man from attacking him by showing the ring of his murdered wife. Making him feel unimaginable guilt.

(Direct manipulation, emotional manipulation & guilt tripping)

•Persuaded a bank director to spill Confidential secrets about the bank even though it could be detrimental to his life.
(Direct manipulation, persuasion & logical manipulation)

•By recreating the murder method in a public way to a perfect degree (using the same chemicals, same amount and same timing). When the culprit sees this he would recognise that somebody knows what he did and would come to reveal himself out of Guilt.
(Indirect manipulation, logical manipulation & guilt tripping)

•By disguising and acting like he's an incredibly sick man and getting the culprit to treat him. Due to their General narcissism he would confess to crime thinking Holmes is Dying.
(Indirect manipulation & logical manipulation)

Strategy, Planning & Tactics:

Sherlocks strategy to locate the naval treaty:

Context: A man had been asked to keep a naval treaty safe but when he wasn't looking it had been stolen. The man then came to Sherlock Holmes for help as he's incredibly ill from stress and the fact he's lost the treaty.
Actual strategy: Sherlock had predicted that 1. The Naval treaty was in the main room where the man rests for most of the day and 2. The man's wife's brother is the one who stole it but he doesn't have anything to back up these hypotheses. So firstly he Persuades the wife when nobody's looking in less than ten seconds to stay in the main room for the entire day until 10:00PM and then carry a candle upwards to her room where she can rest. Secondly he in front of the brother tells the man and Watson that they should get a cab back to London. When they get one the cab Sherlock jumps off the cab when it's leaving telling both Watson and The man not to worry and that he's got a plan. He then waits until nighttime. He anticipates that the brother will try to collect the naval treaty in the main room at exactly 2:00am. So around that time he goes into the main room and intimidates the brother so he runs away. He then can grab

the naval treaty and beforehand he informs Scotland Yard that the brother would be running away from the crime scene at 2:00 am so he gets apprehended.
This strategy has many steps which aren't obvious at first. He tells the wife to be in the room up until 10:00 so that the brother won't try and locate the naval treaty during the day and he does it in secret so the brother doesn't figure out Sherlocks plan. He tells the man he has a plan in order to calm his emotions and not completely lose faith in Sherlock Holmes and he calls Scotland Yard so the brother doesn't get away.
This plan covers a few things like: Locating the naval treaty, catching the thief and keeping the man's mental state in check.
(Planning coverage, short term planning, planning preparation, risk calculation, strategy effectiveness, strategy shielding, strategy efficiency, strategy's foresight, direct manipulation, concealment, strategic deception, persuasion, intimidation, verbal deception, bluffing, Emotional management, anticipation, wild predictions & Abductive reasoning)

locating the letters strategy:

Context: Irene Adler, an unofficial wife of the king of Bohemia, has blackmailed him with letters of them together. Which could ruin His new marriage with another royal family girl & his public reputation.
Preparation: Sherlock disguised himself as a poor Cleaner, who would clean the house near Irene's. From there he could spy on her with ease. From here he'd gather info on everything about her including the fact she has a lawyer. Analysing their behaviour together he could tell they were in love and anticipated they would get married (unofficially). Now he knew that when they get married it would be in secret and have to be married by 6pm. From here he'd followed them until they got to the church at 5:50pm. From here he'd pray in the church when he predicted they would need someone to put the ring on the bride's finger, since there's nobody there he would be chosen to go up. Afterwards he would leave with all knowledge of Irene's secret love life and that she's not someone who won't let the king marry someone else but rather someone who's blackmailing the king for the point of her and her husband. Then the next day he would disguise himself as a clergyman and go towards the actual plan.
Actual plan: first Sherlock anticipated a fight would happen as soon as Irene got out of her carriage. From there Watson would enter the house during the commotion, then he would get involved and make sure to be attacked and be knocked out. He predicted due his psychoanalysis on Irene she is too kind not to let him into the house to let her care about him. From there in his disguise he would act relatively sick so that it would make people open a window for him, then he'd get Watson to throw in a fake fire. This would

make her show where the letters are because people tend to protect important things when danger comes about. This worked and she opened a secret compartment where a button which he infers must be where the latters are. Then all he has to do is leave Irene's house with the knowledge of where the letters are.
Now Irene did see through this plan but she's a genius respected by Sherlock so it's not too surprising and isn't too much of an anti-feat.
(Strategy effectiveness, short term planning, strategy foresight, emotional perception, emotional understanding, emotional engagement, acting skills, Preparation process, indirect manipulation, disguise mastery, logical predictions & anticipation)

•Writing a fake Letter using the dancing men to Abe so he'd come to the mansion and be captured by Sherlock and all the police hiding all over the mansion.
(Tactics, Strategic deception & Setting traps)

Context: A snake is coming through the vents to kill Helen because of the step-fathers plan so to prevent it Sherlock formulates an plan. **Actual strategy:** As soon as Helen's Step father returns She must tell him that she's got a massive headache and needs to go to bed. Then as soon as the step father goes to bed himself, she must go towards the window and place a lamp as a signal to Sherlock and Watson. Then Instantly and as quietly as possible she must go to her old room. To make sure Helen follows Plan B induces an immense amount of fear into her so she doesn't get suspicious about Sherlock and follows his plan perfectly. Then when Helen has gone into the other room Holmes and Watson Enter. Close the blinds and Turn off the lights and wait. When the Snake comes through the ventilator he would hit it with a whip sending it back through the vent and to strangle the step dad. Killing him, This would Keep the Girl safe and eliminate the stepfather. **(Strategy efficiency, strategy execution, strategy effectiveness, short term planning & planning invisibility)**

Anticipation, Predictions, Trap Evision & Being Two steps Ahead:

•Anticipated That a fight would break out exactly when Irene exits her Chariot to try and rob her or get her to give them money.
(Anticipation)

•Anticipated the exact time (2:00am) when the criminal would break into the house because he'd most likely break in at a time when nobody's awake.
(Anticipation)

•Predicted the treaty was in Mr Phelps room
(Wild prediction)

•Predicted that they would need someone to put a ring on the finger at the church.
(Wild prediction)

•Predicted that Irene and her husband would need someone to put the ring on her figure because it was 5:50 when they arrived.
(Logical prediction)

•Predicted Irene would take him into her house due to his psychoanalysis on her being a kind person unlike the king's description.
(Logical prediction)

•Anticipated that Moriarty would get in the train exactly behind them and would follow the train with the luggage
(Anticipation)

•Predicted that the man who said there's a sick woman for Watson is Moriarty and he's trying to isolate Sherlock.
(Wild predictions)

•Anticipated that Watson would look up the at the path to see if Sherlock comes down
(Anticipation)

•He anticipated that Moriarty would eventually locate them in Switzerland and Him and a group of his minions would come but he also anticipated that he would want to fight Sherlock Alone.
(Anticipation)

•Predicated that Moriarty will think they're still on the train to the boat.
(Wild predictions)

•Anticipated that at the mansion a door would be locked so he brought a bunch of lock picks.
(Anticipation)

•By deducing the entirety of the Red league plan he anticipated everything that happens after the red league organisation.
(Anticipation)

•Due to the deduction made on the Speckled band, from this he's able to anticipate the entire method The step father would use too (see reasoning and thinking section for explanation on His plan), kill Helen.
(Anticipation!

Thinking, Reasoning & Detective skills:

•Looked and analysed a hat and the inferences he mad about the owner from it were:

- Due to the size of the hat and on average smart people having bigger heads he's probably smart

- Looking at the Band of Ribbed Silk and the excellent lining. And the Flat Brims with the curled edges came in three years ago. Therefore if he could've afforded such an expensive hat three years ago and hasn't bought a new one then most likely he's had a decline in wealth.

- There are Securers on the hat which are never sold with the hat. This means he ordered one and has a level of foresight and self care with certain situations such as dealing with the wind. But the hat has broken elastic below the Secures which he hasn't bothered to fix showing a slowing deterioration of care.

- His hair is grizzled but has been cut recently and has been using cream. Also the lower part of the lining is full of moisture showing he's a perspirer meaning he's probably middle aged.

- His hat hasn't been brushed for weeks and logically if he had a wife, she wouldn't let him go out in such a state therefore he's been divorced. Now due to external info due to him buying a goose with a letter on the leg he can assume he wanted to buy a peace offering to his wife who was probably about to divorce him.

- He has five candle stains on his hat therefore he must use candles and not have any gas lighting.

- HB is on the bottom of that hat so by the most common names in the country his name is probably Henry baker.

From this he can infer that the owner of the hat is: Relatively smart, decreasing in wealth, bit self care, middle age, divorced, has no gas and is depressed.
(Inductive reasoning, Abductive reasoning, probabilistic reasoning, cold reading, observations, emotional perception, VCi (similarities) , intuition & deductive reasoning)

•Without being able to directly analyse it he was able to observe a man's boots had been recently resoled
(Observations)

•Observed a slight roughing on the side of the shoes souls. This would be caused by friction of the pedals of a Bicycle meaning they ride a bike regularly. Also Observed that the end of fingers are spatulate therefore she must be a professional musician since that's common to professional musicians.
(Logical thinking, linear thinking, convergent thinking, inductive Reasoning, cold reading & knowledge)

•Analysed the Dancing men code. By knowing the name of the person who the code is meant for being "Elsie" and E being the most common letter in the English. You can find

in a part of the code where one of the dancing men showed twice in the same Places of E's are in Elsie. From there he can infer and predict other words in the sentence and use those predictions to predict other words.
(Analogical reasoning, Inductive reasoning, observations, logical thinking, linear thinking, abstract reasoning, VCI & convergent thinking)

•Sherlock Was looking down from a window and saw a man buying some stuff. He is able to notice the man is wearing ammunition boots meaning he's been in the army and is recently discharged since he's still wearing them when he's not training. There's tanning on the skin and since recently many soldiers have gotten back from the war near India he probably has been to India. Now he's doing his own shopping and in the 1880s it was incredibly uncommon for the women in the relationship not to do the shopping so he's probably single. He can also see he's buying a rattle, implying he has a child but also a picture book which would commonly be bought if you had multiple children. Now he has kids and in the 1880s it's practically unheard of for a man to have kids but no wife and plus the fact he looks like he's faking a smile. He's probably a widower and he's mourning his wife who recently passed away. He made all these inferences after literally glancing at the man for a second only.
(Cold reading, observations, perception, Abductive reasoning, inductive reasoning, deductive reasoning, observations, probabilistic reasoning, Emotional perception, social awareness & PSI)

•Was able to hear Watson whisper from all the down the hall
(Perception)

•With knowledge that: Irene is having an affair with A random man, she's blackmailing the king of Bohemia, she's gonna show the letters in a few days and the king describes her personality negatively when she's actually a nice person. He infers the entire Scandal in Bohemia plan (up to when he shows up) in extreme detail (see the Irene Adler section for the explanation of the plan.)
(Deductive reasoning)

•has an info database on seemingly everyone in Europe.
(Info gathering)

•Was able to gather info on everyone Irene talks too. When she goes to have tea, when she leaves her house, when her friends talk to her & other info on her life
(Info gathering)

•Observed there was a bit of scuff on the window sill implying that someone had entered through the window. Despite the evidence against it like The roof being out of reach and no drainpipe being nearby to climb up. Next he Observed a boot marks in the carpet & a smaller dot in the carpet which he infers to be from someone with a wooden pegleg

Comes up with a hypnosis that the man who broke into the room and killed the man had a friend. Since he knows the person has a pegleg this probably means he's not very athletic and the climb through the window & since we know someone climbed through the window to kill the man it has to be a athletic ally. Noticing a rope hiding in the room he reasons that the way he got in to kill him went something like this:

1. He got his ally from the room to throw the stout rope down and secure it to a ring.
2. The pegleg man climbs up the rope and when the victim enters kill him
3. Leave in the same fashion and then have his ally pull the rope up and close the window

Next thing to answer how did Ally get in if not through the window. Since there is a hole in the roof it's easy to assume he climbed through it (even though it was created by somebody else). In the hole in the roof he sees a small footprint which can only be from a child meaning the ally is a child.

(Observations, perception, inductive reasoning, Abductive reasoning, deductive reasoning, logical thinking, critical thinking & linear thinking)

•Sherlock deduces the entire red headed (see Moriarty section) league plan from this information:

- Firstly Vincent's Job request at four pounds a week only a few days before the red league advertisement. Four pounds a week is very poor, so maybe Vincent is connected to the red headed league, maybe to get into the man's Shop while he's out doing a lengthy task. But why would he be in the shop? Well Vincent has an acid splash on his face and Mud on his pants implying he's been on his legs. Maybe digging, since the man's shop is a place to dig from if you were trying to dig into the bank. And the acid splash is associated with the relatively unknown thief John clay.
- But this operation couldn't have been done by clay alone, he's not smart enough and this requires influence. So who better for it to be than Moriarty himself.

(Inductive reasoning, Abductive reasoning, deductive reasoning, logical reasoning, critical thinking, Logical thinking, linear thinking, non-linear thinking & creative thinking)

•Stated that by analysing and observing every single part of a droplet of water can tell if it's from The Atlantic or Niagara.
(Observations & inductive reasoning)

•Inferred Watson had been to Afghanistan. His reasoning was:

1. He has the general clothing of a medical doctor but has the stance and walk of someone who's been in the military , so logically he's a army doctor
2. Big parts of his face were slightly tanned while his ankles, Wrists and hands weren't. This would be because he would be wearing military clothing that would cover all his body but not his face. And since there's been no sunlight for the past week so he's been somewhere tropical
3. He has a haggard Face implying sickness plus his left arm is injured showing he's been in some kind of battle or a situation that causes that sort of injury
4. Recently a war happened in Afghanistan with the British appearing there meaning he's been to Afghanistan.

(Inductive reasoning, probabilistic reasoning, cold reading, observations, Abductive reasoning, deductive reasoning, logical reasoning, logical thinking, linear thinking & convergent thinking)

•Found a cane in his Main living room, from observing it he infers:

1. The cane has dents all over it, it makes no sense for someone in the city to have such a dented cane, where he works in The countryside.
2. It has C. C. H which probably stands for Charing Cross hospital
3. Now the cane has a date on it "1884" since we know his own works at the hospital were probably given to him as a living gift. Looking at a Database of all who worked at that hospital he finds out Mortimer James left around that time meaning it's him.
4. The middle has claw marks on it that seems like it's been there for a while. This probably means he has a dog that's been holding the cane for him in the middle.

(Observations, Cold reading, inductive reasoning, Abductive reasoning, probabilistic reasoning, Logical thinking, linear thinking & convergent thinking)

•Mr McFaelane had come to consult him and In a instant made multiple inferences about him:

1. For the seconds he's been in the room he noticed that The pattern of his breathing was rather similar to one of an asthmatic implying he was one.
2. His overall attire is generally untidy & not from running but rather he purposely made it look like that. This form of attire would never Be accepted by a wife (or girlfriend) in those days meaning he must be a bachelor.

3. There's a sheaf of legal papers in his pockets and a Watch-charm on his arm which would require a level of finance to acquire implying he's a solicitor and a Freemason.

(Observations, cold reading, perception, Pattern recognition, deductive reasoning, Abductive reasoning, inductive reasoning & probabilistic reasoning)

•By analysing Helen as she walked into the room he was Able to infer how she got to Baker Street by:

1. Noticing on the underside of her left arm, her jacket is spattered with a bit of mud which is very fresh. Comparing the pattern of Mud marks to different modes of transport he infers it must've been a dog cart as they usually splash up mud in that particular way especially if she was Going across muddy hills and on the left hand side of the driver.
2. Noticing the second half of the train ticket in the palm of her hand means she probably got on the train to London and then walked to baker street.

(Observations, perception, cold reading, pattern recognition, inductive reasoning, analogical reasoning, analytical thinking, logical thinking, divergent thinking & linear thinking)

•Sherlock had deduced the murder method in the speckled band. The information he had was: The sister Ran out her room screaming the speckled Band and died shortly afterwards, When Sherlock analysed the Room he noticed the bed had been bolted to the floor under its legs (it's very well hidden) and the bed perfectly sits below the Vent, A small Whistling sound could be heard every night but when she checks there's nothing there, the step-father is obsessed with Indian animals and has trained a few of them, the girl is about to be married, when the sister died they couldn't detect any poison on her at all and didn't know how she died & finally The step-fathers chair from detailed observation has been stepped upon.

1. Firstly Sherlock can instantly tell It's the Step-father, He has all the influence to do plus it's natural for a father to want to not lose their daughter to another man and if insane another would kill he daughter.
2. Now the speckled band is probably a snake. You see when the sister died, there was no poison but also barely any marks of violence. Meaning that it must be a poison that hasn't been discovered yet, since the step-father is obsessed with Indian animals so probably a poison from there (probably an animal). What animals would produce Poison? Well a snake, meaning that when the sister screamed "Speckled Band", she was referring to a snake that had bitten her and killed her in seconds.

3. The Step-Fathers chair had been stepped on so he was probably trying to reach something. The vents perhaps. Since the father trains animals it could very easy to train the snake to at night when she falls asleep: slide through the vents, into the sisters room, slide all over her (and potentially bite her), then at the sound of a whistle come back up a rope and then when the sister wakes up if the snake didn't bite it won't kill her.

(Deductive reasoning, Abductive reasoning, inductive reasoning, Analogical reasoning, probabilistic reasoning, Abstract reasoning, concrete Thinking, Divergent thinking, creative thinking, non-linear thinking, critical thinking & lateral thinking)

•Looking at the letter. He notices: the letter has been ripped along a fold considering the sides are slightly uneven but straight, the messages on the letter are cut out from a newspaper, the messages have been awkwardly cut almost as if the person was in a rush and by looking at the cut lines on the paper it was cut with a sharp short bladed scissors plus it's very misaligned, the paper has a small watermark on it similar to one you might find in a hospital, the ink is institutional which is common in a hotel and the last word of the letter is written in pen with pocket fluff on the side. This probably means the person making it was methodical, he planned to conceal his identity while staying at a nearby hotel by writing Henry Baskerville a warning with bits of a Newspapers; then he started to panic, feeling like he was being watched. So he quickly scribbled down the last word and posted it. Judging from this, the letter is a friendly warning and not a threat.

(Observations, perception, deductive reasoning, inductive reasoning, Abductive reasoning, probabilistic reasoning, analogical reasoning, linear thinking, analytical thinking, concrete thinking & logical thinking)

•Firstly Sherlock Noticed a little bit of a clay and chalk mixture upon the toe caps of a man, from this he infers he's from the southwest Britain which is closest to the sea and chalk hills exist. Now his uncle had gotten a message with K. K. K. On it and then couple weeks later seeming committed suicide on march 10 1883, same thing happened to his father on January 1885 where he got a letter with K. K. K. And then a couple weeks later seemingly died from accidental causes and now in august 1887 he's gotten a letter from with K.K. K. On it. He proceeds to die a couple weeks afterwards. All family members have ties to Plantations in America.

1. Now to pull off multiple murders that don't seem like murders (at all) has to mean an organisation or group of people. It can't be one, two or maybe three people as only having a few minds to check the process is bound to leave errors and for multiple perfect murders is very unlikely so a large group of people pulling this off that can all check for potential flaws is more likely.

2. Also we know from the first inference from the toes that he's from southwest of England meaning he's near the sea and most importantly where the ports are meaning that the group of people would realistically be coming from those ports to kill them as If they already shown to know where they live
3. From 1 & 2 you can infer the group is foresign and since all the family members have ties to plantations in America we can assume the organisation is from there, so looking up organisations from America that compares to K. K. K you can find out it's the Ku Klux Klan.
4. A pattern can be spotted with the murders, they all happened weeks after the letter is sent. Now while we know they came in from Southwest England, that is a very big area and not very efficient when tracking them down. Realistically they would've sent the letter before embarking on the voyage across the Atlantic. Now if they came from Pondicherry they would have reached the port around the time of the letter but seven weeks had elapsed, so they must've come from Dundee since the seven weeks probably means the difference between the mail boat and the sailing vessel.

From here he checks every single file containing ships that left or visited Pondicherry, seeing one called the lone star which is similar to many cults at the time which also ties to a group of people like he suspects. After looking more he finds out the lone star matches his inferences perfectly and he can have the ship arrested and the people hanged.

(Deductive reasoning, Inductive reasoning, Abductive reasoning, analogical reasoning, probabilistic reasoning, concrete thinking, logical thinking, convergent thinking, divergent thinking, creative thinking, info gathering, pattern recognition, observations & perception)

Adaptability, Unpredictability & resistances:

•Described that his mind is completely unreadable and predicting his next actions as extensively hard

(Unpredictability)

•Moriarty was unable to Predict any of his plan and thought was completely helpless during the ordeal.
(Unpredictability)

•When Moriarty started hunting him down he Adapted and formulated the plan to solve the Final problem which you can see in the planning section.
(Situational adaptability)

•Adapted to the environment of Switzerland mountains in seconds.
(Environmental adaptability)

•Despite a woman being stated to be "incredibly attractive" Sherlock doesn't let this cloud his judgement of her at all. Same with Irene who is stated to be "the best looking girl in the world" and she would seduce practically any man she had met.
(Resistance to Manipulation)

•Sherlock can't be manipulated through acting skills due to his extreme cold reading which means he'd judge you by your occupation and living standards rather than your personality. Sherlock doesn't even pay much mind to what others say to him unless it's important to the case meaning gaslighting him is impossible. And due to him resisting the effects of a drug that sends you insane insanity inducement doesn't work on him.
(Resistance to manipulation)

Other characters Feats:

Dr John Watson:

•Got a degree of a doctor of medicine in the university of London & an ex-army Surgeon.
(Learning ability, Visual spatial (Being a surgeon requires in-depth visualisation of parts of the human body), academics & knowledge)

•Fought in the Afghan war for an extended period of time and after the war was over he still had a stable mentality. Even though: he had seen many many die, was in extreme physical pain from the war & had an enteric fever.
(Emotional management, stress tolerance + Mental fortitude)

•Became best friends with Sherlock Holmes. A person who barely has any friends and barely tries to make any friends. It's stated Sherlock is a hard man to communicate with, who can spend days not talking to anybody.
(Social skills)

•Inferred that the paper was Expensive because it is strong and stiff and noticed that the handwriting was one of a man.
(Knowledge, observations, verbal compression & inductive reasoning)

•Emotionally understands Sherlock's "love" for Irene which isn't a romantic love but more a love from respect.
(Emotional understanding)

•Noticing That Sherlock is joyful he can infer he has a case
(Emotional perception & Inductive reasoning)

•He tends to become best friends with all of Sherlock's clients despite a lot of them having trust issues or anxiety.
(Social skills)

•From observing the size of the footprint he infers the person is a child.
(Observations & inductive reasoning)

•Was able to keep a stable relationship with his wife despite not seeing her for most of the year.
(Relationship management)

•Persuaded Sherlock to leave Baker Street and visit him and his wife.
(Direct manipulation, persuasion & Logical manipulation)

•Read a card containing 11 words in less than a second.
(PSI)

•Was able to manage his emotions while being hunted down by Moriarty who is a continental level threat and could've killed with ease if he wanted to but showed incredibly little to no signs of nervousness or stress.
(Emotional management, stress tolerance, impulse control, discipline, composure & mental fortitude)

•Anticipated Sherlock would be lounging about his sitting room in a dress gown, reading the times while smoking.
(Anticipation)

•Managed Miss Hunter's Emotions and kept her composed despite her fear and being threatened to be murdered by her boss.
(Emotional management)

•Mr McFaelane had come to consult Sherlock and in less than a second he made multiple inferences about him:

- For the seconds he's been in the room he noticed that The pattern of his breathing was rather similar to one of an asthmatic implying he was one.
- His overall attire is generally untidy & not from running but rather he purposely made it look like that. This form of attire would never Be accepted by a wife (or girlfriend) in those days meaning he must be a bachelor.
- There's a sheaf of legal papers in his pockets and a Watch-charm on his arm which would require a level of finance to acquire implying he's a solicitor and a Freemason.

(WMI, PSI, Observations, perception, cold reading, pattern recognition, deductive reasoning, inductive reasoning & abductive reasoning)

•Lied to the cab driver that Him and Sherlock were Architects coming to look at the local housing.

(Bluffing & verbal deception)

•Has incredible knowledge on Politics and social figures throughout all of Britain, even more than Holmes himself

(Knowledge)

•Spent 24 hours straight reading and studying Chinese pottery, this made him so knowledgeable in the subject that he was comparable to dedicated collectors of Chinese pottery. Also reading this many books on it would give him an incredible vocabulary on the Chinese language.

(Emotional engagement, VCI & Knowledge)

•Every single Sherlock short story and novel was written by Watson as a perfect recount of events. Since it's shown he doesn't ask Holmes for a recount of events this means he remembers: every conversation (every word said in those conversations), the exact look of every crime scene, the exact inferences made, the names of the people involved & exact time details of events throughout the case. Also writing a book requires great vocabulary.

(WMI, VSI & VCI)

Irene Adler

(The Women)

(The Women who outsmarted Sherlock Holmes)

(Bane of Bohemia Royalty)

(The Genius behind the Scandal)

•She's stated to be the world's greatest singer and actor. This would require impressive VCI because she would have to change her voice for the script and use a different pronunciation for each individual word. Plus as a singer writing songs requires an extensive Vocabulary and even better voice control than an Actor. Plus back in the 1880s actors were expected to make their own costumes which required VSI to visualise said costume. Plus she has to memorise scripts.
(WMI, VSI & VCI)

•Seduced the king of Bohemia despite not having any royal connections. She also seduced every single man in her area.
(Direct manipulation, seduction & social skills)

•Is shown to have incredibly good aim With a gun. Can hit a target that is 20+ feet away.
(VSI, due to the visualisation required to aim the path a gun will take)

•Blackmailed the King of Bohemia with photographs of them together. Which if released would ruin his relations with royal families and the public
(Direct manipulation & blackmail)

•Has to handle the stress of the king of Bohemia constantly looking for her and sending people to steal from her. Plus the possibility he might just kill her and she's able to act perfectly normal and not angry or seem stressed at all around her true lover.
(Mental fortitude, stress tolerance, emotional management & acting skill)

•Knows how to play the piano
(Musical intelligence)

•Speaks German & English
(VCI)

•Was able to have a completely secret wedding with nobody (even the king) knowing about it. While making the king think she's absolutely in love with him. This all played a part in her plan.
(Concealment, strategic deception, misdirection & info control)

•Thought of multiple ways of Escaping the king of Bohemia before eventually concluding her current plan is the best one.
(Convergent thinking & divergent thinking)

Irene's a scandal in Bohemia plan:

Context: Irene was in a romantic situation with the Prince (at the time) Of Bohemian. But she had secretly been seeing another man who was far nicer/kinder than The prince and she wanted to break up with them.

Actual plan: She would make sure to take a picture with the prince so she can use it as blackmail. Now she has a psychoanalysis on the prince of being an arrogant narcissist who thinks he's far more attractive than he is. Therefore she made sure to act as if she couldn't leave him and had to get married to him when he was already planning to get married to another royal person. This would make it seem like when she blackmailed the prince it would seem like she did it so she couldn't leave her and get married. This would conceal her true motivative to want to get married to the man she actually loves. Now she's blackmailing the prince to ensure he won't kill her because she knows if he kills her he'll never find the letter. But she also knows that if she broke up normally the king would kill her. She infers the king would kill her if she left because of the psychoanalysis she has on the prince being Narcissistic and wanting people to love him because he thinks he's attractive and that all women should want him no matter what and if they don't they don't deserve life. She also ANTICIPATED EVERY SINGLE WAY the king would try to locate the letters: He'd get people to ransack her house twice, she would be waylaid twice for information and they would intercept her luggage. She told the prince she'd release the letters in a few days, this would make the prince more likely to get married in secret to the actual love of her life. Despite the Prince (who's now a king) having multiple people try to steal her and watch what she's doing. On the Next day Sherlocks plan took place but she was able to tell during Sherlocks plan the clergyman wouldn't ever have such in-depth knowledge on Evil. This is because a Clergyman is a priest and Priests preach about good and hope and all that stuff. Therefore the clergyman consistently telling Irene that the people wanting to rob her are pure evil makes no sense. From this she could infer that it's not a clergyman but someone in disguise. Many months before she was notified that if the king was to consult someone it'd probably be Sherlock. Since She now knows the clergyman is someone in disguise she inferences based on this that the clergy man was Sherlock Holmes. To check her inference was correct she disguised herself as a man and followed the carriage the clergyman was in. Then when the carriage

stopped at a bakerstreet she knew her theory was right. The next day she wrote a letter for Sherlock and left a day before and destroyed the letters & left the country to live a long and happy life with her husband.
(Planning coverage, planning preparation, planning invisibility, long term planning, strategy effectiveness, strategy efficiency, strategy adaptability, strategy execution, strategy foresight, direct manipulation, blackmail, seduction, strategic deception, misdirection, disguise mastery, acting skills, emotional perception, emotional understanding, seeing through people, anticipation, logical prediction Abductive reasoning, inductive reasoning, abstract reasoning, probabilistic reasoning, logical thinking, linear thinking, non-linear thinking, creative thinking, critical thinking and focused thinking)

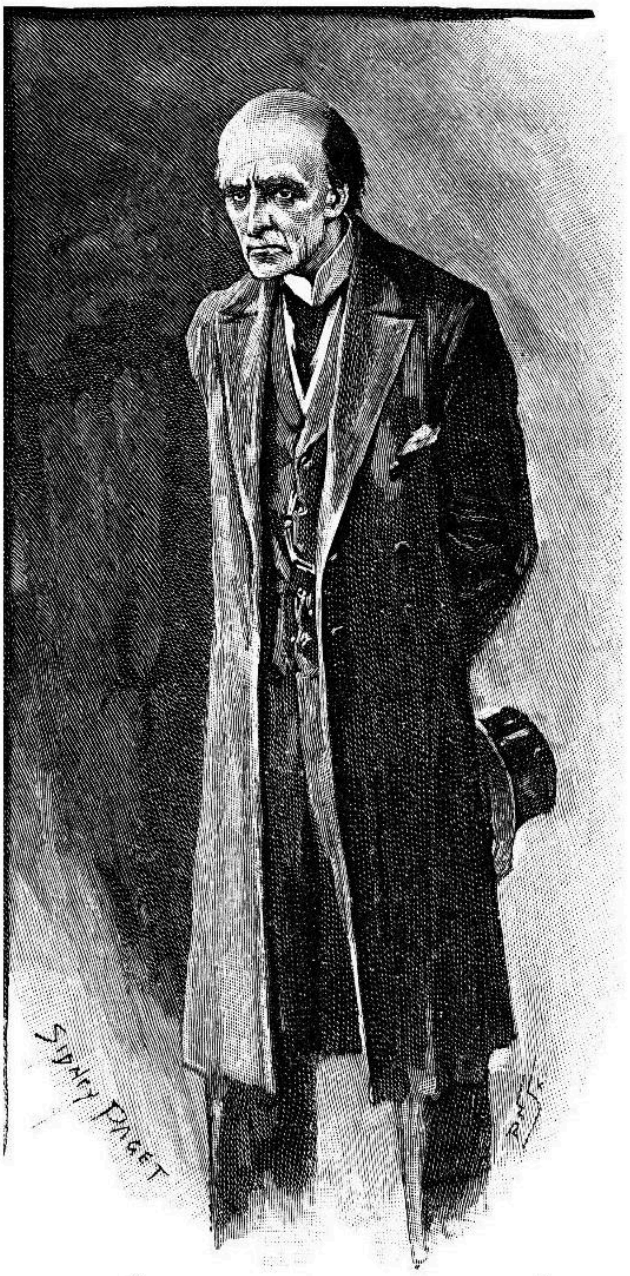

•Predicted that Sherlock had located the letters even though she never opened the compartment they were in and also anticipated that when Sherlock goes to the house the next day he would bring the king.
(Wild predictions and anticipation)

•Reflected on her time with the king and how she had never truly loved him and that getting with someone else was a benefit to her.
(Self awareness and reflective thinking)

•Stated to be the most Beautiful women in the world by Sherlock, who is practically not attracted to anyone else.
(Charisma & seduction)

•Stated to be a genius by Sherlock himself & is further stated to be the only person (other than Moriarty & his brother) to have outsmarted the great detective.
(Narrative intelligence)

Professor James Moriarty:

" PROFESSOR MORIARTY STOOD BEFORE ME."

•Visualised the entire coburg square and St James Hall. Now St James Hall has an area of 24,386ft and Coburg square is about the size of an average street in London.
(Visual spatial)

Red headed league:

•Moriarty wants to Steal a bunch of gold from the nearby bank. The security of the back is too secure to break in. So firstly he manipulates Clay (a known criminal) with the promise of money to become the assistant of Jabez Wilson for two months on end.

Moriarty had also fabricated an entirely new identity for clay called Vincent and made him apply for half wage. To make sure Jabez will hire Clay. Then Moriarty creates an advertisement for red headed people to come work a job for four pounds a week (back in those days it was six hundred pounds a week). He would then get Clay to Persuade Jabez to apply. When he applies he then gets another paid man at the desk to grab his hair and say "we've had a couple fake redheads in here today." This would make It seem more realistic for Jabez so he doesn't doubt it. Then he gets the paid man to tell him a lie that "the league was founded by an American Millionaire, Ezekiah Hopkins, who was very peculiar in his ways. He was himself red-headed and he had great sympathy for all Red-headed men; so much that when he died it was found he had left his enormous fortune in the hand of his trustees, with instructions to apply the interest to the providing of easy berths to men whose hair is that colour." This lie again makes the League seem more realistic. Then as the job he would want him to copy out the encyclopaedia britannica and that he can't leave the building at any time during the job. While he does this Clay from under Jabez' home he's digging with another criminal into the bank from underneath. After eight weeks he wraps up the league and then gets Clay and another Criminal to rob the bank without anybody knowing. Nobody discovered this plan other than Sherlock.

(Planning preparations, short term planning, planning invisibility, strategy effectiveness, strategy execution, strategy alignment, strategy shielding, fabrication, direct manipulation, logical manipulation, verbal deception, identity deception & mass deception)

•Moriarty was highly accomplished in the field of mathematics, with abilities that earned him significant renown and even impressed Holmes. At the age of 21, he published a treatise on the binomial theorem which was lauded throughout Europe and earned him a chair at a provincial university. Moriarty also applied his mathematical faculties to other scientific fields, such as astronomy. His book The Dynamics of an Asteroid, was said by Holmes to "ascend to such rarefied heights of pure mathematics that it is said that there was no man in the scientific press capable of criticising it." He was also very excellent in technology, as he was famous for his technological achievements, although his abilities in technology and achievements in said field are unknown. His ability to publish such renowned books also proved him to be an impressive author.

(Academics, calculations, knowledge, FSIQ, Learning ability & influence building)

•Whenever he's not doing something that's a part of his Criminal organisation he acts like a Humble old man. He's kept this act up for years and years around many many people, even when he's dealing with stressful situations in his job as a consulting criminal, like when he's about to be revealed as a criminal by Sherlock.
(Acting skills, Emotional management, mental fortitude & stress tolerance)

•Speaks French, English and German (maybe Swedish as well but that's not definite.)
(Knowledge & VCI)

•When Sherlock Got the original painting back he was able to instantly adapt and locate Sherlock himself (even when he goes to completely different countries) and send many many assassins after him.
(FRI & situational adaptability)

•Stated by Holmes that he's a Philosopher & an abstract thinker.
(Social understanding, emotional understanding & abstract thinking)

•Moriarty is a consultant in crime with a Continental size Criminal organisation. He would look at people and come up to them and ask them if they want to pay him to commit a crime. To do this he would have to psychoanalyse people to check that they wouldn't rat him out when he comes to offer to them. This could be done by looking at the desperation of the person and so that they'd choose to pay him to commit a crime over following the moral of justice. He would also have to persuade a lot of people to pay him to commit a crime so that he can be paid a lot more. It's stated by Holmes that many crimes that seem to be natural are all probably incredibly complex plans by Moriarty. While it's unknown how complex these strategies are, we do know that they all covered these things: Get the client to pay him, commit the crime, make it seem like an accident and make sure he remains hidden and that the client doesn't tell on him.
(Influence building, emotional engagement, social skills emotional perception, direct manipulation, persuasion, concealment, mass deception, info control, misdirection and all planning & strategy categories)

•Nearly all Criminals in England have complete obedience towards him due to how much he's help them over the years
(Direct manipulation, complete control & mass manipulation)

Mycroft Holmes:

•Stated to be better in Reasoning, observations, perception & General detective skills than Sherlock himself

(All Reasoning categories, all thinking categories, observations, perception, intuition & cold reading)

•Founding member of the Diogenes club. Diogenes is a Greek philosopher who lived for 81-89 years. For him to have founded an entire club around Diogenes he must have an in-depth knowledge of the Greek language.
(Verbal compression & knowledge)

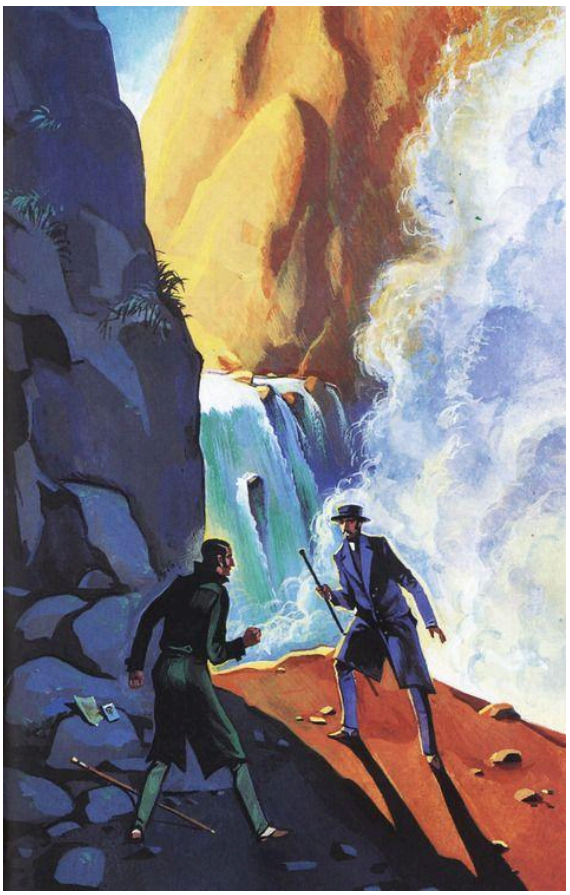

•Mycroft Was looking down from a window and saw a man buying some stuff. He able to notice the man is wearing ammunition boots meaning he's been in the army and is recently discharged since he's still wearing them when he's not training. There's tanning on the skin and since recently many soldiers have gotten back from the war near India he probably been to India. Now he's doing his own shopping and in the 1880s that is incredibly uncommon for the women in the relationship not to do the shopping so he's probably single. He can also see hes buying a rattle, implying he has a child but also a picture book which would commonly be bought if you had multiple children. Now he has kids and in the 1880s it's practically unheard of for a man to have kids but no wife and plus the fact he looks like he's faking a smile. He's probably a widower and he's mourning his wife who recently passed away. He made all these inferences after literally glancing at the man for a second only.
(Cold reading, Adductive reasoning, inductive reasoning, deductive reasoning, observations, probalistic reasoning, Emotional perception, social awareness & PSI)

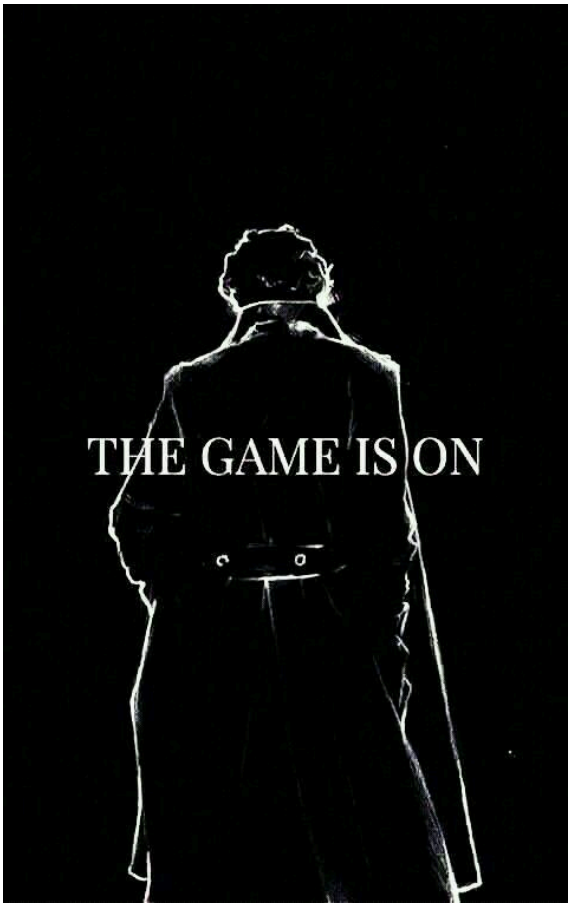

•Stated to have the greatest memory in all of humanity. This means his memory is better than Sherlock himself who has a mind palace storing more knowledge than most humans have in their entire lives in his memory. This is shown when he remembers all information about the governments about EVERY COUNTRY IN THE WORLD (from Europe to North America). This includes: military (every gun and stuff the military uses), secrets, negotiations, ways of running the country and basically everything. He has so much knowledge on all the governments that Sherlock says he has "omniscience". Implying he has more knowledge than Sherlock himself. This can count as VCI & VSI because this would mean he remembers the visual designs for every single weapon (vehicle, Gun, bomb and practically everything) meaning he can visualise all the designs for all these. Also to know all the information about all these governments means he has to speak the language for all these countries. Meaning he speaks at least 24 languages (it could be 200 languages but that seems like a high ball).

(All forms of Memory, VCI, Knowledge & VSI)
