OREKI HOTAROU CPI FEAT

MADE BY: @gensolos and @n-ice

- On ***Hyouka Ep10 (13:29)*** Oreki basically was trying to find all clues and seeing through what happened on that video, who was the killer etc.
- To do so, he was walking through the imaginary walking space (VSI), where he stored all of the moments from the film's which were constantly getting replayed in different parts in his head simultaneously (PSI+WMI), for him to use Logical Reasoning on it and find the pattern + connect the dots (FRI)

- **<u>While doing so, he actually had 4 different dimensions of sorts which he visualised in his head. At the same time there's many hundreds monitors in the 1st and 4th one's. And at least tens if not hundreds as well in 2nd and 3rd.</u>**
- **<u>As we see each of them has different images as well from different times and events in the movie.</u>**

Making this an insane and amazing CPI feat and also absurd VSI.
