This document is a variation of Sahej Lelouch Doc
But it covers all the additional material not present in Sahej Doc

Akito the Exile:

Context Since no one watched this show. This show takes place during the time skip between seasons 1 and 2. During this point, the emperor uses his Geass to make Lelouch serve him as a general on the European front.

Deception, Mass Manipulation, Charisma, bluffing Strategic thinking, Fabrication, Info Control.

During Episode 3 Lelouch causes a blackout across the EU before transmitting a video to everyone where he claims to be part of the “Ark fleet” which is an organization made to ensure the liberation of anyone who is oppressed he then showcases a video of a supposed major bombing of an energy plant and claims that unless people ``change their ways” the same will happen to Paris. (This is all a lie that he made up)

This results in uprisings across the entire EU and major sections of major cities are burned to the ground.

Lelouch then additionally spreads fake news of terrorist attacks and the nobles fleeing the country throughout the EU which further fuels the riots.

These Riots then additionally result in EU soldiers deserting the army which allows Britannia to gain a further advantage in the war.

Abduction, Short term planning.

Context: Once the EU is in a weakened state due to the feat previously outlined Lelouch tells the noble at the head of the Britannia military (for this area) to march all his forces. The noble then refuses because he believes that it will cause too many civilian casualties.

Lelouch then immediately figures out that the noble is lying and isn’t following Lelouch instructions because the noble seeks to rebel against the emperor.

Also, Lelouch had planned all of this ahead of time meaning that he knew that the noble wanted to betray the emperor even before this and set up the whole situation so that he could make sure that the noble couldn’t oppose any of his actions and commands.

Abduction, Illogical Thinking, Emotional Perception, and Cold Reading

Context: Lelouch is playing a chess match against a noble.

Lelouch is capable of abducting that the noble did not sacrifice his queen despite it being a move that leads to the noble winning because the noble is incapable of sacrificing some pieces in the real world war and so he projects this same fact onto the chess board which is why he did not sacrifice his queen. Through this, he gains an advanced understanding of that noble's emotions and his weaknesses in war because of those emotions (In this case an inability to sacrifice a piece).

Lelouch of the Resurrection.

(Quick side note, some people think this movie is not canon but based on what the author has said it seems that there are 2 equally canonical timelines in code geass, one where this movie does happen and one where it doesn't, kinda like how the DBS manga and anime are equally cannon just part of different continuities. So you can use these feats to scale “cannon’ Lelouch). Also even if you disagree with all of that it’s still canon to the movie timeline which is still just as canon as the TV show timeline.

Context: Lelouch has been dead ever since the 0 Requiem but CC managed to bring him back by infiltrating a Zilhhistan prison. After Lelouch gets revived he has no clue what's going on since his last memory would be of dying.

PSI

Lelouch learns everything that he needs to know about Zilkhistan and the situation that they are in within a very short amount of time.

Deduction

Lelouch identifies that the country of Zilkhistan has some level of internal/border disputes based on the operation to surrender the prison that he is trying to escape from being switched from the prison guard to the royal guard.

Deduction.

Lelouch is capable of figuring out that the enemy won’t be brash with an attack because they don’t wish to kill Zero (Suzaku).

Direct Manipulation and Short term planning.

Lelouch angered the commander of the royal guard so that he would personally push into the prison from the bottom floor (Which is where the commander thought Lelouch was).

PSI and WMI

Once the royal guard pushes into the prison, Lelouch geasses a bunch of people and then starts commanding about 30 people individually giving them each specific commands on how to best deal with the enemy while baiting them into the prison. (This also means that at all times he knows exactly where each unit is and where the enemy force is)

Short-Term Planning.

Lelouch baits most of the royal guards (Including their commander) to the bottom of the prison while destroying and weakening the prison structure. Then once they reach the bottom floor and believe they have surrounded Lelouch he blows up a bomb destroying basically the entire royal guard.

Emotional Management, Self Awareness and Metacognition

Lelouch is aware that by his own philosophy, he no longer has a right to affect the world and he only chooses to make a difference to save those who do have the right to continue improving the world.

Empathy And Emotional Perception

Lelouch understands Corneilia's anger with him and even tells her that she is justified in her anger but he pleads with her and appeals to her love of Euphy and relates it to Nunnally to convince COrneilia to help him rescue Nunnally. (Some of this is in the sub-text and isn't stated)

Strategy Success Rate

Lelouch tells Cornelia that his plan to rescue Nunnally has a 100% chance of succeeding (He is correct)

PRI and VSI

Lelouch studies the maps of Zilkhistan overnight and is capable of thinking of identifying the weak points that he needs to destroy/access to cripple their military for the rescue mission.

Short-Term Planning and Strategic Thinking

(Basically, the rest of the doc falls under this category)

Also, the following operation has some examples of **FSIQ, Predictions, Anticipation, Overall Planning, Tactics, and Leadership**.

Most of these are not being pointed out unless there is a major example of them but they are in the doc it's just that they are usually minor (Unless specifically mentioned).

Context: If everything I say from now on feels like it won't add up in a normal plot that is because the opponent Lelouch is up against can reset time by 6 hours (the trigger is her death) and that's how they predict his strategies over and over. So if at any point stuff gets really confusing that's why. (Also if not for this power every single one of

the strategies that are briefly mentioned throughout the following section would have perfectly succeeded)

Lelouch uses his Geass to cause both uprisings and jamming of communications throughout the capital so that the infiltration can progress smoothly.

Misdirection, Anticipation, and Strategic Thinking

1. Lelouch had Corneilias Flank deploy Nightmares to keep the enemies off balance and to further in the confusion caused by his geass. He then Anticipated that the enemies response to Corneilas attack would allow Sayoko squad to pin point Nunnallys Location which would then allow him to move in a rescue her.

2. Lelouch positioned Suzaku and Kallen as distractions in the place where the Zilkhistan military throught Lelouch's main force would be attacking from. This ment that the ZIlkhistan Milltary focused it's forces on Lelouch's diversion and allowed Lelouchs real main force to have an easier time infiltrating the Capital.

3. Lelouch Additionally Sent Anya to guard and plant explosives in the sea surronding the capital which would prevent any naval reinforments or an attempt to attack Lelouchs flank through the sea.

Deduction and Intuition

When Back up energy is re wired to the temple lelouch figures out that Nunnally is in the Temple.

Strategic Thinking and Deduction

Lelouch Immeditaly figures out that the enemy has a geass and makes a list of the possible powers that his opponent could have that allows them to predict his plan and then finds the best strategies to narrow down that list. He then makes multiple plans and asks CC to choose and execute one so that he can figure out if his opponent's power is to read minds (This could also be considered Info Control)

Miss Direction, and Info Control

Since Lelouch lost communication with many of his forces he broadcasts on an open channel that their operation is entering its "Final stage", however, this is a lie as no final

stage exists and he only says it to confuse the enemy. This allows his forces a chance to re-group.

Deduction

Lelouch figures out that his opponent's geass power can not be one that interacts with Lelouch or anyone on his side directly as even when only CC knew the entire plan they could still counter it.

Strategic Thinking

Lelouch cuts off the power from the whole city and this basically paralyzes their military.

Deduction

Lelouch deduces that whoever the geass user is they are in possession of power since they quickly mobilize the military to counter his plans. He only finds out it's not the king due to him being focused on battling Suzaku.

Deduction

Lelouch deduces that one of the counters made to his plans could only have been done recently, giving him a more in-depth clue as to how his opponent's geass works.

Deduction, Strategic thinking, FSIQ (Mainly PSI and WMI), Self Regulation and Short-Term Planning

1. In a Decently short period of time (Less than half an Hour) Lelouch makes a strategy to rescue Nunnally, executes it, and then when they counter it he deduces his opponent's geass down to 22 possibilities. (Strategy Used here not specified but all of the strategies he uses in this section had to each be effective enough to complete the mission and they only failed because of the geass of his opponent.)
2. He then narrows it down to 17 (Once more unspecified)
3. Then Lelouch uses a strategy that focuses around an explosion to narrow it down to 16
4. His strategy to narrow it down to 12 is also not specified
5. He uses a strategy that focuses on something to do with an explosion in water which brings it down to 8, (this one also narrows down who the geass user is to the queen and her advisors).
6. After that he narrows it down to 3 (This one allows him to deduce that the queen is the one with the geass)
7. Then through his final strategy he narrows it down to 2, this plan mainly focuses on hacking. This all means that he thought up and executed 7 strategies in less than an hour, genuinely have no clue how he even managed to do all that in such a short period of time.

(I know it may seem confusing that we know nothing to very little about the strategies he uses here but they are something that deffnitaly happened in the movie and based off

the fact that each of them resulted in a time reset by the enemy we can be sure that they were each capable of completing the enemy mission if not for the enemies geass)

Deduction

Lelouch identifies that the queen is trying to use Nunnally as a way to gain access to C's world.

Individual Manipulation, Deception, Deduction and Bluffing

Lelouch locates and confronts the queen, he then finds the best way to push her into a corner by saying that they have the same geass. This then pressures the queen and causes her to tell her guards to surround him but capture Lelouch alive. Her saying this allows lelouch to finally figure out exactly what her geass is.

Lelouch then uses the guards he had geassad to capture the queen and then uses his own geass to knock her out, he then kills her 10 hours after so that when her geass activates and sends back in time she will be unconscious

Emotional Management and Self Awareness

When the queen tries to tempt Lelouch by telling him about how great the power to go back in time and change his mistakes is, Lelouch shows self-awareness by countering that the past is what makes him Lelouch and without it, he wouldn't be the same person.

Empathy and Emotional Perception

Lelouch understands that CC feels isolated from everyone else and how she bareilly feels human, and since he wants to further empathize with her and make her feel more welcome with him he decides to start calling himself LL
