Minoru

Intelligence - Narrative. Stated to be the most intelligent High School student in 2013. Also Stated those to be IQ ones

IQ of 142

EU, Critical Thinking, Analysis.
He says to himself how measuring Intelligence based on IQ is pointless, as the actual smart people are the ones who will solve important issues in the future. Those who achieve high IQ are the ones who like those tests.

He says he's good at problem-solving

Risk-Calculation - Doesn't trust first Ryuk statement that he can only see him when touched the DN

VCI Antifeat - Doesn't know English LOL

He asked for details about Kira case to Ryuk - Info gathering, info control.

Fluid Intel - He has no problems when explained the memory loss plan of Light.

Logical Reasoning, Knowledge, Observation - State that how techonology and cameras are more advanced now. Light couldn't have killed Raye with these conditions nowadays. Same with the Internet and spreaded messages.

EP - Gets how Ryuk wants him to do the same as Light did, trying to make him another Kira.

Abductive Reasoning, Logical Reasoning, Perception, prediction. Ponders if he gives the DN back he'll lose memories and Ryuk most likely would give it to another person, which would be potentially dangerous.

Strategy - Risk-Calculation, contingency, complexity, execution. Asks for people who can still see Ryuk. And the distance Ryuk can be away from him. Distance being 15km, since Sakura is at 11km from his house.

CPI - He calculates / calls back how much far away is Sakura TV from his house so Ryuk distance can work for his plan.

Planning - Aim, Length, Coverage. Anticipation. Formulation Speed, LTP, After all questions needed done, he tells Ryuk he wants to get back the DN 2 years from now.

Manipulation - Tells Ryuk if he can't wait he doesn't mind the DN given to someone else.

Planning - Wants to sell the DN using Ryuk to spread the message in Sakura TV.

STOP - My first problem with this plan, its using fucking paper and pen. So if any1 can take that from the invisible Ryuk, which cannot do anything to other humans that havent touched the DN. He can get localized by his fingerprints. Since he wrote it, not Ryuk

This is really stupid

RYUK DROPS THE PAPER RIGHT THERE. IT CAN LITERALLY BE USED TO TRACK DOWN MINORU. IT'S NOT STATED ANYWHERE HE USED GLOVES SO HIS FINGERPRINTS HAVE TO BE IN THERE.

Near goes in a right track of reasoning to easily catch him, he has touched the DN so he can see Ryuk, if he watches the records of all Sakura TV and surroundings cams with his proven MH he'll catch Ryuk, and therefore Minoru. But he says he hasn't done any crime so he doesn't. This is more a lack of EE of Near than Minoru Strategy working.

Strategy complexity - Uses the fact Ryuk travels underground to basically spawn in Sakura TV to Minoru's house and vice versa.

Near could've solved this by taking the damn paper Ryuk throws to the ground and either track the fingerprints or see Minoru's handwriting and check on students, knowing the track Light got the DN in this time. Near could've read that it was a student again, students close to Sakura TV, Near could've even gone further and think it was a chosen, smart one. And catch him. SMH

Concealment, EM, Acting - Minoru doesn't get involved into any conversation regarding the auction of the DN of his classmates.

Matsuda gets to the damn Sakura TV and doesn’t catch the paper smh.

Near - EU and Cold Reading, Near thinks that if A-Kira wanted it to, he could have used the DN to get money by manipulating peoples actions and dirty moves. However he doesnt, saying he prob values human life more than his desire for money, he probably was a person who found / was chosen and obliged to make something to get rid of it. Which is confirmed in the last part where Minoru states he doesnt want to be close to this notebook ever again.

Planning coverage - He closes the auction in time for 24h before the Japanese bank closes at Friday. He orders the US to divide the money into every account made in Yotsuba Bank in the main part of Tokio and with an age gap.

SE - He gets it from twitter hashtag and using the TV signal on his phone. ig

Near states he got outsmarted smh…

Foresight Antifeat - Apparently no one cares not even Minoru nor The Author on how the economy of a country works. Everyone getting that much money would have made the Japanese coin worthless, leading to a crisis.
