Yuuichi Katagiri

1st series before game start

Logical reasoning/fri:

When Yuichi saw that the letters came to all his friends on his behalf and to him on behalf of savaragi, he came to the logical conclusion that someone decided to bring them together and cheated.After they answered the third question incorrectly.Yuichi logically assumed that one of his friends holds a grudge against everyone.Logical reasoning is a part of fri.

Memory/Deductive/fri :

When Yuichi was hit with a shocker, he passed out and in a dream remembered old memories from his childhood where Shiba Taizen told him that the most important thing in the world was money and where his mother told him that there was something more important in the world than money and she didn't have time to tell him and he woke up.And he remembered shibe's request that he ask savaragi to forgive him and savaragi's words about Yuichi telling a secret to Shibe.

When Yuichi found out that the initial payment for the friends' game was 10% of the amount owed, that is, 20000000, he realized that the person who stole the money was among them since 2000000 was the amount they collected for the trip.

Deductive is a part of fri.

Acting skills/Deception :

He pretended that he liked the fact that his friends did not want to know whose debt it was and no one realized that he was using his acting skills also deceived manaba by saying that friends are more important than money, although he did it himself so that they would not turn away from him.

Running speed/travel speed:

Runned from his house to school in a few minutes.

1st series after game start

Abductive/fri :

When Yuichi's friends answered the questions 1 and 2 wrong.He came to the conclusion that they would definitely have answered correctly if there was no traitor among them.But he don’t know motives of betrayer.Abductive is a part of fri.

Inductive/Abductive/Logical reasoning/Fri:

When Yuichi received the card in order to read the question, he saw that there was no question there, but there was a condition if the answer was yes, the game would end if the answer was no, his debt would be reduced and came to the conclusion that others had this question and they answered no on purpose and wanted to throw off the debt to kokorogi.Logical reasoning,inductive,abductive is a part of fri.

Memory/wmi:

He remembered the time when he was last with kokorogi.It is very weak memory feat.Memory is a part of wmi.

Humanity:

He decided to help kokorogi and free her from all debt.

Logical reasoning/rational thinking/fri:

Yuichi pondered and understood.If he chose yes, then someone from the bottom always chooses no and came to the conclusion that this is the same person and that before that all the guys who asked the question chose the correct answer except one.Rational thinking is close to logical reasoning.Logical reasoning is a part of fri.

Critical thinking/deception/direct manipulation/effective manipulation/logical manipulation/logical reasoning/improvisation/creativity/faster thinking/formulation speed/associative thinking/application thinking/psi/fri/intuition/prediction/bluffing/verbal deception/strategical deception/gaslighting/persuasion :
Yuichi, with the help of his intuition, predicts that someone from the bottom would still answer no, and before that he spoke and said that he had a different condition on the card than everyone else, he had a penalty written for the last place, that is, it was mentioned earlier that if they could not win the game, the debt would go to the person the one with the largest debt changes and now the fine will go to the person with the least debt,but it was a very plausible bluff and verbal deception and strategical deception too because he did it for his strategy assumption.It was such a good deception that all three looked at him in surprise and believed that he said the truth was because of his conversation tone + he did it all with creativity a fter all, not every person would do it with such strange but effective methods.And he formulated it in 15-30 seconds.Associative thinking is near to creative thinking and he have creative thinking feat in the 1st series.Application thinking-process of applying knowledge,skills or concepts to real-world situations or practical contexts,Yuuichi used application thinking in his manipulation skills which he found in childhood and he used in real-workd situation in the case in Tomodachi Game.Formulation speed and Faster thinking are parts of psi.Logical reasoning is a part of fri Fr.Gaslighting - form of psychological manipulation and emotional abuse.Yuuichi used psychological manipulation and emotional abuse in his speech,when he talk about his card another rules.Persuaded all his friends thinking that he I said truth when he said about his card.
Stp/Cold reading/Mind reading/Unpredictable/Guesswork :
Seeing through and read Sawaragi,Tenji and Shibe and their minds.All of his friends can’t predict that he will talk about Sawaragi’s underwear and about it color.Guesswerked what was written on Shibe,Sawaragi and Tenji’s cards.
Logical manipulation:
He used the expression "do you know what color savaragi's underwear is?"
Emotional engagement/emotional management/composure/empathy/motivation/eq:
Yuichi used his emotions effectively when he reported that, that is, he lied about what was written on his card.He show acting skills which is part of emotional management + he showed composure (When he reasoned that one of his friends was a traitor, he did not allow emotions to interfere and remained cold-blooded).He has empathy to kokorogi.He was motivated to know who is betrayed him and his other friends and I do him more confident (Without this confidence, he would hardly have dared to deceive friends with the case with what is written on his card).Emotional engagement and management are parts of eq.
Emotional manipulation/psychological attack/verbal reasoning/nonverbal reasoning:
Manipulated Sawaragi Tenji and Shibe emotions.
And after the manipulations, he said the phrase ‘we are all friends, I trust you all’, thereby making the last warning on the faces of Tenji Sawaragi and Shibe, it was possible to understand that they were psychologically omitted, but even tsukine said that this warning was a psychological attack.He showed an excellent ability to reason verbal when he lied to them about what was on his card and an excellent ability to reason nonverbal when he was thinking in his mind and did not open his mouth, as it should have been according to the rules of the first game, because it was not reasoning verbally that he came to the conclusion

that someone on purpose always presses the wrong answer and that there is only one traitor that will eventually turn out to be true

Anticipation/prediction/intuition/cunning/fri/information control:

He prevented the loss of his team with his deception about his card and everyone believed him and avoided relegation.With the help of his intuition, he prevented the team from losing + predicted that Shiho, Shibe and Tenji had the same thing drawn on the map as him.Cunning - he deceived his friends for winning.Prediction and anticipation are parts of fri.When Yuichi came to the conclusion that Tenji,Sawaragi and Shibe, the cards were written about what if you answer yes-the game will end,no - their debt is reduced twice and at the final loss all debt goes to the last person.Before starting his speech about savaragi underwear he analyzed it and used in speech quote : , guys don't want to know what color of Sawaragi underwear,no, because you so try to cut your debt and throw on the last player' in the end he used this information for his manipulations and Bluffs and awe of fear in Tenji,Shibe and Sawaragi and it worked.This says that Yuichi knows how to control the information in his hands well.

Short-term planning/short-term strategy/strategy efficiency/strategy aim/planning aim/strategy SUCESS rate/faster thinking/harder to counter/tactics:

I'll start with the fact that Yuichi's aims and strategies and plan in the first game were refuted and he managed to win the first game and his strategy gave efficiency.Strategy sucess rate - Yuichi tried very hard on his speech and this speech gave him almost 100% accuracy strategy,because his speech sounds very plausible but his speech is a lie and it not only sounds believable in the anime itself shows that Tenji,Shibe and Sawaragi believe it all 100%.Short-term planning,strategy- he planned all his words the time when he would say and the strategy of this very small plan in a matter of seconds.His strategy in the first game is difficult to overcome because he can tell the truth and lie and he speaks in such a tone that it sounds very improbable plus he makes manipulations during his conversation.And it was effective tactic which includes: short-term planning,strategy,strategy aim,planning aim,strategy efficiency,manipulation:

logical,effective,emotional,pure,direct,psychological,deception,cunning,group,reasoning: verbal,nonverbal,logical,thinking: critical,faster,rational,associative thinking,application thinking,improvisation,cold reading,mind reading,unpredictable,creativity.
