'/' means 'or'
{} means thinking or wondering
[“”] means this is a message posted on the website
Untrackable means untraceable(sorry, I mispelled everywhere)

The 'Qua-binu-nation strait'(derived from ancient names of those countries) containing deep blue waters connected the countries QAE & Bonu. Bonu had the best quality oil reserves than all of middle-east. QAE was the current super power, its military bases, embassies, ships and airforce all over different countries of the globe. Naturally, the strong wanted more.

President Sipu of QAE was a non peaceful man; he was a terrible, greedy and erratic boy. To steal Bonu’s wealth, he invented the "W-Tax"(Water Tax). He claimed Bonu's heavy, low-quality oil tankers caused destructive waves in QAE’s ports. This blatantly broke the global zero-tariff treaty.

(but this is a mere simple, evil Sipu's method to earn extra money, being a super power currently. there’s universal rule signed that, 0-tariff/tax/extra revenue will be imposed on import/export of oil(even if it causes any additional problems while porting the ships).)

Prime Minister Eno of Bonu refused to pay. He stood firm, tried to ignore the troubles protecting his nation's pride and resources.

But Sipu was ruthless. To force Bonu into a corner, QAE publicly declared on twitter.com (bluffed internationally) that Bonu was secretly trading "weapons of mass destruction" without being a known 'Nuclear Power'country.

the oceans remained calm, but everyone knew truth was dead. a terrifying war was coming.

in the shadows, the country of Popom watched the conflict. Its Prime Minister, Papu, was too, a selfish, wicked man(both sipu and papu were strategic allies/trading partners but popom was still in developing state and it's also obvious they are friends only on media, actually, why they both would trust others? its's obvious, one can trust nobody in Geopolitics). He, just like any normal person, cannot simply deny the bluff of "weapons of mass destruction", wanted to know about truth very badly, like what if our government and military got some other important(dangerous or useful, any) information? , but he too was seeking the truth just for power bcz obviously it's the best time to change Bonu's leader/government .

well, isnt it obvious? if Bonu has potential to stand erect during such a serious situation and is able to defend well(even if he gets help from other countries), it does mean that Bonu has powerful weapons .

It's very obvious that other countries will try to help Bonu from behind if it has powerful weapons for war, think yourself.

Papu ordered his top spy, the super genius Peppa Pig, code name P5 (5letters of 'Peppa Pig spy'), and, Lucky, code name L2(based on his one connection and various missions for it in the past), to infiltrate the battlefield.

Peppa is 5yr old nursery student as a fake identity and a 1.5yr experience Double-agent as a real identity (field agent of Popom, and, the right hand of information-handler of QAE). Uncle Lucky is an Information Handler of Popom and has numerous underground, mafia and terrorist connections in the world, mostly in the middle-east, bcz Lucky is very old, super-experienced agent(30yrs), he's 38yrs old.

both dont know each other's real names and fake names either, they know only code names. they dont even share every(unrelated) information to their allies. (like ,if a spy got caught, he cannot expose his ally easily)

L2 told her,"i have high experiecne and u have high intelligence, good combo, i have got connections underground, groups, mafias, terrorists too, it will help u okay... also remember, the biggest, greatest, most profitable business in the world is 'Business of Terrorists'... also, remember, an experienced hitman can tell, how many living beings have passed the whole night from near him while he was sleeping in that forest, i have that ability."

well, the target of a spy is not a only one person, a terrible group of smugglers, or a military general, the target of only one spy is the whole country.
The death of only one spy is enough to crumble the entire relations between the two countries.
If a spy of a country gets in danger or is captured, the country intentionally rejects the spy as their belongingness, u can understand why.

P5 has already once single-handedly changed the government of a whole industrialised country in just 1 year, in the past, when she was 3yrs and 8months old. actually, she was given only 2-3months of intense training. now she's 5.

P5 did not want to do this bad mission. Except some,Her own comrades in the Popom Bureau did not wanted to do the mission either; there was extreme poverty in their country Bonu, 4yrs ago.

well obviously, P5 wonders,{well, it's obviious that i cant even trust my own comrades but could use them, like, if i want any of them to do some work giving a false reason, they will

not suspect me much. hmmm, ok, I cant trust anyone nor anyone trusts me or others either. huh..ahmmm....ghhhh... okeey dokey , now my main mission is to torture/kill the selfish leaders too badly, those Papu and especially Sipu guy...okeeyy}.

{First of all ,I should create some insurance for me, okeyy...I will create a website where we can send text messages, I will give the website link to only those of our bureau members, whom I want to use for my mission..}

~~~(completely non-technical-basic terms/names ahead…believe me readers&judges)~~~

{Well maybe no one will leak this website address for safety issues(bcz L2 said, I'm smarter than him)...and also, the website cant be hacked either because to hack it, local-independent hackers(black hat hackers) will need the website address which very likely will not be leaked....}

{ahmm, I will put no login/register system, but our (numerical)ip adresses can be seen and tracked by the users of that website and likely anyone in the middle-east(eg.,police and govt officials), so, for this we can use vpn as it encrypts the messages into codes so easily transport them through the physical internet without being seen, but it would be costly, so cant use this method…}

{ahmm…yes, to prevent 'anyone'(even those who will use the website) from tracking me or each other, we will always use different ip addresses, we will also write our names in the messages like "pls come to restaurant by 7 pm, I'm Daisy" or something like that, also its not necessary that we will write names during messaging bcz we can identify who sent this using some basic deductions, like,L2 is at prison and message is"pls come to restaurant by 7pm",it definitely means some other guy did this…}

{Okee…well…it's still trackable bcz the telecom providers will save all message logs(like date, time, the ip address itself) automatically through their core network infrastructure (when we using mobile), and a cop with warrant can access these.}

identifiers – ip addresses, mac addresses, phone number, IMSI, IMEI
primary networks- cellular networks(2g, 4g, 5g), Wi-Fi, ethernet cables
other networks – dns, vpn, etc.
primary logger – telecom carrier, ISP, website's server

{our phones communicate via radio waves with local cell towers using the SIM cards they contain. We cant get rid of MSC (Mobile Switching center, msc routes messages using cell tower, it saves every single message, call, identifier, time, date, location log), IMSI (international mobile subscriber identity, unique15digit number provisioned on SIM that identifies the cellular device to cellular network), IMEI (international mobile equipment identity, unique 15digit code on every cellular device eg., mobile), telecom providers and cell towers like things present in the mobile. Even if We are using a website for messaging through cellular devices, then still the telecom provider uses cell towers, IMSI, IMEI(and tracks logs too) but the MSC is bypassed(so, atleast no logs saved).}

{That's why, not gonna use cellular devices like mobile phones, we'll use laptops (non-cellular), 1st, identifiers: we will use computers which will have only IP address and
~~~

MAC address as the identifiers, 2nd, other networks: we will not use any vpn for now, actually, no need (well, I do have a method to get large amount of money from the QAE's bureau of their own will…later will use it).}

{3rd, primary networks:We will use wifi or ethernet cables as our primary network, Ethernet cables are just physical wires so cant be tracked, and wifi too bypasses cellular carrier's network and their msc, and it doesn't even use imsi or imei bcz Wifi chips don't read SIM cards and relies entirely on MAC address, lmaoo…khikhi… wifi will only save date, time, duration, and ip addresses, and also its not even the problem bcz we will be using different ip addresses whenever we will upload message in the website. also wifi doesn't saves the content of chat or location..}

{4th, primary logger: here we will be using website's server, and additionally HTTPS protocol and FTP-file transfer protocol(not SMTP) bcz ftp will keep format of messages in file format pdf, csv,docx, jar, etc. and these file formats will also provide built-in encryption features. Even if there is a skilled tracker who somehow gets access to see the msgs travelling, he will only see a file(which has built-in encryption too) travelling on the route… lmao, okhheeey..noo distraction… last thing, the ISPs, what they will see is just a securely wrapped small data packet, totally unsuspicious bcz of the small size of the packet, they cant even see what's the format(pdf, docx, jpg, jar,csv, etc.) of the data packet travelling… but this is what, isp does save : router's ip address(let router=wifi, isp will see wifi's mac address ; remember, wifi not depend on cellular network, msc, etc.), date, time, the amount of data transferred, and lastly the website address visited…huh, ISPs can see the visited website's address, it's the one last thing I need to bypass… and this is what P5's website's server will save: ip address of device/node, content of data transferred(those messages I was talking about), and the date & time of message…our website's server and not even the ISP can see location. Ok…}

{ISPs can see your visited website address, to bypass this last thing, I need to introduce a node, now this is what our current path/circuit looks like: agent's laptop-->isp-->node-->website. so, what isp will see&save now: router's ip address, date,time, and node's ip address; this time isp isn't in contact with website, it's in contact with the node, so,now isp will see the node's ip address not the website address, khikhi…and isp don't even know that they're actually connected to a node…khikhikhi}

{well, I could have used onion-type protocol to make it untraceable but onion routing will be costlier and will require more than just one of my nodes (to make variable path), well my path/circuit is no different}

{well, I think my one node is enough and so, no need to make the path relative/variable for the data packets to travel. This is our current path to website: agent's laptop--> isp-->node -->website.}

{khi khikhi….all problems are just good as solved}

Then At a children's park, P5 gave the website address to L2 and Daisy(code name of another spy in her bureau, age: unknown; after the post-war analysis in a country, her forensic age came out to be 135years because, long ago, she single-handedly ignited a civil war, faked identities&information to replace a military colonel, and embedded her own agents into the hostile HQ. Post-war, she massacred numerous targets, faked her death, and vanished as the sole survivor, leaving her compromised network to be captured or killed….)

P5 also tells them,"ig it's enough, just according to the game theory example:'we require atleast three groups or more to take the best decision like getting a traitor(within the groups) out, if less than three groups eg; two groups, then both groups will continue fighting and cant take proper decision of who the traitor is within the groups', two groups will cause a deadlock: 'with only two groups, reaching a correct decision about a traitor is mathematically impossible (e.g., grp A accuses group B of having a traitor and vice versa, there is no neutral third party to break the tie, outcome is both continue fighting indefinitely)'…so now, we already have a pre-existing stable balanced foundation of three groups(P5, L2, Daisy)… so, no one between us can leak it, I mean its not that I am mocking you…khi, khi..".

P5 explained them everything(she didn't explain them everything like the mechanism, paths, only explained how&when to use the website)… "ok, through this we will do chatting.. khi khi khi…". L2 said, "yep, would be fun, everything seems clear and easy, nevermind the loop-holes..kukuku…."

In the world of spies, allies too are of great importance, it's better to stay in direct contact with them. They will do everything with 99.9% accuracy, do numerous missions risking their lives(and sometimes their families' lives too as a BAIT), whatever they do selflessly, they will never be awarded, not even a some money as donation for family, not even protection… But if they do one very small single mistake, even after achieving milestones in the pasts, they will never be forgiven, that one small mistake results in a big punishment, Death…

To survive and achieve the ultimate good(i.e., kill Sipu and Papu), P5 needed a shield, P5 wonders,{for this complete mission of killing them, I need a shield, I really very desperately need a seat in the UPO-Universal Peace Organisation}.

To secure a position in UPO, exposing/killing a member of UPO such as 'Barkings', a corrupt UPO member, would be the best way to be a trustee in the eyes of Sipu & for organisation.

Peppa wonders,{okeyy, to expose him, I will use the 'Money Flow Method', ammm... it can be like... I will put a mark on Barkings' one money note somehow, if Barkings' money flows to some other person/group/organisation secretly from Sipu, and somehow I can expose this thing to Sipu, then yessss... I will get a seat or atleast become a good ally/trustee of Sipuu... khi khi khi...very easy..all done...I just have to fill the plan...}.

First, as P5 was a double agent having good relations with the info-handler of QAE's bureau, she can somehow know Sipu's next strategic/deceptive move.

She found that QAE planned to stage a false-flag disaster, crash an empty airship containing an already-dead-body(as the pilot) near Bonu's desert to frame them for terrorism.

2days have passed since the website was made(QAE's false flag disaster was implemented yesterday and P5 did nothing but let it happen when she discovered this information the day before yesterday), she checked the website, hoping it's not leaked and is in a stable 3-groups state, there she saw some messages from the same ip address,
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "Beautiful"]
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "P5"]
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "Pleased to meet you at last."]
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "A Genius outsmarted herself lmao…kukuku…"]
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "Directing a different story, arent you?"]

she got shocked…{…huh?}, "the user's using IPv6 as his/her ip address, he says 'beautiful' which means he knows that I created this website as my insurance/hideout. By 4th line, he means that I'm definitely into something else, he knows me. This is definitely someone else whom I know, he's from our bureau, okhaeey, let's call him X. But how did he got the IP?"

"we three know the website address. Ok…huh…One of us has deduced that the three-party stability game theory I applied is flawed in this case here. I mean either L2 or Daisy knows that the three-party stability game theory I applied is flawed in this case here, let me call him/her Y. Taking advantage of it, Y leaked it to X."

she continued reading the messages,[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "I'm gonna Sell you"]
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "You surely are smart, aren't you?.. Cartoon"]
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "Come to ABC restaurant, 2nd floor."]
[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "Offer closes soon…"]

she muttered to herself, "bark as much as u want, doggy… khikhi khi…. Sorry I shouldn't use these kind of words, he's older than me ig…"

[2001:0db8:85a3:0000:0000:8a2e:0370:7334 – "kukuku…"]

she got frightened and got angry, "whyyy the hellllllll he's continuously mimicking my uncle!!!... doesn't he know L2's older than him by decades?.. ghhhhh…he's too crazy evil…"

"well, we cant say Y=L2, bcz, X is mimicking L2 means X isnt L2, because why will L2 use reverse psychology incorrectly without creating a foundation of his lie or some other thing. Also, there's no need of mimicking."

“ok so, Y could be either L2 or Daisy, but X couldnt be L2 or Daisy because X reacted on the website by saying ‘Beautiful’.”

“actually none of the website insiders(L2 & Daisy) will risk to leak it, because if any of them does, the other two will know that who did it..”

“so, this is some outsider who found &leaked it, definitely…,to Wheeler. The Leaker knew also knew what Wheeler will do.”

“oh, forget it…”

P5 was in Bonu. From headquarters, she returned her hotel, glowing like a diamond ore, under the round wet sky. Jumped on bed and she slept.

She woke up early getting a perfect sweety-sleep.

"I wish my mother could wake me up for nursery school instead," she murmured, brushing the nostalgia aside."But pity changes nothing. I must fulfill my ‘Duty’. ‘Duty’ comes before everything else; even the ultimate summary of Karma and the Bhagavad Gita is that ‘Duty’ is absolute."

“God hears me clearly and as equally as others. I don't need to join my hands, beg/sing loudly, or showoff my faith to be happy. I just need to listen where He guides me. People of this world never bother to listen to God. They simply scream their demands at Him and look away, expect miracles without obedience, and then complain when nothing goes their way. Huff…cut that…I have work to do…"

In bathtub, she made the blueprint of her next plan seeing the soap bubbles stabilizing themselves by releasing the trapped air using gravity, actually they were just decreasing their potential energy to lowest possible state just like everything else. It actually helped her plan to wind up.

Then She voice messaged and started scheming/threatening the QAE ‘s Info Handler just as planned…

The death threat shook him terribly. keeping calm, the handler first started to split P5’s schemes into 6 different parts slowly, concluding that his death is absolute if he even tries to play a bit.

Then P5 simplyy rushed to headquarters, and toook her seat.

Meanwhile, that night, Wheeler had already sold intel on P5 to Barkings and the terrorist group LQ(Lashkar-e-Qoiba), being the best mole u can ever see in your life, a perfect Tri-mole between QAE, Popom & Bonu…got money from both, destroying relations between all three, exactly as what P5 expected him to do…

Poor to know, Wheeler never knew about the fact that there are actually two P5 and both are females. P5 successfully framed the other P5…

P5 had already got rough blueprints of LQ's bases & buildings from L2, then paid a visit to LQ's leader 'Bob'. Bob was genuinely amazed. He had just bought highly-secretive-Intel on this Exact Super-Spy, and now she's standing right in front of him.

Well, P5 knows Bob wouldn't trust her, and wouldn't deal of anything, so she reveals/presents him the specific insider facts about the operation that only a genuine QAE insider could know exact transfer amount, the complete money flow, the dealer on the other end 'Barkings', and specific date of money flow.

P5 thinking exactly why Bob will like to cooperate,{the reasons: Barkings is known to be corrupt, so the LQ itself even cant trust him.P5 being powerless in front of Bob and LQ.so, Bob will yes cooperate(keep P5 on his side for now, as a pawn, whom he can sacrifice anytime) because P5 being a QAE insider having internal informations will 'always' be a leverage to him and benefit him always, khikhi. Bob will always want his own side stronger…. You have captured queen then don't take it already, keep it as blockage for enemy's moves to win even against a 3200elo chess-bot…}

Bob calculated(bob knows P5 wants herself to be his side, but Bob too has no choice, wants his own side absolutely stronger) and asked,"We really, should… align our narratives, for our own…different…mutual interests…right?...My Dear P5?.....", he further said, "oh,no need to hide anything….We both equally are high classes at different sides…"

Calm p5, believing everything's going just as imagined, directly laid out her terms, "I know your LQ debited a 15% interest advance from Barkings for an upcoming information/intel package's deal with him. When you deal with him, tell him exactly this: 'Mr.Barkings, I'm having a great offer on a new intel on P5. Seeing forward to work together. All money will be refunded on denial.'"

Absolute confident P5,"He will surely do the deal and buy it from u. Sell this intel to Barkings in exchange for a full 'suitcase of cash'. Once you have it, I will buy that 'cash-fulled suitcase' from you."

"but when u bought intel from Wheeler, what did he tell you?", Bob answered,"he referred the intel on you as 'info5'"

"and return the 15% interest only if he demands", Bob answered,"Yup…"

P5 wondering,{I said 'cash-full suitcase' and 'full suitcase of cash', it will genuinely make the suitcase seem suspicious, not the cash. Even if he tries to suspect the cash instead of suitcase, he can do nothing to replace the 'marked' cash money I want with some other cash money, bcz it contains a large sum of cash which Bob cannot arrange easily to replace with. Oh, nothing to worry of anything. They will never do anything to the marked cash money atleast.}

Exactly here, now Bob will try to take multiple advantages, he passed an offer on the field,“I want two QAE passports and 60% of that suitcase money, then u can have your suitcase,… lady…khh…fufufu”.hearing this, P5 smiled a bit,{u wanna dance with me, don’t you?}, she felt something wrong. She silently agreed the deal.

P5 recalls the reason behind why Barkings will eagerly want to buy the upcoming intel from LQ,{He probably would have thought that Wheeler sold the P5’s Intel to more than one parties, so maybe he probably would have sold intel in smaller parts(also Wheeler tells the intel number eg., info4, info2,etc) instead of complete intel. These things will motivate Barkings to get some more intel’s parts from others and easily bet/capture P5.}

Recalling the money flow P5:
(i)Sipu, Barkings & some other UPO members---(funding for Terrorism, cash and weapons)--->LQ terrorist group. Also, LQ<---(LQ debited 15% interest as advance from Barkings for an ‘upcoming offer’ saying “Mr.Barkings, great offer on a new intel, will work together on it, all money will be refunded on denial”)---Barkings.
(ii)Then Barkings will buy the info5-intel(handler doesn’t know, it’s intel on P5) from LQ. Money transfer will be like: Barkings---(suitcase1 containing the ‘marked cash notes’)--->LQ
(iii)Then P5 will trade the QAE passport for a the Suitcase1 from Bob. Money flow be like: Bob---(suitcase1 containing all the ‘marked cash notes’)--->P5

That day, for this Suitcase1, in early morning, the well-dressed QAE’s Handler(whom P5 had only told about only (i) and (ii) money flows) firstly managed to damage/poison/remove the ‘Catalytic converter’(it refines the smoke coming out of car) of Barkings’ car using a magnet, then made sure there was some senior traffic police on the road which Barkings’ car will follow, everything as per P5’s orders, so that his car will be stopped by the police, forcing the car to be sent for emergency repair-work, and so Barkings will arrive in office late, atmost 20-30minutes. It will be enough for Handler to execute the P5’s next phase, the triple-lock logic: The Triple-Marking System.

P5 designed Mark#1 that didn’t relied physically, the trap was designed to weaponize the ‘Linear flow of Time’ itself.
(because the culprit can always claim that “some agent came and put a suitcase in my office, also those pictures are fake because physical things can be edited easily, all these evidences are planted ‘later’to frame me”)

Mark#1-The Chronological Trap. Firstly, handler skims through the cashnotes, sends the exact ‘serial-numbers’(unique alpha-numeric codes used to authenticate currency, track it’s flow/circulation and prevents counter-feiting) of his money notes to P5 at some timestamp(e.g.,1:05PM).
(why this first step: imagine you buy something from anywhere at 8:00PM, and the cashier prints receipt with that item’s exact serial number and the timestamp.At 9:00PM, someone accuses you of stealing that item. You can show your 8:00PM receipt.The timeline proves it's impossible for you to have stolen it, because you already had it documented in your

possession earlier already.)
Lastly, Time travel Paradox(a chronological trap):traditionally, a person got accused of crime, but the evidence is gathered ‘after’ the fact. This standard sequence leaves ‘hollowness in timeline’ which can be used as defense easily:"the evidence was planted ‘later’ to frame me". To destroy this sequence, need to create an irreversible/locked logical anomaly. At this moment Barkings is standing with the the traffic-police on road, police officially logged barking’s location at 1:05PM. This timeline is absolute, barking’s cannot lie about it. And at this very moment 1:05PM, Handler sent the exact serial numbers of the notes to P5, and the timestamp 1:05PM got saved/logged in both of their phones and the server. This thing proves, Suitcase1 with all money existed in his office before: The secret(Bob-Barkings-info5)deal & Exposing-Barkings scene…Hehe, the Server proves Barkings possessed the Money for the deal already.This is the Ultimate Time-Travel Paradox.
And, when Barkings will trade with Bob the money suitcase1 for intel, Bob/LQ possessing the money/suitcase1 proves that Barkings did a secret-deal with Bob.(P5 will deal QAE-passports & 50%money for the suitcase1, then show everyone that the suitcase1 which actually belonged to Barkings was transferred to LQ secretly)

In the world of high-lvl espionage, a simple photograph wasnt enough. Advanced digital manipulation, a basic image of a bribe can be easily dismissed by the UPO council as AI-generated deepfake.

Mark#2-A physically unfalsible, AI-proof photo of Barkings’ suitcase1 in his office. The photo will contain numerous variables to make it AI-proof(eg.,an AI can never create a perfect line of sight of a human-being or other beings).The Handler placed the suitcase on the desk, opened it, and arranged the scene exactly according to P5’s specific instructions.
First, the fingernail pinch: Handler extended his wet-hand while pressing thumb against the desk and very-tightly pinched the cash notes using fingernails. It also left physical marks and wet-distorted water-damage on the paper notes for laters extra-proof.
Second, Multi-Hand Interaction:With his other hand, held a loose, thick stack of the exact same currency notes, fanned out at random, overlapping angles slantly to create an impossibly complex human texture.
Third, Slant notes: took some loose cash notes and let them rest at sharp slant, bridging the gap between the velvet interior edge of the suitcase and the rough, grained wooden surface of the desk. The resulting shadow interaction by several lights on the ceiling, where the paper met two entirely different textures, was a mathematical nightmare that no rendering algorithm could perfectly spoof for all of the notes. Also placed one rubber-eraser to support a specific note stay slant.

-To completely destroy AI-claims, as per P5’s orders, three more better real-time variables near the suitcase, but this time Handler messed:
Mobile phone: he lays his mobile displaying live clock of QAE’s national military.
Tv channel show: the tv was broadcasting live ‘international’ financial news, it displayed news ticker of trading metrics of Toman(a country in west) stocks exchange at bottom of screen.
[mobile phone’s clock & tv’s ticker are contradicting each other: as per standard global

time-zone mechanicss, Toman stock Exchange occurs at 09:00 AM WST(Western standard time). In the local timezone of the Handler's room, 09:00AM Toman's time translates to 01:00AM in middle of night, lol. yes, the photograph captured both variables in a single frame. lol]

And he forgot/neglected the third variable: the Gravity tool. Maybe he thought, gravity tool can be denied claiming it as Electric/battery powered. Or maybe he couldn't get it from any market.

Mark#3-Ionic Chemical trace. Requires no direct-contact with money notes at all. Handler normally leaves a non-standard-looking compliance form in the briefcase(an auditor normally leaves), the form was treated with an odorless&colourless ionic compound. currencies stored in the same enclosed space as the document for more than 30mins absorbs trace quantities of the compound. The compound's harmless. If currency is later tested in forensics and exposed to a standard chemical reagent, the compound appears as a distinctive signature, essentially a chemical 'fingerprint'of Barkings' briefcase environment. Crucially, this covers every single note in the bundle automatically, not just the ones handler directly touched.

(eg.,if u dance with some other woman,her perfume smell settles on your clothes and identifying that smell, your wife kills u…lol….wait, what if the smell is from other thing?,…perfumes contain (colourless)esters that can be chemically tested using phenolphthalein-test. initially pink due to indicator,then slowly turns colorless upon heating due to breakdown of ester into smaller acidic compounds, it turned colourless proves ester is present and the boy cheated his wife…lol…)

P5 didn't suggest handler to put a standard form for the deal because it will become an obvious proof against the Barkings's hidden deal with LQ for the intel. If Sipu gets to see this form, it will be a direct proof against Barkings' hidden game, and Sipu will genuinely kill him.

Today, our Peppa-P5 will expose Barkings…

P5 tells Sipu,"My personal Agentic-AI has made complete analysis in very simple-language and a proof of how much more money he has ate.let me hint u, around $2billion…or more…ig?…khikhi…", she happily returned Bonu…

but unfortunately…no-one expected, things will come out worse…Mark#2 was denied by some smart techy-guy…Mark#3 was proved inconsistent/lacked evidence…and Finally Mark#1,was proved fraud because P5 expected them to get suitcase1 from LQ but… LQ collapsed, Bob missing..Suitcase1 itself got missing!!! And also QAE's Handler's phone was meant to contain the timestamp of sending serial-numbers, but missing!!!!! If atleast P5 would've saved the serial-numbers at that timestamp 1:05PM in some Bogle-drive or Petabyte software, it could've been found as the best proof, but all these things destroyed the data-integrity of cash flow……..resulting a counter-proof,"Innocent-Barkings was framed"…lol

Next day, P5(Peppa pig)was found dead…

Again to the point, Wheeler never knew that there are actually two P5 and both were females.

The other P5 was in Bonu's airport… a cat…drinking tea sitting straight resting her big curly-furry yellow-tail…she has flight for QAE…

Bonu's leader,too a total-fraud, giving his speeches on the fraud-media,"I gave a guarantee: I won't eat, nor will I let anyone eat… god bless bonu…" (meaning: I wont engage in corruption, nor will I let anyone else do so)

Sily gently closed her dark Scarlet-eyes, about to drop a tear,maybe for her parents….. watching news, looked like everyone praying for their leader's long age…lifted her suitcase, she just quietly walked herself into the airplane,sliding the QAE-passport in pocket, planning her next move… : (

Happy ending, happy ending….lololol
