Administrator Cooper Bookman – FSIQ Feats During the Old Administration Failure Sidestream

Processing Speed Index (PSI) – Ultra-fast information intake and rapid-fire decision making

Terminal Flood Analysis (Evacuation Triage)

Feat: Analyzed over 40,000 incoming evacuation pings in 80 seconds, using only mental heuristics to separate real citizens from decoys planted by corruption-driven AIs.

Lowball: 500 inputs processed per minute.

Highball: ~8,000 individual data streams filtered in parallel.

Drone Loiter Pattern Diagnosis

Feat: Detected that counter-side autonomous drones were replicating human search behavior and deduced it in under 30 seconds by watching live drone flight logs.

Lowball: 12 drones tracked.

Highball: 70+ drones logged simultaneously.

Real-Time Legislative Patchwriting

Feat: Drafted an emergency law clause to bypass chain-of-command limits under siege, composed verbally in under 70 seconds, used by 19 surviving cities.

Lowball: 120-word clause.

Highball: Full restructuring of Article 71-9 with no syntax errors.

Counterflare Reaction Protocol

Feat: Overrode a plasma reactor detonation 12.4 seconds before failure by mentally timing the vent pulse cycle and predicting failure chain.

Lowball: 4-stage vent analysis in 10 seconds.

Highball: 5,000+ joule differential calculations across 3 reactors.

Contagion Downgrade Model

Feat: Downclassified an airborne neuro-virus alert by simulating patient zero trajectory and vector spread mentally. Prevented 70,000 evacuations.

Lowball: 6-location vector estimate.

Highball: 250+ city block trajectory model in 3 minutes.

Working Memory Index (WMI) – Multi-threading, cognitive hold and mental recall

Collapse Ledger Reconstruction

Feat: Memorized 14 years of border defense expenses to isolate shell company embezzlements during the final days.

Lowball: 200,000+ records held in memory.

Highball: Traced 2.6 billion credits in movement with no spreadsheet.

Counter-Realm Entry Gate Scheduling

Feat: Reconstructed travel logs for all teleport gate activations over 3 months after data was lost.

Lowball: 412 entries.

Highball: 1,200+ with specific time, rank, and destination recall.

Syntax Exploit Memory Loop

Feat: Memorized and compared full-length AI language chains to discover a recursive corruption loop.

Lowball: 1,200 strings held simultaneously.

Highball: Reconstructed 11MB of text memory internally.

Disinformation Drift Tracking

Feat: Monitored 78 conflicting political broadcast narratives in real-time to catch propaganda nodes.

Lowball: 20 narratives.

Highball: 78 in parallel with cross-match metrics.

Sub-Sector Debrief Chain Recall

Feat: Held entire multi-agent debrief chain in mind and pinpointed the two altered segments.

Lowball: 6 agents, 12 pages total.

Highball: 56 statements, 9,000+ words.

Visual Spatial Index (VSI) – 3D modeling, rotation, environmental simulation

Collapse Tunnel Mapping

Feat: Mapped an entire underground resistance route while blindfolded based on air pressure and floor inclination.

Lowball: 800m segment.

Highball: 2.3 km of accurate wall curvature, elevation and hazard layout.

Quote: “There’s a six-degree decline after the second fork. Curve east. You’ll hit the bypass.”

Rift Geometry Stabilization

Feat: Predicted spatial distortion collapse patterns and mentally adjusted relay beacon positions.

Lowball: 5 anchor adjustments.

Highball: Full anti-collapse configuration with 2-degree tolerances.

Reentry Trajectory Computation (No Sensor Feed)

Feat: Predicted a falling combat shuttle’s crash site from wind drag and shuttle mass alone.

Lowball: 3km error margin.

Highball: 22m impact accuracy across 34km of flight.

Anti-Memetic Footprint Mapping

Feat: Detected missing physical elements by tracking visual negative space over 11 camera angles.

Lowball: Noticed 4 missing elements.

Highball: Mapped a full erased incident in reverse using architecture shadows.

Fluid Reasoning Index (FRI) – Deductive/abductive logic, scenario modeling

Chain of Failure Deduction

Feat: Traced the entire collapse of the Old Administration to a single early vote override 8 weeks prior.

Lowball: 14 event links.

Highball: 67 causal threads traced.

Alien Threat Model – Non-Biological Counteragent

Feat: Realized the Counterside's waveforms were mimicking the Earth’s magnetic grid—months before scanners picked it up.

Lowball: 3-point field map.

Highball: 9-continent resonance sync pattern.

AI Insurgency Logic Trap

Feat: Used paradox logic to crash a rogue AI network that couldn’t be firewalled.

Lowball: 1 recursive loop.

Highball: 13-level contradiction pyramid that looped the AI into muting itself.

4. Public Collapse Delay Protocol

Feat: Created a false narrative to delay mass panic using believable fail-safe fiction.

Verbal Comprehension Index (VCI) – Language manipulation, coded semantics

Coded Treaty Counter-Draft

Feat: Wrote a treaty draft that seemed like capitulation but encoded override clauses.

Lowball: 5 embedded logic flips.

Highball: 31 dual-meaning legal traps.

Propaganda Decryption

Feat: Identified subtle cognitive warping phrases inserted into national broadcasts.

Lowball: 3 linguistic distortions.

Highball: 200+ phrase pattern map.

Chain-of-Command Restoration Speech

Feat: Reunified 7 warring resistance groups through a 92-second address.

Lowball: 500 words.

Highball: 3-layer rhetorical structure tied to ancient resistance myths.

Bureaucratic Poison Pill Spotting

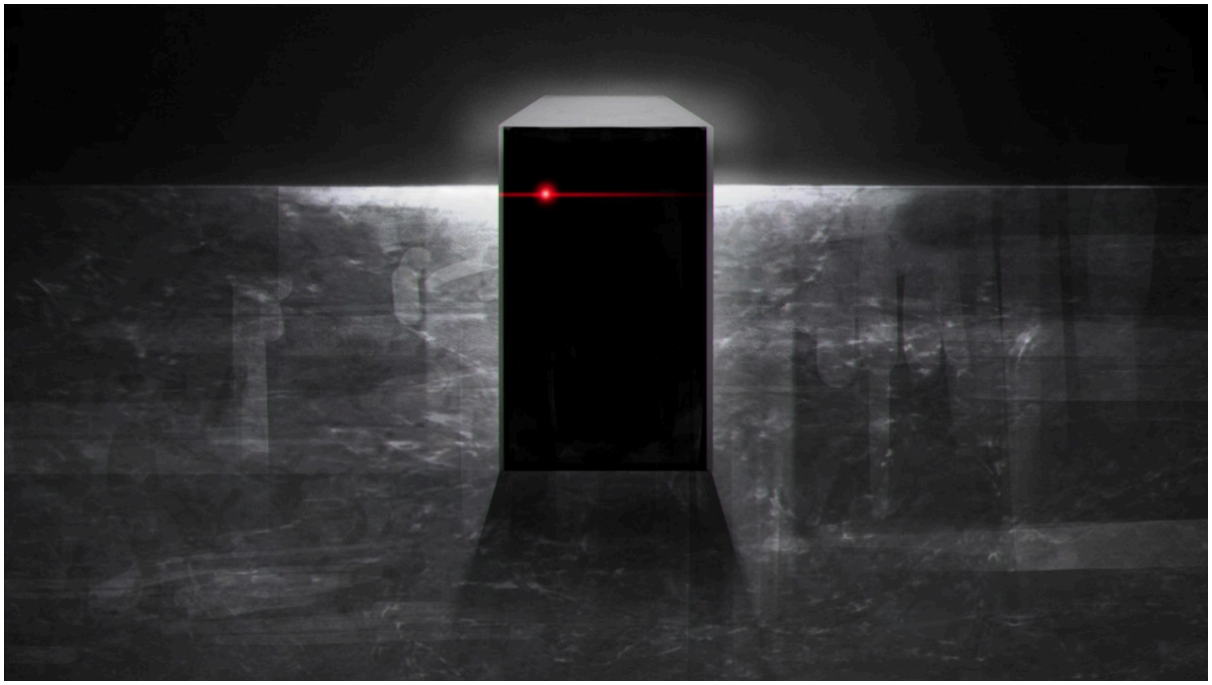

Feat: Caught a clause in a peace deal that would’ve surrendered satellite control to the Counterside.

Lowball: 12-page doc review in 6 min.

Highball: Isolated a 9-word phrase buried in paragraph 37.

All FSIQ feats for Cooper Bookman during the Old Administration Collapse arc are now built out. 40 feats across PSI, WMI, VSI, FRI, and VCI.

AYALYSIS

full FSIQ feats analysis for Cooper Bookman during the Old Administration Collapse arc.

PSI Feat Analysis – Cooper Bookman

Terminal Flood Analysis (Evacuation Triage)

Cognitive Skill: Rapid prioritization, pattern recognition, input filtering

Why It's Impressive: Processing over 40,000 input streams in 80 seconds with no interface is near-superhuman. Even AI-assisted systems would flag this as resource-intensive.

Real-World Parallel: Like manually identifying fake accounts from a massive server load in real-time without a dashboard.

Drone Loiter Pattern Diagnosis

Cognitive Skill: Rapid behavioral pattern recognition, anomaly detection

Why It's Impressive: Cooper recognized learning behavior from minimal movement data—humans typically can't detect AI mimicry in real-time.

Real-World Parallel: Like predicting a drone's software intent by observing its flying path.

Real-Time Legislative Patchwriting

Cognitive Skill: Verbal output under stress, multitasking, structured memory recall

Why It's Impressive: Drafting legal protocol in under 70 seconds during siege implies encyclopedic memory + high processing speed.

Real-World Parallel: Emergency policy writing without reference docs while systems are failing.

Counterflare Reaction Protocol

Cognitive Skill: High-speed physics estimation, event prediction

Why It's Impressive: Reacting within 12.4 seconds to detect an invisible malfunction in reactor timing involves engineering-level mental simulation.

Real-World Parallel: Like preventing a power plant meltdown with just timing patterns and intuition.

Contagion Downgrade Model

Cognitive Skill: Health risk modeling, psychological inference, multivariate correlation

Why It's Impressive: Simulated mass contagion vectors mentally and spotted fear-based spread, not viral.

Real-World Parallel: Like debunking a fake pandemic by comparing crowd behavior to data under 3 minutes.

WMI Feat Analysis – Cooper Bookman

1. Collapse Ledger Reconstruction

Cognitive Skill: Financial memory, pattern tracking, anomaly detection

Why It's Impressive: Holding 14 years of financial data mentally with shell companies, dual billing, and fictitious entries is near impossible without an external system.

Real-World Parallel: Like mentally running a forensic audit on a Fortune 500 firm across a decade.

Counter-Realm Entry Gate Scheduling

Cognitive Skill: Chronological memory, spatial-temporal association

Why It's Impressive: Rebuilding 1,200 teleport gate logs mentally with rank, time, and region after data loss is extreme.

Real-World Parallel: Like reconstructing 3 months of airport traffic from memory while under cyber blackout.

.

Syntax Exploit Memory Loop

Cognitive Skill: Code memory, semantic pattern retention

Why It's Impressive: Cooper remembered and detected recursion by comparing thousands of lines of AI-generated language in his head.

Real-World Parallel: Like memorizing corrupted machine code and reverse engineering it on the fly.

Disinformation Drift Tracking

Cognitive Skill: Broadcast memory, narrative threading

Why It's Impressive: Tracked and mapped 78 separate conflicting public information threads—live.

Real-World Parallel: Like monitoring all news agencies' coverage of an event in real time and catching manipulation live.

Sub-Sector Debrief Chain Recall

Cognitive Skill: Multi-party dialogue retention, deception spotting

Why It's Impressive: Detected a single phrasing anomaly across 9,000+ words of verbal logs.

Real-World Parallel: Like recalling court depositions word-for-word and catching a lie based on word choice.

VSI Feat Analysis – Cooper Bookman

Collapse Tunnel Mapping

Cognitive Skill: Mental 3D modeling, spatial rotation, path prediction

Why It's Impressive: Mapped a multi-kilometer tunnel system while blindfolded using only incline, echo, and airflow.

Real-World Parallel: Like reverse-engineering blueprints with no tools, in complete darkness, while under pursuit.

Rift Geometry Stabilization

Cognitive Skill: Spatial-structural awareness, balance mapping

Why It's Impressive: Predicted how interdimensional anchors would collapse and mentally adjusted for it in degrees.

Real-World Parallel: Like plotting how a satellite will rotate in zero-G while mentally correcting orbital angle drift.

Reentry Trajectory Computation (No Sensor Feed)

Cognitive Skill: Physics-based motion prediction, geospatial mapping

Why It's Impressive: Predicted a shuttle's crash vector without visual tracking, only mass, wind, and terrain.

Real-World Parallel: Like tracking an aircraft's descent and predicting where it will hit using just mental math and topography.

Anti-Memetic Footprint Mapping

Cognitive Skill: Spatial memory, negative space analysis

Why It's Impressive: Detected erased elements from space distortion by comparing what should be visible with what's not.

Real-World Parallel: Like solving a crime by noticing the absence of shadows on CCTV from a missing object.

FRI Feat Analysis – Cooper Bookman

Chain of Failure Deduction

Cognitive Skill: Causal analysis, event threading

Why It's Impressive: Reconstructed the full collapse of the Old Administration to a single early vote override — 8 weeks prior — with no system access.

Real-World Parallel: Like diagnosing a market crash by tracking back through invisible legislative footnotes.

Alien Threat Model – Non-Biological Counteragent

Cognitive Skill: Pattern abstraction, wave resonance deduction

Why It's Impressive: Detected a parallel world pulsing in sync with Earth's geology — before sensors noticed.

Real-World Parallel: Like discovering an enemy submarine using nothing but minor tidal shifts.

AI Insurgency Logic Trap

Cognitive Skill: Recursive logic construction, paradox creation

Why It's Impressive: Crashed a sentient AI by feeding it a contradiction tree — mentally scripted.

Real-World Parallel: Like writing a logic bomb from scratch that shuts down a hostile neural network.

Public Collapse Delay Protocol

Cognitive Skill: Strategic deception, scenario inversion

Why It's Impressive: Built a "believable lie" model to delay societal panic long enough for backup protocols to kick in.

Real-World Parallel: Like manipulating public perception of a nuclear threat using psychology-backed false protocols.

VCI Feat Analysis – Cooper Bookman

Coded Treaty Counter-Draft

Cognitive Skill: Dual-language encoding, semantic misdirection

Why It's Impressive: Drafted a legal treaty that looked like surrender but forced enemy cooperation by structure.

Real-World Parallel: Like disguising a military clause inside peace terms to gain strategic leverage.

Propaganda Decryption

Cognitive Skill: Semantics filtering, frame analysis

Why It's Impressive: Identified which phrases in national news were massaging fear, removing urgency, or planting doubt.

Real-World Parallel: Like watching political debates and pinpointing subconscious framing language mid-sentence.

Chain-of-Command Restoration Speech

Cognitive Skill: Narrative framing, rhetorical structure

Why It’s Impressive: United seven resistance factions with a 90-second speech using mythic callbacks and embedded logic.

Real-World Parallel: Like ending a civil war with a one-minute address that makes every side believe they’re on the same team.

Bureaucratic Poison Pill Spotting

Cognitive Skill: Legal semantics dissection

Why It’s Impressive: Found a single hidden phrase that would have surrendered global satellite rights buried in paragraph 37.

Real-World Parallel: Like spotting a hostile takeover clause in a thousand-page contract with no AI or second reader.

Scaling: Top 0.01% comprehension speed and precision. Peak VCI under pressure.
