Ron Kamonohashi feats document

By YuuichiGiri

Ron Kamonohashi, the main character from Ron Kamonohashi, the deranged detective, also one of the new generation detective characters. He is one of the best detectives in the BLUE academy which is the best detective school in the world. At the same time, he is the descendent of the Holmes and Moriarty family. In this document it will cover some of his thinking process, the timing of what he deduced, and the type of thinking and reasoning. His best intelligence ability is deduction. However, he lacked feats in strategy and planning which are currently the weaknesses when we discuss him.

Metropolitan Serial Drowning cases <Chapter 1>

Observation / Perception / Thinking speed / Inductive rsn / Cognitive thk / Musical intelligence

Even looking outside from the screen and saw Toto was requiring his help, Ron could even observe the features Toto had and infer them immediately. Before opening the door, Ron already said to Toto had been to the shrine, by found out the pine pollen on Toto's shoulder, his left pocket had a coffee that had not opened it yet, and also his right pocket had some

coin sound which was aimed for the donation to scatter the banknotes. After that, he even deduced that Toto was being raised up by his grandparents by inferring he avoided walking in the middle of the shrine and caused the pine pollen to fall on Toto's shoulder.

Perceptual rsn / Deductive rsn / Critical thk / Convergent thk / Info control / Observation / Thinking speed / Analysis / Data analysis / Short-term planning + strategy / Formulation speed / Prediction

After just seeing the corpse for a second, Ron observed the white foam around the victim's mouth which found out the victim had died by drowning. Also, by finding out there were no marks on the victim's clothing indicating violence, his designer suit was a high rank which he was wealthy, the tan-line on the victim's hand showed his watch was stolen which means his money also got stolen but without any resistance. By seeing the police learn the victim's identity from his business card, Ron inferred the victim's wallet had also got stolen.

After knowing more information of this serial case, such as all the victims' features, their gender, and the location that the victims were discovered (such as a celebration, class reunion, wedding and a birthday party), Ron deduced there was a perfect place to commit all this murder. In this, Ron analyzed all the possibilities in this limited area and found out that barber might be the only option. Ron observed those victims were men with longish hair, and many of them had undyed roots. Because they were going to something like a party or class reunion, it was possible that they decided to get a good look, so they might go to the barber. By using the features he observed from those corpses and the action of those corpses, Ron deduced the barber was no appointment required, which aimed to attract the first-time customer. After that, Ron deduced how the barber committed those murders. He knew that those victims died from drowning, which could be because the shampoo sink was filled with oxygen deficient air in the barber shop. The things he confirmed was that a barber committed this serial murder case because a barber could always talk with their customers, so they could easily find out if the customer lives alone or not to choose their victim. To confirm which barber shop could commit this murder, Ron analyzed the area and found out there was one barber shop that could buy the ice easily and could not see into it from the outside.

By knowing where the location of the barber shop and the culprit was, Ron set up a short strategy to catch the culprit immediately. He arranged for Toto to wear the rich clothes to pretend to be a wealthy stock trading person to deceive the culprit, making him think Toto was the victim he was targeting. Knowing the shampoo sink contained oxygen deficient air, Ron arranged for Toto not to breathe in one second to avoid him to die. By analyzing the system of the barber shop building Ron predicted where the culprit would try to escape and locked the door to prevent him from escaping.

Locked Room piggy bank theft case <Chapter 2>

Observation / Probabilistic rsn / Associative thk / Analogical thk / Deductive thk / Thinking speed / Inducement / Analytical thk

This case, Ron sorted out two cases. One was the piggy bank and one was the murder case. Before explaining what he deduced in this case, let's focus on what he discovered when he walked into the victim's house first.

First, he found the suitcase and the piggy bank that it belonged to with the rubber plug so it was impossible to remove the coins from the huge hit. Also, he discovered the piggy bank was yellow, but he knew the pink one was more popular. According to the victim, the local general store had a lot of yellow ones and it was cheap. Then he found out there was jewelry in the house and the victims have been getting a lot of silent phone calls lately. Eventually he knew the victim's sister got home.

So for his deduction, Ron knew that it was odd if there was a thief then why they did not choose to take the jewelry but the coins in the piggy bank. By linking the color of the piggy bank, the suitcase, the victim's sister got home and the harrassing phone call, Ron deduced that there was a murder case. When the big sister returned home, there was a stalker waiting for her (harrassing phone call). Then the stalker backed her to the living room and the big sister used the piggy bank to hit the stalker and killed him. And this caused the coins inside the piggy bank to get covered by the stalker's blood. To cover this, the big sister bought the new piggy bank and put new coins inside (the yellow color of the piggy bank could be bought in the local general shop, so Ron deduced that it could easy to get a new one if the original one was broken to pretend it). Eventually, she put the stalker's corpse into the suitcase and dropped him behind the river (the size of that suitcase was too big for the big sister's one night trip).

By getting these conclusions and deduction, Ron suggested to everyone break the piggy bank to check the amount of the coins inside. But the aim of this suggestion was checking the fingerprint of the coins inside this piggy bank, because at that moment Ron had already formulated how the big sister killed the stalker. After all that, Ron said he was going for a walk, but was going to buy a new piggy bank for Toto for his reveal of this deduction. In conclusion, in this case Ron deduced there was another case that happened to belong with the piggy bank case, without having any knowledge of the stalker murder case. It required Ron to calculate all the possible reasons for why the coins in the piggy bank were lost after discovering those features in the house. Also, one thing to know was, after he arranged Toto to check the fingerprint of the coins, he did not even tell where he went. He deduced the exact location of the big sister to drop the stalker's corpse while got no knowledge of the murder case.

Benizome Hot spring murder cases <Chapter 3-4>

Inductive rsn

Ron suspected that the tracking instructor from BLUE had checked the visitor register before they arrived before his deduction had a blind spot. Not only will police's shoes get grinded, reporters also have this kind of problem.

Thinking Speed / Logical Reasoning / Inductive Reasoning / Abductive Reasoning / Insanity inducement / Analogical Thinking / Associative Thinking / Intuition / VSI

Ron found out that Amamiya wasn't the culprit in the case. He already knew that Amamiya was walking to this hotel so she obviously didn't know about the legend of this hotel, because the way that Ron and Toto knew about the legend was from the pamphlet they took from the taxi driver. Therefore Amamiya didn't know about the local legend because she didn't even take the pamphlet, so she obviously could not set the murdering scene as similar to the local legend. When Ron was discussing the case with Toto, his intuition made him feel someone was eavesdropping on them so he hit the wall to make the tracking instructor give up.

Ron deduced that the husband was the culprit in this case. He observed the anti-slip mat when he found his ping-pong, he knew that although it was an easy trap, it's effective on her wife without her glasses. Therefore her wife was falling into the bath and also the bath's water was about zero degrees. To do this, the husband used the drainage channels to change the direction of the warm water and pollute the cold water into the bath, so that's why there's white fog because that was the steam from the hot water to the river. However there's a problem, the leaves from the river could not clean it easily.

Therefore the husband used the local legend to put a huge amount of leaves in the bath to misdirect the witnesses. The husband knew he could not set the trap if it was the female bath, so he exchanged the symbol outside the bath from male to female which induced the women to go into the male bath, creating no one in the female bath so he could set his trap. The time he did this he heard Ron and Toto decided to play Ping-pong, so the male bath got no one in. This could explain why Amamiya went to the male bath, because the husband did not expect them to go into the male bath before he exchanged the symbol, so Amamiya was getting misdirected.

EQP / EQU / Abductive Reasoning / Inductive Reasoning / Probabilistic Reasoning / Problem Solving / Thinking Speed / VCI / Perceptual Reasoning

Ron confirmed that the tracking instructor needed support from him. Ron had this conclusion because he observed the instructor's anxious attitude and working method (the eavesdrop, which also means Ron already he's from the BLUE), he concluded that the tracking instructor needed his help privately. That's why he wanted to prove that Ron was still the detective.

Hand Collector Killer case <Chapter 5-6>

VCI / Perceptual Reasoning / Linear Thinking / Abductive Reasoning / Deductive Reasoning / Abstract Thinking / Logical Thinking / Cold Reading / Info Gathering / Linear Thinking

When Ron heard Yamane describe how the tattoo of "the hand collector" looked, Ron knew that it was strange as when Omito said they caught the "hand collector" it was a night.

Logically Yamane could not observe how's the tattoo looks like, and also that was an urgent situation, so Ron knew that Yamane saw what the tattoo was like in other situations.

Ron then tried to verify the situation when Omito and Yamane tried to catch the "hand collector". He made Toto forced to hit Omito and Omito avoided it easily. It means that Omito said he got hit by the criminal so he gave up to catch him was a lie. Omito then said he didn't see whether Yamane put the handcuffs on the criminal or not, he knew that Yamane was having some psychological problem on that day so he decided to shelter Yamane. From the reaction of Yamane, Ron and Toto knew that Yamane admired Omito.

Ron then suspected Yamane was still hiding something so he took Yamane's buttons to try to find out something. As he expected, Yamane then said "I didn't lose it this time" to make Ron know Yamane had lost something already. Then Ron received the phone call from Spitz. Spitz found out the "hand collector" is called Minoru Mushanokoji. He was confirmed that he's the "hand collector" as Spitz found three sets of hands in his fridge. Ron then understood how Minoru died, he suicided.

Because Omito and Yamane saw his face, Minoru knew the jig was up. The criminal that cut Minoru's hand was the one who discovered Minoru suicided first — Yamane. When Yamane caught Minoru, he discovered that he lost the handcuffs (Ron knew it already when Yamane said he didn't lose it this time). Because he lost the handcuffs, this important thing in the police, he worried this might affect the reputation of Omito, so he cut off Minoru's hand when he discovered he suicided because this could make other people think someone also cut Minoru's hand and also took the handcuffs together.

Live Broadcast murder case <Chapter 7-8>

Probabilistic Rsn / Knowledge / Observation / Deductive Rsn / Mechanical and Bodily Kinesthetic Intelligence and Perception / Experience / PSI

When the volunteer got selected by Torage "randomly", he is given noise-canceling headphones, and Torage shows him three signs for him to finish it, and the volunteer finished it successfully make all the audience and Toto got surprised. Ron then said, "Will Mofu sensei discover it?" which could mean that Ron had observed that the probability of the violence was arranged by Torage.

Mofu sensei then described that even if a person is disguised, it's impossible to change their basic movements, which function almost like fingerprints, and after analyzing the test subject's movements with the biological motion app, she has confirmed that the volunteer's the exact same test subject as last time. In other words, he is just a plant working with Torage.

The point here is, Mofu sensei needed to use her biological motion app to find out that the action of the volunteer is the exact same test subject as last time. But Ron just watched it from the TV and observed the action of the volunteer, which proved he has a good observation and experience on this deduction. Because Biological motion is motion that comes from actions of a biological organism. Humans and animals are able to understand those actions through experience, identification, and higher level neural processing.

Guesswork/ Info gathering / Observation / Perception / Knowledge / Conceptual Rsn/ Cognitive Rsn / Thinking Speed

Ron acted as a fan of Torage and used Toto's police notebook to try to get the sign from Torage. At that moment, Ron truly did not know the sign might be the significant evidence in this case, but as a detective, he needed to gather all the possible evidence he needed for the case.

Mofu sensei then said based on her observation of flaccid paralysis and cyanosis, she thought it was a nerve poison. Ron then said he completely agreed with Mofu sensei's opinion, which proved that Ron had a certain level of knowledge from medicine. Then Ron also thought the spot on the back of the volunteer's neck could be a wound from a poison needle, which linked to a way that no one thought it, it might be based on his own experience in BLUE.

After that, Ron said "we will discover the trick, and get the bonus psychics to scram. That wasn't esp, I will overcome Torage-kun and punish him with modern science and law. So we could first divide it into individual parts. Using the vision of us and we all already knew the consequences, the modern science part might be how Torage used a poison needle to murder the volunteer, which Ron had already solved and sort out the timing and method of Torage used to commit his murder in a short time. Law also proved that Ron knew what's the trick that Torage used, making him confirm that Torage was not using any esp to commit the murder.

Observation / Perception / Decompositional rsn / Critical thk / Creative thk / Divergent thk

Ron then watched the dead record of the volunteer and fell asleep. However, he did not miss out on this point. In his mind, he had said before to Toto he did not believe in esp, so the way that Ron was thinking in this case might be the volunteer was acting, he had said it before when he was watching the TV in his home. Using this concept, Ron found out the weird things of the word. If he tried to turn the word 'death' opposite, it was similar to 'sleep'. Ron concluded it by using his observation to discover the weird things of the font. Combining this was not an esp, Ron then concluded that Torage employed the volunteer to do the things he wrote on the board, including the 'sleep' action. Then Ron could confirm the timing of Torage committed his murder was using the time gap when the volunteer acted he was sleeping and used the poison needle to kill him.

Ron also knew where the poison needle Torage hid in. Linked to the signature from Torage on the police notebook, Ron then sorts out why he used the thicker side of the marker to sign, because he inserted the poison needle into the narrow end.

Island Observatory murder case <Chapter 9-13>

(Ron was nervous when it was pointed out that he was the culprit, so all his deductions may start after he got punished by Toto, which might be shorter than before)

Info control / Logical thk / Linear thk / Convergent thk / Reflective thk / Thinking speed / Problem solving / Critical thk / Knowledge / Thinking speed / LTM / PSI

After hearing Toto's research result, Ron found out that it was impossible to succeed in the murder.

He understood that from 23:00 - 1:00, from the record of the telescope, it was all dark in the dome, so he deduced it was impossible to directly shoot the lights in the dark. Therefore the timing that the culprit broke the 7 lights might be before 23:00 or after 1:00.

However, they just heard one gunshot after 1:00, so Ron proved that the lights shot out before 11:00, which means at 11:00 the floor was already covered by the glass fragments, so it was impossible for Ron to not get hurt if he walked in (he did not wear shoes).

By sorting out he would get hurt if he walked in the dark by not wearing shoes, Ron then deduced that he did not take a single step in the dome after 23:00 because when he was discovered, he did not wear shoes. It means that if he walked in the dark to shoot on Onodera-san, his feets might be hurt.

And Onodera-san was killed when the gunshot sounded at 1:00, but Onodera-san and Ron were between a huge telescope, so it was impossible for Ron to murder Onodera-san.

Ron also deduced that he might be taken by the culprit when he fell in a deep sleep, which means his meal was put on medicine by someone. He then deduced that there might be some trace in his room but he failed to discover it, which he found out the culprit was meticulously planned and prepared the murder for the long time. According the action of he tried to avoid Jumonji suicide, it proved out that Ron suspected this case was linked with BLUE.

Ron and Toto then discovered the death scene of John Grizzly. By using his knowledge and experience Ron deduced that John Grizzly was murdered in a short time by touching John's body and judged by his body temperature. He also discovered the fisher line.

When Ron needed to explain why he was not the culprit, he just sped up to talk about all his deduction in fast, which means Ron remembered all details and good processing speed of what he needed to say to solve his role.

Logical rsn + thk / Critical thk / Application thk / Abductive rsn / Inductive rsn / Analogical thk +rsn / Observation / Lateral thk / Thinking speed / Mechanical Perception / VSI / VCI

Ron first inferred that the one who had the most possibility to kill John Grizzly was Jumonji-san. To get this conclusion, Ron remembered that when he and Toto heard the gunshot, they ran down to where he landed. It was because right after hearing the gunshot from above, they looked out the window and saw John Grizzly falling. Therefore if not witness John Grizzly falling, people may make more sense to head to the roof, because there was the gunshot from. However, Ron remembered that someone who immediately ran to where Grizzly fell outside, and he got soaked by the rain when he shot Grizzly on the roof but

he tried to cover the fact. The timing that Ron deduced this might be after he witnessed and checked the dead body of Grizzly, because after that he and Toto were going to find out how Onodera-san died, so it might not be that he concluded this while he was observing.

When Ron and Toto returned to the murder scene of Onodera-san, Ron discovered that the door was not only locked, it also got glued and sealed the two of them inside. However, this might make Jumonji-san unable to lock the door. Therefore he misdirected Onodera that made her think the door was locked and when she turned the lock to open the door, she actually locked it. Here Ron needed to link between the glued side door and the actions of what Onodera might be doing when she realized she was getting locked, which needs the ability of lateral thinking to link them together.

Then, Ron needed to find out the use of the fishing line from John Grizzly. Firstly, Ron thought in a way that the gun behind him when he got discovered was not the real gun, that's only the fake gun from the lobby. Using this conclusion that there's two guns, Ron deduced that the culprit tied one end of the line to the top of the telescope and tied the other end to the trigger of a gun that was hidden inside the air vent. Same, Ron needed to imagine what Onodera would do when she realized the lights would not turn on and the door would not open. Ron then linked this while he arranged Toto to turn off the light during the investigation to put him and Onodera in the same role. Then the dome's ceiling was the only light resource in the whole dome. After Toto said "Onodera-san is lying right in front of the switch that opens the roof", Ron finally concluded that at that moment Onodera was trying to open the ceiling and pulled the switch.

Similar to Yuuichi's gun feat in the friendless game, Ron visualized the telescope when Onodera switched it on. When the telescope started to rotate towards the stars it had been programmed to observe. At the same time, the fishing line tied to the top of the telescope grew taut and pulled the gun trigger, and it fired into Onodera-san's back.

The last thing Ron found out and confirmed because of what Unno-san said when Princess ori required her to bring the flashlights. "Everyone always makes me bring the flashlights! This is the third time! Look for them yourself!" Ron at that moment finally confirmed that the culprit was Jumonji, because if he did not know the dome was all dark, he would not have arranged for Unno-san to bring the flashlight before they were forced to open the door.

Poisoned Latte case <Chapter 14-15>

(Not a long and difficult case to solve, but showed Ron's ability on Hot reading and Perception)

Observation / Thinking speed / Deductive Rsn / Cognitive Rsn / Logical Rsn / Experience

When Toto and Monki went into the cafe that Ron was in, Ron observed that Monki was a reporter for the first time to see her (I know that is basic for every detective that Conan and Sherlock MTP also have the same abilities).

Ron observed that when Monki entered thes shop, her eyes went to the magazine rack before the menu, also her dress shoes are scuffed, which means she runs in them a lot, and she has a lot of business cards in her phone case, which is another mark of the reporter.

Thinking speed / Experience / Knowledge / Inductive Rsn / Self Awareness

When one of the guests was falling down, Ron arranged for Toto to call an ambulance and the police. He processed this quickly and judged that it was poison. The fact was, in the cup of the girl who died, the police found a capsule with traces of cyanide. Ron also knew that he was one of the suspects. He said that in that situation, there were only 3 people who could poison. Ron who made her the latte, and the two girls who were sitting with her.

Inducement / Thinking speed / LTM / Intuition / Perception / Observation / Psychology / Hot reading / EQU / Deductive Rsn / Analogical Rsn / Conceptual Rsn / Associative Thk / Linear Thk

When Ron realized that Toto struggled in the deduction, Ron dropped Toto's phone and gave him some hint for the deduction. They should check the victim's social media and the reporter's photos, which means Ron remembered Monki was taking photos before the case happened and knew that might be the evidence or point in this case.

When Ron saw the social media of the victim (Julie) and the picture of the latte that Julie drank, he knew how her personality was. To know how Julie's personality was, Ron observed that in all Julie's pictures in the social media account, she was always standing in the center of everyone, where she would most stand out and where she'd look the best. In here it proved that Ron has a good psychological knowledge and hot reading skills. By using the information of the social media he deduced that Julie would choose the latte that looked the best, without knowing that it was poisoned.

So Ron had found out the reasons why Julie would choose the different latte, then now he needed to find out what caused her to select that latte. Because the killer knows she must choose the one that is perfect. So here the things that the killer did is simple, she just needed to use her nails to scratch the two lattes without poison. Ron discovered it by just watching the phone behind in a few seconds. Linked with her personality and the latte that the eyes ruined, Ron concluded that the killer might be her friend Hayami. Because Ron understood that the personality of Julie might gain hate from others.

Mad Charmeleon murder case <Chapter 16-17>

Deductive rsn / Logical thk / Linear thk / Thinking speed / Intuition / Decompositional rsn / Conceptual rsn / Associative thk / Focused thk / Probabilistic thk / Insanity inducement / Analogical rsn / Hot reading / Knowledge / STP / VSI / LTM

While only using the short explanation from Toto saying about the case, Ron logically knew that they were not using a disguise, because it was impossible to change their own body type.

Before Ron arrived at the murder scene, he knew that Omito was in a bad condition, so he decided to help him. He understood the personality of Omito might be a perfectionist, so the things that he needed to do to raise his mind might be to do everything that was illogical, for example his tie was too long, the clothes still have the tags attached, the socks did not match etc.

This chapter is different from other chapters, it did not show any scene that Ron got triggered by hearing something, which means before he arrived at the murder scene he had already deduced what the culprit looks like by using only Toto's short explanation. Because of his identity, he needed to induce everyone to think on his way. He then asked everyone a question, why the college student in this case was wearing a suit. Here Ron did not even know the previous victims were also wearing suits, he was getting noticed by Omito saying his thoughts in this question, which means Ron felt strange on the victim in this case was wearing suit, proved that he had already guessed that every victims might have possibility to wear suit before he arrived the murder scene, based on his intuition and experience. "That's the key that will lead to the mad chameleon's true identity" proved that Ron had already deduced these kinds of stuff.

Ron also believed on his deduction when he was on the phone calling with Toto, that it was impossible to change his own body type. Based on his deduction, Ron knew that if that was not the ability to change their outlook, the only answer might be all of the victims are lying.

Using "all the victims were wearing the suit and college students", Ron deduced and saw through that the victims felt guilty about something. And if they excluded the college students because of job hunting or overseeing mock exams in order to hide something, the rest of the possible results might be the "it's me scam". Ron used his own knowledge which he learnt linked the fraudsters to dress in suits so they can impersonate bank workers and gain their targets' trust easily, and also the attacks happened during the day, which matches the time period in which a receiver would approach elderly people to avoid suspicion.

That means the culprit is someone who's connected with all the receivers, Ron deduced easily that there was probably some kind of trouble between them about money. So this could explain why the victims' smartphones were stolen. because the culprit needed to destroy the evidence of their contact with the fraud ring.

After Ron raised up Omito's mind, Omito deduced that the watch of the culprit was off, and Omito remembered that of the three, there was only one who was wearing a watch that showed the wrong time (here was not Ron's deduction, that's all Omito's.)

Based on the deduction that Omito made and his memory, Ron predicted where the culprit would go and the reason. Because the culprit made the mannequin hold the phone. Here proved Ron visualized all the things in the clothes shop when he got taken by the police / while he was inducing Omito to think in his way, and after that he could also recall it clearly and use it properly.

Yadagami-sama murders case <Chapter 18-21>

Deductive rsn / Cognitive rsn / Divergent thk / Resourceful thk / Thinking speed / Problem solving / Observation / Analogical thk / Hot Reading / VCI / Critical thk / Perception

So first Ron solved why they witnessed the “Yadagami-sama”. That night, after witnessing it, they ran over the hutt, then Ron accidentally dropped his tube of brown sugar syrup and stained the tatami floor. But when they went back there, there was a large gap between the tube and the stain. Ron observed it when Spitz said there was a white snake along the river. Here the things that we need to know is, the reason that Toto and Spitz knew how the trick is complete was based on the rock and the explanation from Ron.

It is important because Ron was in a low evidence situation to conclude the trick. The fact is, when Ron watched his tube of black sugar syrup and the stain, he observed that the distance was weird between it. Then he asked what’s the exact location when the police found the black sugar syrup, when Ron knew it was the same location when got picked by the police, he knew that's how the trick was going on.

At that moment he still did not know there’s a rock in the river, but Ron still used the reason of why his black sugar syrup was in a different location than he expected and the ‘bam’ sound they heard to deduce how the trick was.

The culprit stood that mat on end, attached the picture of a scroll of yadagami-sama that’s usually in the shrine, and held it in place with the string. They pinched one end in the front door’s frame and tied the other to a rock which dangled outside the window. When they opened the door, it released the string, which fell into the river. And the Tatami fell into place on the floor. That was the source of the loud sound they heard.

The reason that the brown sugar stain and the tube were separated was because the tube slid down the tatami mat when the culprit lifted the mat to retrieve the scroll. Ron then knew the culprit was Mr. Mayor, because the culprit tried to contrive an impossible crime so no villagers would come under suspicion. To the end, they needed a witness for their trick, and the one who made sure they were in the room was Mr Mayor.

Ron also knew that when they said the scale-like mark on the victim’s neck and mentioned “the one we saw coiled up last night”, people might associate it with the victims, but Mr.Mayor blurted out it was yadagami-sama which means he knew about the picture scroll.

The timing that Ron discovered the rope was different might be when they start searching everywhere, but although at that time he still could not deduce out the truth, he kept it in his mind.

Observation / Perception / VCI / Problem solving / Inductive rsn / EQU / EQP

While Ron arrived at the village or after they witnessed the murder scene, he still did not forget to find Spitz's brother. He observed that when they first saw Mii making an offering at a shrine, she used an insulated bag. Although he felt strange about it, he thought that maybe she was bringing food to whoever was living in the mountains.

When Mii saw Spitz, she said “why are you here”, Ron knew that the person she was bringing food to must look like Spitz, so it might be his older brother.

Also when Ron heard how Muroi lost consciousness in the mountains and awoke down at the foot, he knew that he might get supported by the people who lived in the mountain secretly, so Ron had already confirmed that Spitz’s old brother was living in this village’s mountain secretly and got sending food by Mii because of the love feeling from Mii.

Shibuya Revelation Serial murders case <Chapter 22-27>

Knowledge / Intuition / Observation / Perception / Thinking speed / Deductive rsn / Cognitive rsn / Systems thk / Reflective thk / Convergent thk / VSI / FRI / Linear thk / Sense / EQU

When Ron and Toto discovered the first murder scene in Shibuya, Ron sensed that this case was different from the previous case they met. Ron knew the words that were left on the victims is the revelation of St. Johan, and this quote might be one of the most important things in this arc.

Ron got the conclusion of how the victims got murdered by just listening to the time of when the victims died and observed the victims gripping onto something tightly. Normal people might think that the culprit succeeded in this murder when the security was patrolling the roof. However, Ron deduced that the culprit committed the murder before the closing time. He suspended the victim from this arch, but they did not hang him. The culprit made the victim support his full body weight by himself directly over the sword-like unicorn horn. Therefore it explained why the victims gripped ‘something’ tightly. Because he needed to hold on to make sure he was not falling, but eventually he could not hold out any longer.

The thinking process of Ron might be when he heard the time when the victims died and the sensors, he deduced that the time of the culprit committing this murder might be before the closing time, the rest of the thing he needs to know was how the victims got murdered. After discovering the action of what the victims did when he died, linked with the murder scene’s characteristics, Ron deduced the timing and the method the culprit used for the murder.

After noticed that the police discovered a scar that looks like a burn on the nape of the victim’s neck, Ron realized that this case was linked to the M family by understood the passage of the plate was the same as the wound that the M family left on his neck, the revelation chapter nine, verse six. Also, after what Anamiya said, Ron concluded that the 0 10:00 was announcing the next murder, Ron understood if that was an organization infighting and sensed the killer’s anger and brightness through this cruel murder method. Ron knew the victims biggest mistake was making the cryptocurrency theft widely known. If there was someone who had their eye on the enormous profit they made from the theft, then they’d be engaged over that massive loss, and their wrath would fall on the entire hacker group.

Intuition / Decision making / VSI / Lateral thk / Associative thk / Analogical thk / VCI / PSI

Ron and Toto both thought that the ‘zero’ refers to the location, but Ron sensed that the M family would not make this easy to solve. During the conversation with Chikiori, Ron is still thinking of the ‘zero’ from the M family. He remembered that the zero in ‘10:00’ also has a diagonal line in them, and the numbers look similar to ‘zero’ to the left but the four corners aren’t connected, which was bugging Ron. Therefore, to find out this, Ron did not follow Toto to the Shibuya bus station. After Ron heard the people say “avoid touching”, he realized that the ‘zero’ was not representing the number, he linked with the Shibuya scramble crossing because of the four missing corners are the areas where there’s no pedestrian paint, which means Ron even visualized the places that might be suitable for the unconnected four corners zero and he eventually found out the Shibuya was the right one.

When Ron asked who arranged the hacker, he answered that the name of “he” was called ‘Marryito’. Ron then knew immediately that all letters in the Marryito can also paste as ‘Moriarty’.

Perception / Perceptual rsn/ Knowledge / Thinking speed / Focused thk / Acting skills / Deception / Critical thk / Abductive rsn / Deductive rsn / Cognitive rsn / Decompositional rsn / Convergent thk / Observation / Connecting the dots

While in the hotel, Ron observed the light that the chandelier was projecting onto the ceiling. After the ‘saving’, Ron linked the things that just now happened and the backstory of Haydn's 96th “the miracle symphony” which he realized that the case had not ended yet. Here means that Ron had not discovered that the hacker was Winter.

However, after Anamiya said the metal in the tip of the arrow the murderer used at the scramble crossing was Iridium, it’s not like it’s any more lethal, but they chose the rare metal, Ron deduced and remembered that when they heard that whooshing sound before the arrow struck the other hacker chest, they assumed that the killer fired it from a far way. But Ron knew that having a smokescreen was unnecessary to fire in a far way. Therefore Ron concluded that the smoke benefited the killer to perform a close range assassination means he stabbed the victim with the arrow while gripping it in his hand, the camouflage was the thing that he used a whip to make it similar.

After this, Ron also deduced that the hacker was the real killer. The timing might be after the chandelier dropped down made him confirm that the hacker was the killer, but this deduction might start from when Ron heard the phone call of the hacker and the culprit. Ron realized that the reason they were able to figure out that it referred to the Delta Hotel was because they overheard the hacker’s call from the culprit. Ron also observed that the conversation was one-sided which means it was probably a recording. After the chandelier dropped, Ron felt the hacker’s movements in the hotel were being controlled, plus the timing of the chandelier was perfect. Ron deduced that it means that either the hacker was assisting the culprit, or the hacker was the culprit himself.

After these two deductions, Ron already knew the hacker was the culprit, so he decided to reveal his real face on the top of the Shibuya view tower (because the symbol for the helicopter).

Verbal rsn / Thinking Speed / Deductive rsn / Analogical rsn / Linear thk / Resourceful thk / Inductive rsn / Decision making / Inducement / Prediction

After hearing Winter said “you have no idea I’d enjoy killing you now if I could” and “we will give you the true despair”, Ron deduces that Anamiya and the real hacker have not died yet, because of the “a detective’s despair” means being unable to solve a problem you thought you could, or being unable to save a life, which also means the plate’s code still hold a mystery for them. By linking their phone was Winter handed to them (which could set it before), and Winter also concealed the actual from their view (the explosion of the enormous screen that showed the time), Ron concluded that the time in their phone was faster than the real time.

The timing of Ron knowing that he already ‘won’ in this battle might be after he realized Anamiya and the real hacker haven’t died yet. It’s because Ron knew Spitz kept listening to their actions, so the things he needed to do might be to find out the real place where they were in 4 minutes to make Spitz go to rescue. Ron knew that in this case all the things were linked to ‘9’ and ‘6’, so they needed to find out everything possible linked with these two numbers. After the indirect hint from Toto focused on Ron’s neck, Ron finally deduced that the only person related to ‘96’ around here was him, and that means Anamiya and the hacker were in this building. Therefore Ron knew that the one who kept listening to them, which was Spitz, could go to save them immediately.

After Ron saved them successfully, he tried to know more about the M family. He asked if Winter is related to the crime king Moriarty. After hearing Winter answer “Why would I answer that”, Ron confirmed that he was, because if Winter was the hired hand, he should have a response prepared, either pretending to be part of the M family or denying it. Before asking that question, Ron had already predicted how might the M family member may answer this question which made him confirm Winter was one of the M family.

Midsummer beach hut drowning case <Chapter 28-30>

Inductive rsn / Cause and effect rsn / Observation / Critical thk / Thinking speed / VCI / Focused thk / Probabilistic thk / Convergent thk / Motivation / Inducement / EQP

When Ron and Toto discovered the victims, he already knew this was a murder, which means Ron observed that the victim was wearing the dry suit already and knew that basically is something that divers and boaters wear. Also observed that the dry suit was a bit bigger which means there was a possibility that the dry suit was not the victim’s shirt, concluding that it might be a murder, based on the evidence he observed and his sense.

There was also some kind of scene that could prove out Ron already deduced the culprit was the shopkeeper. Before they were checking the corpse, Ron had deduced in a way that maybe the victim happened to pass out in front of the bench hut owner, then he may have just left the victim within reach of the waves. Although Ron rejected this deduction because he observed the victim’s mouth was so clean, this deduction could prove out he already put the shopkeeper in a culprit place because this deduction needs the shopkeeper to put the victim on the beach.

Also when Ron, Toto and Mofu came to shopkeeper the boss that someone died, Ron told the shopkeeper the details of the victim. Basically through the previous chapter these things should be done by Toto, but Ron did this in this case, which proved that Ron needs more evidence to make everyone believe the shopkeeper was the culprit, because at that moment the evidence they only had the dry suit for prove, which was not enough. Ron induced the shopkeeper to say something suspicious, for example he said the victim was swimming last night, Ron then used “He was a surfer, but he wasn’t surfing?” to make Ron observe the cringe face of the shopkeeper and also said “by the way, how did you kill him?” to make the shopkeeper feel nervous.

After the shopkeeper said to Toto that his alibi was a perfect alibi, Ron observed that it was strange too because the shopkeeper did not even know the victim's time of death, therefore how come his alibi was so fit with the victim's time of death.

Deductive rsn / Analogical thk / Associative thk / Reflective thk / EQU

Ron linked that there’s no shaved ice to sell and to the salt he discovered that was inspired by Mofu sensei. Ron discovered that there were not many people on this beach, but the shopkeeper said they sold all the shaved ice, which means he used the ice in another way. Ron remembered there were chilblains on the victim’s hand, which means it could be when he died his hand was in a cold temperature. Therefore Ron deduced that the shopkeeper used the ice to make an ice raft. The reason that the victim wore the dry suit is because the shopkeeper needed to avoid any signs of chilblains or marks from the rope. Also he used the salt to combine the ice blocks together into a large panel, Ron knew that salt would decrease the freezing point depression, and the shopkeeper could also use the ice in his shop to apply the pressure on the block, because he used the smooth surface of professional gradient ice to make the raft, so it could more possible than the home ice.

After all that, Ron deduced the shopkeeper tried to make the victim look like died when surfing, so he might go to his inn to look for his surfboard. But he didn’t know which one was the victim’s so he gave up. Here Ron already understood how the personality of the shopkeeper was, so deduced that he might forget to wipe his fingerprint.

Genius composer kidnapping case <Chapter 31-34>

Observation / Intuition / Thinking speed / Linear Thinking / Deductive rsn / Decompositional rsn / Social skills / Convergent thk / Guesswork / Inductive rsn

While Ron and Toto arrived at the concert, Ron sensed and observed that there was a guy that was weird. Ron observed that the guy has two smartphones with different earpieces in each ear. On one he’s watching a video of a master craftsman making a plate, the other is a first class ballet. Ron also discovered that his watch and shoes look plain at first glance, but they are actually premium brand goods. After Ron said all that stuff to Toto, he had said “but what’s most interesting of all is..” which means Ron had already deduced that guy was the talent kidnapper ‘hummingbird’.

Therefore after Ron confirmed that guy was the talent kidnapper, he went to talk to him and acted that he just deduced that he was that kidnapper to test his reaction.

(I skipped the deduction of how Ron acted he was deducing the talent kidnapper because here I think it was a guesswork so that deduction may finish while Ron observed the characteristic of the weird guy he sensed)

Ron then deduced the greeting card from the hummingbird could be possible to get in if it had been hidden somewhere before the concert set-up, such as a gap in the sound system.

Intuition / Thinking speed / Non-linear thk / Divergent thk / Inductive rsn / VCI / EQU / Observation / Lateral thk

We all know that Hummingbird wants to give his daughter a chance to meet some genius that had the same experience with her, that's the reason why Hummingbird kidnapped the genius. Ron had said to the Police officer Sanno (aka Hummingbird), "maybe deduction talent then… But I already know that's the best in the world, I don't need the likes of Hummingbird to tell me that." Here could prove that Ron deduced why the Hummingbird kidnapped the genius with no evidence, because he knew his 'genius deduction talent' could not impress the Hummingbird. Ron concluded Hummingbird was not in a bad purpose was when he heard Toto said 'none of the victims have filed a criminal report', which then Ron arranged Toto to contact with Chikori to investigate something, and he found out that all of the genius could make a masterpiece after got kidnapped, which Ron deduced and concluded Hummingbird was not in a bad purpose to kidnap the genius.

After Ron let the Hummingbird escape, Ron deduced why his daughter cried when saw the geniuses when she watched the Tv, not because of getting touched. It was because she felt the same pain and loneliness from the geniuses. Because of that, after the geniuses met with Hummingbird's daughter, they all revitalized.

VCI / Observation / Decompositional rsn / Deductive rsn / Critical thk / VSI / EQU / Linear thk / Associative thk / Systems thk

Ron and Hummingbird deduced that Mutsubashi was the real songwriter Nyo-Nyon san after hearing she accidentally said "the level is too low", because Ron knew referring to the volume as its 'level' is a phrase that only someone knowledgeable about music would use. Also Ron observed that Mutsubashi never once near the open windows on the top floor, and after the kidnap she arrived too late because she did not want to close to the windows. Ron sensed that it was unusual that a manager wouldn't bother to check the room where her precious artist was last seen. Therefore after that Ron concluded Mutsubashi san must be the real Nyo-Nyon san.

Then Ron also deduced how the singer was kidnapped. The timing of Ron deduced this might be after he knew Mutsubashi san was the real Nyo-Nyon san. Because if he confirmed that singer on the top floor did not afraid of height, Ron knew that when the fire alarms started going off, and the singer heard the fire started directly below her, she knew the door on the stairs was locked, and that tower survived the previous fire, so as her fear released, it would make sense that she'd look out the window.

To make this deduction correct, Ron had already deduced that the police officer Sanno was the Hummingbird when he used his deduction to make everyone believe Mustubashi san was the Hummingbird, but Ron observed that his deduction had a bug. Ron also confirmed that after knowing the singer was not the Nyo-nyon san so he knew the Hummingbird must change his target by using his "police officer" identity to kidnap Mutsubashi san freely. Therefore he deduced the singer saw a group of police officers holding a stretchedout curtain and yelling "hurry" to make her jump down by herself.

Psychological Research lab murder case <35-37>

PSI / Thinking speed / VCI / Observation / Numerical rsn / Convergent thk

To search for the evidence, Ron read all the articles of Professor Aoe. Here showed that Ron used only a half of the day to read it all and also the articles from other people. Let's say Professor Aoe had 10 articles. Normally the time to read a scientific article needs 3-6 hours to understand it. Let's say it is 4 hours for a normal person, it needs about 40 hours to read all Aoe's articles with no rest. In this case, Ron read all Aoe's articles plus other people's articles, he just spent about a few hours reading it all (the girl said a half of a day but there's nonsense that the police stayed there for 12 hours). Also, after reading all the articles, Ron also needs to compare them all together and he found out Aoe's research data was extremely clean, which he deduced was a forged research data.

Observation / Critical thk / Systems thk / Info gathering / Focused thk / Hot reading / Analogical thk / Cognitive rsn / Deductive rsn / Creative thk / Inductive rsn / Associative rsn / Decompostional rsn

Ron then got notified that the lab just received a letter from an unknown sender that was a threat letter and the review of the three students. According to the letter, Ron knew that the culprit knew Himeno would use the lab in the morning. And after the review of those three students, Ron knew that they used a lottery feature in a messaging app to determine who could use the lab in the morning including Himeno. When he knew the MRI was a high maintenance cost, they needed to keep the operating ratio high, Ron linked with Professor Aoe. At this moment, Ron had already suspected Aoe.

Ron kept thinking that was weird because the threat letter arrived after the incident already happened. Standing in the culprit role, Ron thought if the time that the letter was sent after Himeno's death, it could not make her frightened anymore. After the reading of the timetable showed who used the lab, Ron knew professors Maruyama and Aoe used the lab a lot one month before, then they started to use less than before as Maruyama went on overseas work. Instead, Himeno, Oigawa, Niki and Imai started using the lab a lot, which then deduced that the culprit mailed the intimidation letter for each person who could possibly use the lab, and they were Himeno, Oigawa, Niki and Imai. Then after the culprit knew Himeno who died in the explosion, the culprit selected the letter and gave it to the police, to misdirect everyone who thought the culprit's target was Himeno. Therefore Ron concluded the killer was Professor Aoe because he was the one who gave the letter to him and Toto.

Ron understand Aoe's personality after all deduction. Using what he observed in all his articles, Ron knew Aoe did everything in a perfect way and over ambitious, which could make him more desire to do on the research for win against Professor Maruyama. Ron even remembered the date that most of Aoe's articles were published in the time that Maruyama was in an overseas job, so Ron deduced that extremely clean data was because that was made up by Aoe.

While there was an argument between Oigawa and Ima, Ron knew that Himeno told the university Oigawa erasing the data. And after he deduced the culprit was Aoe, Ron concluded his aim to plan this murder. Because Aoe knew his data was forged research data, so it was a kind of threat for him. He decided to erase that data before the university began to investigate the computer because of the action from Oigawa.

After looking at the timetable that showed the people who went to the lab, Ron inferred a few things. He observed that Aoe had gone to the MRI lab last night, but there's none of the participants for the experiment. Therefore Ron deduced that the reason Aoe went to the lab last night was to destroy the data in his computer. Ron also deduced that how could Aoe make sure the data was destroyed completely. He knew that the current technology could even fix the data that got damaged in a fire accident, therefore he needed to use the MRI's magnetism to completely erase the data. He wrapped the research room's computer in a cloth to make sure it would not stick to the machine, and then he took that close to the MRI. Ron then observed that before last night Aoe did not use the lab in a whole week, so Ron deduced that because Aoe valued efficiency as high, so he did not want to perform wasteful experiments.

Plateau Auberge serial murders case <38-45>

Observation / Deductive rsn / Perception / Linear thk / Analysis / Analogical thk / Critical thk

Ron could deduce every ability and identity of everyone in this trip by using the things he observed when he first met them. He discovered the pen light that Dr Clark dropped in the bathroom and observed when Clark washed his hands, he rolled up his sleeves and carefully scrubbed up to his arms, which was the normal action that a surgeon would do after finishing a surgery. Besides that, Ron also observed 5 other pieces of evidence to prove his identity, which proved Ron has impressive observation skills on other people and analyzes them quickly. After analyzing the identity of Bill Clark and Tom Sasaoka, Ron then also saw through Karen Lily's identity.

Observation / Linear thk / Probabilistic thk / Critical thk / Thinking speed / Abductive rsn / VSI

After the first victim Lenny Gardner's death, Ron and Toto were investigating the murder scene.

Ron firstly observed the surface of the ground outside was all torn up. But Ron excluded the possibility of the killer coming in through the window, as Ron also observed the window was locked. Ron also excluded Toto's deduction of the fact that the killer used the gap under the

door to come in, Ron knew that was also impossible because the door can be locked by pushing a button.

After Ron heard the chef Sakai said he could not get through the call to the police, even the landline, Ron then deduced the travel methods also got cut off because the killer made their phone unable to connect to outside.

Ron and Toto then saw the taxi driver Sasaoka tried to escape and run into the forest, they were then forced to catch him. Ron found out Sasaoka quickly and the location he stood was back of Sasaoka. To do this, Ron needed to visualize a certain part of the forest and infer the location Sasaoka would hide. Therefore here showed Ron good VSI skills and he also excluded the location that might not be possible for hiding which was also a thinking speed feat.

Observation / Thinking speed / Critical thk / Inductive rsn / Deductive rsn / Analogical rsn / Persuasion / Decision Making / Info gathering / Cognitive rsn / Decompositional rsn / Associative thk / Methods / Adaptability

Ron firstly concluded that reason and the progress of how the culprit killed Sasao. He observed Sasao's hair was wet and there was water splashed on four walls, which then inferred that he was getting attacked while bathing and struggled with the culprit. Ron then discovered the food coloring and linked that was the reason why the water was red when the knife wasn't removed.

After hearing Toto say the flower petals in the first murder scene, Ron then linked the food coloring and flower petals together, deduced that both cases were linked to the menu they ate in the first night. The flower petal referred to the 1st meal an edible flower salad, and the second red food coloring referred to the 2nd meal lobster soup.

Ron knew the cases that happened today could link with the case in 17 years before. And he confirmed that everyone was linked with the case. Therefore the things that he needed to do was made everyone say everything they knew about the case 17 years before. By using "still have 3 more dishes left" to persuade everyone to say the things they knew.

After knowing everyone was connected with the case 17 years before, Ron could easily link them together. For example, Dr. Clark was in the hospital when Sasaoka dropped off the researcher and the pregnant woman. By using the lock picking skills that Lily showed last night Ron inferred that she was also used by the culprit 17 years ago. After hearing all their talking, Ron could sort out the whole progress of the 17 years case. (I'm not gonna mention the details of the 17 years case because it's just a description in the manga) But here Ron used the concept of everyone connected to the 17 years case to infer something. He admits that Chef Sakai was just chosen to be a chef in this case. And Ron deduced that Mia was that baby in the pregnant woman's stomach.

Ron then revealed that he also has the skills of picking locks. And after hearing the recorder, it revealed that when Ron was small he could unlock one hundred different locks in a fast. Here showed that Ron had a great adaptability on learning things, because in the end of this

arc, Eliot Moriarty (aka Ron's father) had said that he would teach all the things he knew to Ron, which obviously include the skills of picking locks.

(Ron then experienced the second confuse stage in the manga, but still could do the deduction)

Self Awareness / Decision making / Deductive rsn / Cause and effect rsn / Observation / Associative thk / Analogical rsn / Probabilistic thk / Perception / Knowledge / LTM / Focused thk / Linear thk

In the situation that Ron just remembered the pieces of his father's memory, it obviously that Ron would be in a confusing mood. He decided to solve the case and this was the last one. Ron understood himself. He still aimed to be a detective at that time, so he could not allow himself who has the criminal blood in his body to be a detective, which was the most logical decision at that moment for him via his personality and his crazy feelings on deduction.

Ron knew that his father, who was one of the members of the M family, was getting involved in the 17 years case, which then inferred there was also some M family member in this case, like Winter in the Shibuya arc.

While Ron went back to the first murder scene, he discovered the blood outside the room, and inferred the possibility of Gardner being killed outside the room. Ron then discovered that types of the flower petals on Gardner's body were Bellflower, Tiger Lily, Cosmos. Ron then remembered the door was locked before they discovered the death of Gardner, so inferred that he might lock the door by himself if he got attacked outside. Ron also observed there are way too many flower petals than their room, so the culprit might bring the flower in, which proved Ron deduced that the mimicry was intended as camouflage to hide the dying message from Gardner.

And Ron also observed Gardner kept holding the Oniyuri flowers that he grabbed from the vase. Ron knew the culprit saw through the dying message Gardner wanted to say. Therefore, linked with the steps of the garden, the culprit pulled the flower. Ron then connected the balloon he discovered before hearing the recorder, inferred the culprit used the door gap and bursted the balloon that stored the flower grabbed outside, and also knew the culprit had the idea to kill everyone while making it resemble the previous evening dinner.

Ron knew Gardner did not know how to speak Japanese, so Ron linked with the english name of the Oniyuri - Tiger Lily to find out who was the killer.

By using exclusion, Ron focused on Tiger Dan and Karen Lily to find out who was the killer. Ron remembered that Lily has a skill of picking locks, so she did not need to use the balloon method to cover Gardner the flower. Therefore Ron confirmed that the killer was Tiger Dan.

In the murder scene of Sasaoka, Ron remembered that Chef Sakai had said he was going to get the wine for dinner. Therefore, for the culprit he did not predict that there was no wine left so he used the fire extinguisher to pretend the 2nd meal. Ron also deduced that Tiger could not break the wine because he knew he did not have enough shirts for change.

He was fighting with Sasaoka in the bathroom so basically his shirt was getting wet, so this limited him to using the wine to pretend the meal, instead he used the fire extinguisher, using strangulation instead of stabbing so Tiger could not get the blood on his clothes.

To do the last confirmation, Ron used the exclusion again. He excluded Mia first as she was the one who brought the most clothes here. Then he excluded Lily. First because of the picking locks theory. Secondly, he remembered Lily did not know Japanese after Lily was forced to leave and ignored the warning of Landslides, which means she could not read the fire extinguisher's label. Eventually Chef Sakai could get the corkscrew from the kitchen easily so he did not have the risk to use the fire extinguisher if he was the culprit. Therefore the one left was Tiger Dan.

Thinking speed / Analysis / Inductive rsn / Logical rsn / Lateral thk / Memory / Critical thk

After remembering all his memories with his father, Ron finally backed off. We could confirm that before that, Ron stopped thinking except for the deduction of the culprit in this case. Therefore, the time that Ron deduced this was extremely fast, by using what Tiger Dan said and his memory of what his dad told him, to deduce why M family needed to kill all people that were involved in this 17 years case.

Using Eliot Moriarty was affected by her wife to be kindless, Ron deduced that his dad did not kill Dr. Gore. Ron remembered the stages of his dad's plan 17 years before and he observed that the reason why he had the professor taken to the hospital on the way to the warehouse was because of swapping the dummy corpse with the professor in the garden. Ron then concluded that at that time the M family was getting tricked by Eliot because the real professor was still alive. In this deduction, Ron is just using the weird part of his dad's plan and knowing his dad's personality to infer all the things, including the reason why the M family decided to kill all the people involved in this case.

Furtuneteller Prince murder case <46-48>

Perception / Deductive rsn / Inducement / Intuition / Inductive rsn / Critical thk / VCI / Probabilistic thk

From the beginning, Ron did not decide to trust the fortuneteller prince at all. Therefore when the fortuneteller prince took Toto's book to sign, Ron deduced that he searched Toto's name by using a smartphone that was hidden behind the folding fan, which proved Ron has a good observation to catch out the eyes action of the fortune teller prince.

After the fortune teller prince said he could help officier Ishikki in this murder scene, Ron confirmed that he knew Toto was an officer before. As basically he should not know Toto is an officer if he did not say.

Here Ron had already suspected the culprit was the fortune teller prince due to his fake 'seeing through people' and the nonsense of he knew this scene was a murder scene.

Observation / Inducement / Memory / Inductive rsn / Decompositional rsn / Deduction rsn / Systems thk / Cognitive rsn / Thinking speed / Decision making / STP / Strategy efficiency / Prediction

While Ron decided to find more evidence to prove the culprit was the fortune teller prince, Ron discovered the remote of the air conditioner did not put in the batteries, also knew that the fortune teller prince was the same constellation with Spitz, which he remembered Spitz ordered a whole black color drink today.

In the situation that low of evidence, Ron inferred that the culprit had lured the victim to the courtyard and killed her, which then indirectly induced the fortune teller said that could been killed in the room and moved the victims outside the courtyard, which Ron then rejected what the fortune teller said kimono would have been torn, he knew that someone wearing a kimono could have easily repaired a bit damage to it.

After hearing Spitz said “but that’s too short to wrap around a neck”, and gathered all the evidence he observed before, Ron sorted out all the things. And set up a strategy and short-term planning to induce the fortune teller prince.

Firstly, Ron knew that there were no batteries in the remote of the air conditioner, so the batteries might have gone elsewhere. He even remembered that the fortune teller refused to drink anything after he ate Ron’s extremely sweet brown syrup chocolate, and at that moment there was only a bottle of coffee on the table, which then Ron deduced the fortune teller used the batteries to make the ribbon sink it to the bottom of the coffee.

After all his deduction, Ron decided to set the strategy to make everyone know the fortune teller prince was the culprit. He first exchanged the coffee and told the fortune teller that the original coffee was exchanged to do a test of the victim’s dna. Before that, Ron needed to induce him to drink something. Therefore, he decided to surround his room with a warmer to make the temperature of the room rise, forcing the fortune teller to drink something. Ron predicted that he might not drink the coffee, instead would drink the tea, so he arranged for Spitz to tell he drunk the wrong one because he got the same constellation with the fortune teller.

However they actually did not find any DNA or other exclusive evidence in that bottle of coffee. That’s all Ron decided to induce the fortune teller to say all his purpose to do this murder.

Severed head balloon case <49-50>

(A short case but showed Ron could still finish a deduction in a short time while he was feeling extremely sleepy)

VSI / Observation / Thinking speed / Linear thk / Cause and effect rsn / Deductive rsn / Perceptual rsn / Systems thk / Associative thk / Inducement

After just hearing the information of this case from Toto and Anamiya, and also observing the environment, Ron had already deduced how and who was the culprit in this case.

Ron believed that should be something cause the head moved through the air, so he decided to look through the environment around him, plus he remembered Toto said there was a drone in the evening, Ron inferred that the culprit created a slide situation that an angle between a high and lower place, to string a wire between a tall building and a lower one, and suspended the head from it, then when it passed over the shopping mall, it would appear to be floating in the midair.

Plus the drone he remembered, Ron linked, said that the culprit used the drone to carry the wire between the buildings. And also after seeing the image Toto gave him, Ron deduced the culprit was Tonami. Ron linked the case of the murder CEO Omoda with this case and inferred the killer of the murder Omoda was the same person in this case. He concluded that it was Tonami because he was the one who lived directly across from the north side of the building, after seeing the image and visualizing the 2 two buildings.

Extraly Ron also inferred that was a critical situation because of the high security he could not bring the body outside, plus there had been an investigation request and police would be inspecting that night so he must try to take the body out in another way. He then chose to use the drone and wire to take his head out.

After all that Ron left and got revealed later he was in an extremely sleepy situation as he went out to find Toto when he fell in an all day sleep (that's not enough for his medication), he also anticipated the next case would be significant for him.

Twin Prison locked room murder case <51-57>

<1st murder case>

Conceptual rsn / Convergent thk / Critical thk / Knowledge / Memory

In the first case, after Fin Fennec discovered the foamed styrol in the chimney by using her phoenix touch, she had already solved this case, which Ron had not linked to anything else. This is also due to the limitation of the investigation of Ron as he could not do as much as he can while Fin is here.

Therefore it means that he could not compare the images between the Fin's and the family's. However, Ron still did some of the deduction in Fin's speech. After being notified that the wall was closer in the family's photo, Ron inferred that Fin deduced it by using the sunlight along with the use of the foamed styrol: in this case could be a dummy wall. That's why there was a change in the sunlight.

That was the first battle between Ron and Fin in deduction and he lost in this battle. After the first case ended, Ron tried to infer again the Sun Prison murder case 70 years ago and he could recall the details clearly to Toto.

Focused thk / Deductive rsn / Conceptual rsn / Perceptual rsn / Decompositional rsn / Info gathering / Lateral thk / Critical thk / Reflective thk / Memory / VCI

In the second case, Fin did not discover anything new, unlike the first murder case, Fin accepted Ron to investigate after listening to what Toto said. Fin decided to investigate the Shed, but Ron decided not to follow. Ron knew that if the top BLUE locked room instructor did not discover any new physical evidence, the point of this point might be caused by another factor.

Here showed the differences on how Fin and Ron solved cases, in which Fin more relied on the physical results while Ron more relied on knowing the psychology of the culprit, maybe it was due to his Moriarty blood. The different style of investigation could make out the significant differences on the speed on how they sort out a case in a different situation.

During some speaking with Youko, Ron knew her servant did not give her treats, so Youko needed to eat Ron's dessert secretly. After Ron heard Youko said "on the same side", Ron linked that the culprit in this case used the magnet to complete this locked room. Ron knew Fin could not solve this because she could not discover any magnet in the door.

Using his knowledge of science, Ron knew the culprit used a neodymium magnet inside the brass bar, and covered it with brass and polished it with no sign of tampering. Then after Junji was killed, the culprit used the magnet to stick the bar to the steel door and left the room. Ron knew that the reason for Fin did not discover any magnet because the culprit did a blow torch on the magnet, and magnets have something called a curie temperature, and when the neodymium magnet was burned in 330 degree, it forever lost its magnetization, and then the bar will drop to lock the door.

Ron then knew the second murder case could be a copycat of the 70 years case, as Ron knew there was not a large usage of magnet from 70 years ago. Ron inferred Sakanoue servant was the culprit in this case. Ron remembered that she was holding her right hand on top yesterday, which showed Ron's perception and memory. Compared to today, she was holding her left hand on top, which means she got an injury on her left hand due to being unfamiliar with using the blowtorch. Ron inferred why Sakanoue needed to plan this murder by observing the action of what she did to Youko. The reason that she always hides Youko's sweets is because she tried to protect her. Ron concluded this after knowing she did not care if Kiyotaka ate instant food.

In this battle Ron won extreme difficulty as Fin also inferred this trick but she needed to confirm it by using the X-ray. The reason that Ron won was because he even deduced who was the culprit in these two cases while Fin only deduced the method of what the culprit used.

Associative rsn / Thinking speed / Analogical thk / Abductive rsn / Divergent thk / Lateral thk

Ron also deduced the Sun Prison case from 70 years ago after he deduced the Moon one. To prove that, Ron had tried to stop Fin after the second case ended, but he fell asleep unfortunately because of the medical.

Ron knew that the Moon Prison murder and the Sun prison murder basically were the same, he did not mean the method was the same but the aim was.

Ron first confirmed that the one who killed the husband was the wife's missing lover due to the fingerprint evidence. But Ron also inferred that the lover did not leave the room after he killed the husband as he turned into an ash in the fireplace. Ron stood in the lover's view to deduce that his aim was to give the wife a better life by killing the husband because the wife was annoyed by his eccentric behaviour and could use the insurance money of the husband's death to make sure the wife did not have the problem of money. Ron concluded that after linking to the large amount of the ash in the fireplace, the wife also agreed so she used the gap of the police officer to call for the support she carried away her lover's bone. Fin could not solve this lock room case because she never stood in the view of the victims or culprit to solve the case which was the significant difference between her and Ron.

Invisible blood letter murder case <60-62>

Thinking speed / Observation / Deductive rsn / Critical thk / Associative thk

After hearing about some knowledge about the position in archery, the oomae, niteki, naka and ochi, and also observed the position of the victim's finger pointed to, Ron deduced the culprit was Nakamae sensei.

Ron deduced how 'finger' proved Nakamae sensei was the culprit. He knew that there are five names for the position of archery. Ron observed the victim's finger was pointed to the 'Niteki', and he excluded the possibility of the culprit being involved with the 'Niteki'. He then inferred there is an alternative way to call 'Niteki' as 'Ochimae' because Yonteki comes before Ochi. And using this method to think, 'Niteki' comes before 'Naka', so the message the victim wanted to say was 'Nakamae'.

Self Regulation / Abstract thk / Divergent thk / Abductive rsn / Cognitive rsn / Emotional Understanding / Perception / Thinking speed / Long-term memory / Observation / Inducement

Ron, still confused to believe Nakamae sensei was the culprit as she was devoted to archery and she committed a murder that would stain the honor to her. Therefore Ron still kept the possibility that there might be other reasons for why she committed the murder.

After hearing Nora say that's a lie, Ron finally deduces why Nakamae sensei decided to commit the murder. Linking back to the poor arrow and the different sound of the arrow, Ron understood the arrow that Nakamae used was a weaker bow. Therefore he inferred Nakamae was in the middle of a stomp situation.

Ron understood Nakamae did not allow herself murder other people by using archery, the things she spent her whole life doing. Therefore she created the situation to make everyone think she killed Kotegawa on purpose by creating Kotegawa to make a death message.

Ron inferred the arrow was roughed up from scraping the ground after she missed the target, and weaker bows were used for correcting the form, and she shot on Kotegawa accidentally during the practice.

Also, Ron remembered yesterday Toto shouted to Nakamae on her left hand side but she did not react. Ron also observed she would tilt her head to the right while listening to other people, which means she could not hear out of her left ear. Therefore Nakamae could not hear Kotegawa's signal to get the arrow. This deduction required Ron's observation and recalling accuracy which needs good memory skills.

After all, Ron also inferred that Nora could see through other people's lies while there were crows as he was in a state of extreme nervousness which caused his power of insight to skyrockets. To test this, Ron said 'you can help Isshiki's deduction if we meet again' when there were crows to confirm his guess.

Coin and carving murders case <63-67>

Observation / Perceptual rsn / Deductive rsn / Critical thk / Vertical thk / Knowledge / Decision making / Intuition / Anticipation

In this chapter Ron reveals that he also had the close or same anatomical reasoning skills to the best Anatomy teacher in the world Dr Hilsch. Ron had a quick deduction of the dead body after just having a look. He deduced that the sign was carved after the victims died because there are no visible signs of life responses such as clotting. He also inferred that the victim was being killed elsewhere because he observed there isn't any dirt from his riverbank on the soles of his shoes.

After another murder case happened, Ron observed that it was something weird as Dr Hilsch could also discover the death scene without Toto's notification. (Basic observation) Therefore Ron suspected that Dr Hilsch was involved in this case which he decided to use this opportunity to see through his real personality and tried to gain any evidence of the Blood field trip case. Ron also anticipated that Dr Hilsch would throw the crime scene into disarray.

Thinking speed / Info gathering / Emotional understanding / Cause and effect rsn / Deductive rsn / Lateral thk / Critical thk / Analogical thk / Convergent thk

Ron understood that Dr Hilsch would not do anything with no meaning, which then he needed to think about what Dr Hilsch took out when they were doing the autopsy. After linking to Dr Hilsch could find the death scene without notification, and he remembered when the carving case was started, Dr Hilsch also doing the speech in Tokyo at the same time. Ron concluded that the one who carved the number was Dr Hilsch. Ron also inferred that aim for Dr Hilsch doing that because the numerals of the victims' abdomens would mark them as part of one case, which also means Dr Hilsch was not the serial killer in this case. Ron concluded all the common points in this case after discovering Dr Hilsch was not the serial killer. He deduced that the coins in the victim's body would make a case for performing an autopsy every time. Also all the corpses were found in Tokyo which means they would all make their way to the same forensic scientist assigned to the case.

Ron then knew Nagaoka said he did not discover the numerals were carved at an angle was a lie, he should have known before why the numerals were carved at an angle. Yesterday after Dr Hilsch heard that and left the autopsy as he needed to investigate all bodies of the previous victims, he found out that all of them had suture scars from appendectomies and their appendixes were missing. But Ron did this deduction without any investigation based on his knowledge and he inferred the victims had done the appendectomies before after he heard what Nagaoka said.

The next deduction proved why Ron inferred without any investigation. Ron knew that these days appendicitis tends to be treated with endoscopic surgery, which does not leave any scar. Ron then inferred the victims underwent surgery about twenty years ago because based on his knowledge, appendicitis most commonly appears between one's teens and twenties. So that's why all the victims were above 30 years old.

Ron also knew there was another case that linked with this case (if without that case, Ron could not deduce the aim of Nagaoka). He was linked to the gastrointestinal surgeon murder case, and he performed the appendicitis surgeries for the victims in this case. Here showed that Ron had a fast information gathering as he also investigated that the gastrointestinal surgeon was a university classmate with Nagaoka. Ron concluded that Nagaoka was seeking something, because that gastrointestinal surgeon had stowed something inside the victim's body during the surgery.

Ron also understood all the purpose of Dr Hilsch's action. The reason that Dr Hilsch prepared a corpse for the dual autopsy was because he wanted to keep Nagaoka from getting his hands on his victims, and the decision to forego the CT scan was to prevent him from getting any evidence about the items he searching for, he chose Toto for his assistant because he had considered the risk of Ron could affect his strategy based on his observation.

Obon dance murder case <68-71>

Inductive rsn / Deductive rsn / Analogical rsn / Cognitive rsn / Critical thk / Lateral thk / Anticipation / EQP

After discovering the artificial finger nail, Ron inferred two things. First, he inferred Hiiragi was the culprit in this case by gathering all the evidence together. Second, he inferred the aim of the Hiiragi to try to murder Haruno San. After Toto received the call from the hospital, Ron anticipated that Hiiragi may come back to kill her. He then said, "we're in a race against time." means he confirmed the culprit is Hiiragi. If the culprit was other people, it might take more time to find the hospital. But if the culprit is Hiiragi, she could know which hospital was Haruno san in as she was Haruno's manager, which means she could kill Haruno san anytime. That's why Ron told them they needed to go to the hospital as soon as possible.

Ron understood that the reason for the blackout was because that was the time gap for Haruno san to do the costume change, which Hiiragi was her manager so she had a justification for her to hide under the stage which Haruno san would not suspect her. That's how Hiiragi could kill Haruno san without no one noticing. Ron inferred that the mask

Hiiragi used was not to block blood splatter, but it was for preventing the blood dripping down.

The false nail that was found on the stage was because Hiiragi got locked in the floor panel. Ron observed that Hiiragi mentioned the commotion over the gun is kinda weird. If she was outside, no way did she not know that was only a firework gun, which means she was in a locked room situation which could not observe the outside but could hear the sound.

Ron also inferred the aim of Hiiragi trying to kill Haruno san. He deduced the timing that Hiiragi decided to kill Haruno was after hearing Haruno san say the things about the festival incident that happened fifteen years ago, by observing her emotion change after hearing that. At that moment, Ron had a wild guess that she was thinking that some of the poisoned candies might have been mixed in with those.

Tragic Cruise Serial murder case <76-96>

This case is one of the arcs where Ron had used several strategies, planning, deception, and manipulation skills to win against Mylo and found out the culprit who framed him in the bloody field trip. Also, Ron solved the most cases in this arc. He had solved the serial murder case on the cruise and the bloody field trip, while setting up a plan and strategy to misdirect Mylo to make him lose, showing his thinking speed and recalling skills to sort out the case. In conclusion, the Tragic Cruise Serial murder case is one the highlights of Ron Kamonohashi.

Info gathering / Preparation process / Methods / Prediction

Ron knew that this cruise trip involved the bloody field trip, due to the letter from Mylo Moriarty. Therefore Ron confirmed the four suspects Fin Finnec, Dr Hilsch, Elmer Stingray and Shachi will be in this cruise also. As the information from Winter Moriarty, Ron discovered that all of them could be the culprit in the bloody field trip. He remembered that there was a third party's blood on this vest after the trip, therefore he decided to use the DNA to find out who could be the culprit. He knew that this cruise trip was the best chance to do it as the four suspects will be in the same location at the same time. He arranged Spitz to pretend to be the waiter and gave the drink to those 4 suspects to get their DNA from the glasses. After that pretended to be caught and left the cruise on purpose to do the DNA test. After the deduction of the serial murder case on the cruise, Ron called Spitz to check the result to support his deduction, and he knew the third party's blood on his vast was Elmer.

<First case>

Probabilistic rsn / Inductive rsn / Decision making / Anticipation / Deductive rsn / Critical thk / Convergent thk

In the bar murder case, Ron knew there was a request on the ship phone for the wine, and according to the waiter said that was sound like a mechanical male voice, Ron did thinking about the probability of that male voice was trying to make a misdirection of a female, but he was not confirm it yet.

After Ron's satellite phone and discovered the gun in his room (306), while also receiving a phone call from Mylo knew that a serial murder case would happen, Ron first decided to change his room. He knew that the killer who was arranged by Mylo could enter his room freely, so he decided to change his room from 306 to 301. This decision making benefited Ron in the third case.

Ron deduced that was an indiscriminate murder case for the first case. With the discussion with Toto, he knew the M family had the power to get the wine labels from any year, which inferred they could also poison in any anniversary year, and the victim was not targeted by the M family before he boarded the cruise, he was just get targeted when the M family learnt his birth, which no murder motive to the victim personally.

<Second case>

Thinking speed / VSI / Perceptual rsn / Deductive rsn / Systems thk / Vertical thk / Cause and effect rsn / Long term memory / Observation / Associative thk / Probabilistic rsn / Decision making / Indirect Manipulation / Coercion

After the second case happened and the discovery of the woman upstairs, Ron deduced how the culprit committed this murder by using the woman. Ron visualized the system of 2 floors, and the murder scene, he deduced that the woman indirectly killed the victim. He knew that the 2 women were grabbed by the culprit and used some poison to make them faint. After that the culprit tied one of the women on the edge and tied the other one to the railing, and also kept the woman over the edge falling and tied with the woman behind the railing. By understanding the emotions when the woman behind the railing would be extremely panicked, she might use the knife behind her (put by the culprit) to cut the rope, and so after that the other woman would fall down because of the cut off of the rope. Fin Fennec deduced the culprit using the swaying method to make the rubber plugs against the door, and this was one of the stuff that would support Ron in the future.

Toto suggested using the wine in the first case and gave it to the 4 suspects to taste it, to use this for testing them, looking for observing their emotions and actions. After Fin declined to drink the wine and Shachi drank it, Ron started suspecting Shachi. He remembered that in the first day party Shachi declined to drink wine and was drinking the juice, but he was guzzling the wine and decided to drink it this time and Ron inferred Sachi might be doing a double check for whether the wine was poisoned or not which was an action of protecting Fin. At this moment, Ron started to suspect Shachi and Fin.

After that, Ron decided to tell the M family things to those four suspects. The action was similar to L telling Light his real identity in Death Note, to limit the action of the culprit. Back to Ron, by locking them in the same room and revealing that they still had not found out the culprit could force the culprit hard to murder again on the cruise. By saying that to Elmer, Ron knew 'he' helped to aid Elmer when he was in the BLUE academy, but he still could not remember it, and this was one of the puzzles of the bloody field trip case.

<Third case>

Guesswork / Inducement / Thinking speed / Associative thk / Deductive rsn

While Ron locked them in the room on the sixth floor, they discovered the paper under the table, and Ron inferred the '01' represented the room number for the third victim. Ron decided to check the room that ends with '01' on each floor, and he arranged Shachi to take 301 a look. Remember Ron was hugely suspecting Shachi at that moment, and he also changed his room from 306 to 301 before so after he and Toto checked 101 and 601, they could go back to 301 and check if Shachi came. After that, they waited in 301 but they did not hear Shachi knock the door. By asking what Toto thought the 7 floors in this cruise was weird, he realized the '01' was not representing the room number but the word 'pool'. Eventually they went to the 7th floor and saved the victim. After hearing Sachi say he was getting chewed when he went to check 301, Ron confirmed that the culprit was Shachi in both the cruise serial murder case and the blood field trip.

<Vs Shachi + Deduction of the two cases> chapter 86

Anticipation / Verbal deception / Setting traps / Indirect Manipulation / Thinking speed / Deductive rsn / Critical thk / Decompositonal rsn / Probabilistic rsn / WMI / Vertical thk / Lateral thk / Emotional understanding / Systems thk / Associative thk / Abductive rsn

After all of them got fainted by Mylo and settled them in a show, the battle between Ron and Mylo began. Before Ron got fainted by Mylo, he had already deduced and associated the cruise serial murder case and the bloody field trip case that the culprit in the both cases was Shachi. When Mylo forced Ron to use the gun to shoot the culprit he had deduced, he actually anticipated that if he decided to reveal his real deduction on Shachi, it may be possible that Shachi would still act as faint. Therefore to induce Shachi to wake up, he set a trap for him. Ron acted when he inferred the culprit for the cruise serial murder case was Fin Fennec, at that moment Ron had already known why Shachi decided to help the M family. By using how Shachi treated Fin, Ron inferred the M family took Fin hostage, and forced Shachi to commit the crime in exchange for her life.

By using the point that Shachi must protect Fin, Ron faked Mylo and Shachi that he deduced the culprit was Fin Fennec. Ron here changed the content of his deduction to deceive them, like changing the second case that was not a method that a locked room would choose to that was a method of a locked room to deceive Shachi. Also, Ron had confirmed in the first case, the male voice from the voice changer was used to divert the attention away from the female aspect, which Ron decreased the suspects on Fin and increased on others. For the second case Ron is stranded in the culprit role to think. If the culprit was Fin sensei, there was no way she could have deduced that it was a locked room murder. For sure the decline of the suspects on Fin was after witnessing Shachi guzzling the wine to double check it was not a poisoned drink before Fin drank it. Plus the third murder Shachi did not arrive at room 301 to check, Ron confirmed Shachi used this time gap to go to the 7th floor to commit his murder.

At that same time, if Shachi was the culprit in this cruise case, then he should be also the same culprit in the bloody field trip. By gathering all the information and some creative thinking inside, Ron finally deduced the whole bloody field trip case. Ron inferred that if he

was not the killer in that situation when there were seven corpses around him and he was holding a knife, then it could be a time trick. The consciousness of Ron and the actual day of the crime were staggered by a day. He remembered that he did ask Shachi to give him the brown sugar syrup, and that it contained a sleeping drug. After Ron drank it, he was falling asleep while he was solving the homework. Then Shachi used this time to change the date on Ron's phone by a day. Therefore, while in reality only two days had passed, in Ron's mind he would think that was the day for practical exercise, three days later. The reason that Fin Fennec said he "didn't like myself" was because Ron took three days to solve the problem. But in reality it was because Shachi resubmitted his answer again a day later. And after that, Ron went to the warehouse of the practical exercise and lost his consciousness.

And this means Ron disappeared the day before the incident. Ron deduced that when he was unconscious, there was an imposter walking through the school disguised as him. Therefore that imposter would be trying to act like Ron, such as mulling over for Fin's homework and wandering around the library and other spaces. And on the day of the incident, the imposter was getting witnessed. The things that made Ron confirm there was an imposter while he was unconscious was Elmer's injury. According to the blood test he arranged for Spitz to check it, the result was that the blood on his vest was Elmer. Because Ron was unconscious, he could not help Elmer's injury, that was why he did not have those memories. But it would be possible if there was an imposter to help for Elmer's injury.

Explaining that it was like a locked room scene, Ron inferred the culprit was one of the people who got 'killed' by 'Ron'. He knew that the imposter moved his unconscious body to the scene and changed his clothes to Ron (that's why his vest contained Elmer's blood), and also threw his disguise mask outside the window. Then that imposter decided to stab his own chest with a knife, and he put that knife onto Ron's hand before he lost his consciousness. Ron remembered Dr Hisch was the one who formed the autopsies, and there was one victim who said he had not died yet and that obviously Ron's imposter. Also according to what Ron said, to solve this case he needs to knock a few screws loose from his brain to guess the culprit's feeling, which refers to the imposter and Shachi. He inferred that the imposter could be the fanatic of Mylo, or he was the same as Shachi having someone hostage by Mylo.

Saving Toto

Emotional Perception / Anticipation / Intuition / Formulation speed / Short-term strategy + planning / Observation / LTM / Acting skills / Lateral thk / Vertical thk / Resourceful thk

Ron observed that Shachi was so nervous when he decided to shoot the door, this made him feel if he shot the door there would be something bad happen. After asking Shachi, Ron knew that Toto was behind the door. After all that, until Elmer woke up, Ron had not known how to save Toto. But after Elmer risked his life to make the bullet hit the door, Ron formulated the method to save Toto immediately. He knew that Toto was awake by looking at the screen Shachi gave him to see, therefore Toto could literally have certain vision. Also in the video Toto had a little room to move around, so Ron decided to tell Toto to lean over as far as he could and Ron would shoot the other side. By observing any objects that could be suitable in this case, Ron chose the chair. By using the hole of the door and the light, when Ron acted like he was gonna use the chair to attack Shachi, his true aim was to project the upside down

of the chair to Toto's room. The reason that he held the chair upside down was because he needed to induce Toto to think about the shrine gate. He remembered when he first met Toto, his first deduction was that Toto went to the Wakana shrine before meeting with him. Therefore Toto could link to the trees alongside the path, so figure out he needed to lean to the side (but Toto also showed his memory of the details of Ron's deduction and his associative thinking skills).

Suicidal Manipulation / Thinking speed / Resourceful thk / Indirect Manipulation / Individual Manipulation / Emotional understanding / Foresight / Indirect Manipulation / Gaslighting

Mylo revealed that Ron's ability that could make the culprit suicide was a kind of hypnosis that he activated unconsciously. By strongly drawing attention to his eyes, his voice goes right to the culprit's mind, and the powerful suggestion draws out suicidal impulses in the culprit. As what Mylo said, filter Ron's voice could easily prevent this happen.

However, Mylo's sound alteration device was not working at that one moment, making Ron's direct hypnosis controlled Mylo (potentially set by Alice, that at that moment Alice had taken over most of the M family members, this would be a very strong feat for Alice but it's unable to prove this hypothesis is right or not since there has not any explanation on why Mylo's device was not working at that time, but logically it could be controlled by Alice). **(Alice's potential feats: indirect manipulation, setting traps, foresight, influence building)**

With that small gap, Ron controlled Mylo to stab himself and his throat. Mylo formulated a quick strategy to fulfill his own desire and goal (in the further it was revealed that he wanted Ron to be part of M family, to prove that the Moriarty's bloodline is better than the Holmes' bloodline). Therefore, he required Ron to stab him to prove that he would still commit a crime to become one of the Moriarty.

In this situation, Ron processed the only method to solve this case. By not killing Mylo but could make him give up on Ron. He decided to use the knife to stab his vocal cords. This could stop his direct hypnosis to avoid him controlling Mylo to kill himself. The result was, Mylo attempted to suicide by jumping down the sea. Here showed Ron's EU, potentially foresight and manipulation. EU is because he understood would give up as he knew he had lost to Ron, and from the previous experience on Mylo's personality, he would not accept any failure including himself. Foresight and Indirect manipulation may because he could foresee the result of Mylo giving up on him and being confused on his action, but this was not explained in the manga, all of that was just Ron immediately decided to cut his vocal cords and lead out to the consequences.

Ron understood the pride of Mylo would not accept any failure including himself, therefore after Mylo understood he was completely losing to Ron, he would decide to kill himself.

Self management / Psychological quality / AC

Ron showed how strong his self management and psychological quality after this case. He did not believe that he was the killer in the bloody field trip case and proved it successfully in

the cruise case. In labeling theory, there are 5 main stages for someone labeled themselves as 'criminal' or 'deviant'. If someone gets labeled and amplifies crime, they act up to develop a self-fulfilling prophecy, which believes that they are criminals. However, after Ron gets caught after the bloody field trip case and gets disqualified to become a detective, he knew that he could be in touch with other people because he may have a chance to develop the self-fulfilling prophecy by listening to other people. For example when Shachi, Fin or Dr Hirsch, all of them met Ron after the bloody field trip case, saying he was the criminal and please don't get involved in any cases. But Ron's psychological quality is strong enough for him to face those labels and eventually proved that he was not a criminal. That's why he said 'I...didn't kill anyone...', which means that he was finally released from those nervous labels.

The BLUE academy serial murder case <100-114>

In this case it contained 4 crime scenes, Principal Emme, Yudi, Chelsea and Billy Goji (the culprit in this case). Whereas this was a serial murder case, I would split it into 3 parts to explain it, including how Ron deduced it. However, in this case Ron did not show much of his thinking speed skills but more like lateral thinking.

Principal Emme murder case <Chapter 101>

Inductive rsn / Conceptual rsn / Anticipation / Associative thk / Intuition

After discovering the death of the Blue academy principal Emme, and knowing there was an emergency isolation system in this academy for preventing the leaks. When the system is activated, it first cuts off the internet and the phone calls. Ron knew that an emergency isolation system would not just cut off the transmission, but also the physical isolation. Ron anticipated that the bridge would be the same as the isolation system to cut off too. And the reality was, the bridge was up to cut off the way they escaped.

Yudi murder case <Chapter 103> (Wyvern)

Perception rsn / Observation / Sense / Intuition

After Ron discovered the death of Yudi, Ron found out that there was no footprint but only Yudi's in the crime scene, which only found the pages of the 'The Messenger from the sky, chapter 1' behind Yudi's death body, which linked to the wyvern. After that, Ron found out Billy Goji was lost so they went to her room to find her. Ron observed that there were some cigarettes on her table which suspects that there was someone hiding here. After observing the surrounding of the room, Ron inferred the person was under the bed so he avoided Alyssa to throw the boiling water.

Observation / Critical thk / Deductive rsn / Perceptual rsn / Perception

Ron deduced how Billy Goji killed Yudi and Chelsea after he observed several things. In chapter 105, Ron and Toto found out the window was opened on the second floor in Yudi's crime scene. When Ron observed those things he concluded a few points. First, he excluded the culprit carrying Yudi here on the back, and walked backwards in their own footprint. By

observing the depth of Yudi's shoes' footprint, Ron knew if the culprit carried Yudi the footprint might be deeper than normal. Second, based on the blood spatter around Yudi, Ron concluded there is a high chance that she died here. In Chapter 108, after Chelsea got murdered and they went to check the crime scene, Ron discovered there were some marks on the pole. In chapter 110, after Ron gets discovered his real identity by Ayassi they decide to find them to explain. During the running, Ron observed that the position of the small train had changed, but it had already cooled down. Ron also discovered another mark on the pillars and the window also opened. Ron and Night concluded they discovered a total four spots on pillars, five on windows and confined to two floors, both of them deduced how the culprit committed the murder. But after that, Ron found out other evidence to infer how Chelsea died – the cigarette behind the window which could see the bridge.

VSI / WMI / Observation / Deductive rsn / Perceptual rsn / Associative thk / Systems thk / Reflective thk / Decompositional rsn / Divergent thk

In both Yudi and Chelsea murder case, Ron gathered the information of the marks on the pillars and the opening windows concluded that Billy Goji used the school layout. To deduce this, Ron needed to exactly remember the locations of every mark and visualize the whole school to form out a system of how Billy Goji created. First, there were 4 marks on pillars on the second floor, both north and south buildings and in connection hallways. Four marks on the window frame of the connecting hallways facing the courtyard, one on the frame on the north window. By linking those points together, Ron deduced that Billy Goji used a wire around the school to complete his murder. In Yudi's case, the wire was strung from the connecting hallways across the courtyard. Then Billy Goji slackened the wire and lowered Yudi who was unconscious to the center of the courtyard. She then put on Yudi's shoes to create the footprint of Yudi and murdered her, after that she put back Yudi's shoes on Yudi. Then, to infer how Billy Goji escaped the murder scene, Ron reversed all the thinking in this deduction. He clearly remembered Billy was nonchalantly when she arrived at the school. And this made Ron inferred that there was another way to leave the school without the bridge, he inferred that Billy knew there was a secret path. And the secret path was also under the dead body of Yudi, so she could escape freely after murder Yudi.

Chelsea murder case <Chapter 108> (cyclops)

VSI / WMI / Systems thk / Lateral thk / Decompositonal rsn / Deductive rsn / Divergent thk

After Ron observed the train's position was changed and the Chelsea's cigarette, he deduced how Billy Goji used the wire to commit this murder also. After deducting the marks in Yudi's case, there were only four corners of the hallway and one on the window left. By linking the train had moved, the marks on the rooftop pole and the fallen body bag, Ron formed a murder system in his brain. The system was the model train connected to the filled body bag with a wire and the model train's power being used to lift the body up onto the roof, and the wire also wrapped around the hall multiple times to make this possible. This requires Ron impressing VSI to link all the things together in the whole school to run out a system.

For how Chelsea fell to die, the roof was not enough for her damage to make her die. Therefore Ron linked with the location that she discovered Chelsea's cigarette to infer that

she was shocked when she saw something. The ‘something’ was the down of the bridge. This was not expected by Chelsea so it made her surprised to drop her cigarette. While she wanted to go to the bridge to investigate it, she was ambushed by Billy Goji and rendered unconscious. After that, Billy Goji hung Chelsea from the top of the bridge as it was rising. When the bridge was standing upright, Chelsea fell from the top of the bridge, and after that Billy Goji moved her body to the roof to make everyone discover it.

Billy Goji ‘murder’ case <Chapter 107> (Merman)

Systems thk / Decompositional rsn / Associative thk / Deductive rsn / Memory / Observation / VCI / Intuition

We all know Billy Goji was the culprit in this serial case, so the Merman case might be fake as well. Ron first found out that broken hinges. He said that if you removed the stopper which supports the second hinge and the lid, Billy Goji would be able to use the chain as a pivot the door upwards and create a big gap for her to go in and leave, whether it was a chain or not. Also, Ron did find the hair in the locker, which he remembered Billy Goji said she was gonna take to the pomeranian today.

After all the deduction they found out that Night was lost and they guessed he was going to find Billy Goji by himself as he also deduced there was a secret path. But after substituting into Billy’s thought, he knew she would look on the BLUE’s stele and Ron inferred the aim of why Billy Goji committed those murders. Ron knew the cases were difficult to solve, Billy Goji also knew this. Therefore she decided to give out some hints, the first 3 chapters of the book "the messenger from the sky”, which Ron knew her aim was trying to plug the outstanding young buds in the Blue academy.

After hearing what Billy Goji said to them, Ron sensed something weird there. He felt like that was not the end of the case, or should say was not the end of Billy Goji. Ron sensed that Billy Goji might be hiding something that they did not know. In reality, Ron’s intuition was correct. The real identity of Billy Goji was the sister of Winter and Mylo – Alice Moriarty. She imprisoned Mylo after saving him from the sea. She had also killed everyone of the M family except Mylo and Winter. On the other hand, she was also the one who sent the videos to the world detective alliance.

(I will skip the cases that do not involve the main plot as most of them are not that complicated to solve if compared to bloody field trips, cruise murder and blue academy murders.)

The Kamakura trip murder case skipped is simplistic as Kawasemi was able to solve it but…

Ron showed a **musical intelligence and LTM** after the case when he met his kouhai Kei Moore Kikuma. He had already recognized Kei when he was solving the case. The important thing is, Ron recognized Kei through only his sound, and he had not even seen his face before (Kei wore a mask when he met Ron in Blue). This short meeting in blue academy was not worth remembering to humans so basically ordinary people would not transfer it as LTM.

But this showed Ron could recall any stuff he wanted or showed his memory storage is large than normal people.

Current arc: vs Alice Moriarty (chapter 125)

(I will start putting Alice's feat as well)

M family current members

-Alice Moriarty (current leader of M)
-Mylo/Milo Moriarty (getting house arrest by Alice)
-Winter Moriarty (left M and work with Spitz in the Blue academy case, currently solved the bomb on Tiger's neck and collected him)
-Tiger Dan (assistant and uncle of Alice, lost to Ron in the Aquarium plot)

From **chapter 124**, Ron realized that Alice Moriarty started her move by sensing that Night Bran Jr. 's missing was odd (Night did say to his classmate 'Alice' this name several times), Ron confirmed that his lost might associate with Alice. And also linked with several branch directors of the World Detective Alliance getting killed consecutively. Ron decided to notice his kouhai Kei Moore as he knew he's also one of the World Detective Alliances. Ron's **decision making** considered the fact that Alice was constantly murdering the member in WDA, and now Ron sort of started focusing on the Asia region, which Kei Moore was in Japan right now. Sure enough, Kei received a message about 'hide and seek' from Tiger Moriarty.

Alice showed her **threat and manipulation** feats **chapter 126**. She literally put a micro bomb inside her uncle Tiger M's neck to control her action and made him obey her order. That showed the difference between Mylo and Alice. Mylo was more kind in contrast with Alice as he would not even hurt his family member but Alice does. She hid her plan from everyone, even her assistant and just used them as a tool to complete her plan, more manipulative than Mylo.

(128-129) In the conversation with Tiger Dan after they witnessed the disappearance of Kei Moore, Ron found out that they could not let Tiger know their plan or deduction. From the conversation, Ron knew that Tiger did not know the location of Kei as well. To complete this deduction, Ron needed to really understand Alice's personality **(EQU)**. He found out how madness and childishness of Alice was, via the Blue academy case and how she killed the member in WDA. Therefore, Ron described this as a 'hide and seek game' for Alice Moriarty, and the one who hid was Kei, the one who found was Tiger, whereas Alice was the creator of the game. Ron understood that there was no reason for Tiger to meet him, unless he was seeking help, so Ron confirmed that Tiger was trying to use Ron's deduction to find out the location of Kei and kill him, and that's why Ron kept telling Toto and Kiku to be silent **(decision making)**.

After all that, Ron gathered all of them to go in the gondola as this was the only place they could do the conversation safely in the park. He knew that if Kei was the one who hid, then he must have done a trick on all of them and hid it on purpose. Ron recalled the appearances and the witness testimony and deduced that Kei did a vanishing trick on them **(thinking speed, deduction, memory)**. Ron knew that in reality, the gondola they were in after the disappearance of Kei was not where he was. He recalled that at that moment, their position could not see clearly of Kei's gondola, due to the optical illusion. He understood that Kei waited for the gondola in a perfect position and then filled the interior with smoke. Ron realized that the environment of the ferris wheel is surrounded by some trees, since the angle was too sharp when viewed from below, and the steel beams get in the way, so it's very hard to follow a gondola with your eyes when it rises up. Once Kei had gotten that high up, he used a remote-control device to activate the smoke bomb in the gondola ahead of the one he was in. Ron knew this by discovering the cotton in the gondola, he then found out that those cotton were Kei used for misdirecting them to pretend it's as smoke. The timing of Kei putting the smoke bomb in the gondola ahead of him might be before the incident as according to the witness testimony Kei rode the ferris wheel before the incident.

Although Ron knew that Kei might want them to be involved in this hide and seek, they must need to find Kei to confirm he was safe before Tiger found Kei.

(130-131) Alice is confirmed to have murdered all the detectives of the special groups, due to putting all their licenses before she escaped. She predicted that the special team would discover her position / she left some evidence to induce the special team to discover her position **(setting trap)**. By using this to force the special team to quit being detectives **(indirect manipulation)**, limited the action for the World Detective Alliance.

Ron first zooms out the place that Kei hid to the Park area (within a kilometer), and inferred that kei purposely hid somewhere with people around due to the branch directors having been killed in places like forests, rocky areas **(Inductive)**. Ron excluded the possibility of Kei disguised the other guests as he did not have the skills with disguise like Winter, and it would be high risk if he was up against Tiger for a long time.

While in the ferris wheel, Ron had already found 93 potential hiding spots (**Observation**) of the whole park (that's a theme park so it's pretty big) (**VSI** - visualized the whole park and analyzed it to find out all the potential spots - **analytical skills and thinking**). With what Toto said about Kei's mask when he first met Ron, Ron deduced the best place that Kei would hide in a park by using his personality and experience (**critical thinking**). He remembered Kei hated herbs, so he excluded that his hiding place was in the herb garden. Based on Kei's personality,

Ron sensed he would make another bold challenge, like how he hid in the ferris wheel. Also associated with Kei aims to be among the public, Ron figured out he would be wearing a mask. Link to all the points, Ron deduced Kei was scrubbing the aquarium the whole time (**associative thinking and deduction**)

After confirming Kei's position, Ron set up a strategy quickly to avoid Tiger finding Kei first (**short-term strategy, formulation speed, strategy foresight, leadership**). Ron anticipated Tiger had communicated with some staff here (**anticipation**), and this could explain why Kiku-san was not following them. All we know is Kiku was the one who brought Kei to the scene when Ron started his deduction (the herb garden), while Kiku was the one who discovered Kei (proved that it was arranged by Ron). So now, who was the 'police officer' that talked with the staff about where Kei hid? The answer is obvious - Kiku / his subordinates (saying the wrong position of where Kei was hiding - **misdirection**)

(132) As Tiger Dan said, the tank in the aquarium where Kei was hiding, was Tiger's first initial guess. As he said "that sort of instinct has always served me in life-or-death situations". But what Ron did was, anticipated that Tiger had an extraordinary intuition and misdirected him and left the aquarium. This aquarium feat showed much of Ron's **anticipation, inductive, misdirection, formulation speed and multiple strategy feats, which also provided other Resourceful thinking feats**.

After arranging what Kiku should do, Ron and Toto decided to go to the herb garden (that's the place where Ron was trying to induce Tiger to go). He then arranged for Kiku to disguise one of his subordinates as the Mascot to arrest Tiger (**setting traps**).
In this case, Ron knew two stuffs:
-this game was Alice's order (he anticipated actually as he suspected Alice used some method to control Tiger)
-Milo has not died yet, but was trampled by Alice.

After all and Ron knew about his current situation, he reminded everyone that it was an emergent situation now as he understood the failure from Tiger Dan would be execute by the M family, due to what he understood from Mylo that "the Moriarty have no mercy for those who fail" (**EQU**).

However, Tiger has not died yet. Instead, he was collected from Winter. She removed the explosive device in Tiger's neck and told him she was hunting Winter.
Meanwhile, Alice found out that Tiger had not died yet since the bomb did not explode, which she deduced someone directly rewrote the code of the bomb and deactivated since there was no any radio interference, she now inferred that Winter was the one who solved the code. (**Deduction, Logical thinking, info control**)
And this showed why Mylo would lose against Alice.

(135) Ron Kamonohashi got notified by Kei Moore that the World Detective Alliance was going to capture him, since he was getting suspected to be involved with Alice Moriarty. But in chapter 135, Ron is alone to take down two professional fighters from the WDA (**fight skills**).

(When Ron solving the coming serial murder case, he was the under the effect of sleeping pill, and there are few scenes showed Ron fell asleep while he was hearing the evidence conclusion by Toto but Ron could still make multiple of deductions in this condition, and the effect of sleeping pill could make an elephant sleep immediately – mental fortitude)

All the detectives in BLUE will have to take part in a special training, which includes Spitz. This means that Ron could not gain support like before in the Cruise Case arranging Spitz to support him, and it also means Ron is going to fight alone with the WDA organization while finding the way to catch Alice Moriarty (**Adversity**). By the way, Ron actually sensed the BLUE's action (**Anticipation**).
(136-137) In these chapters, Ron solved a murder case while he wasn't in the murder scene, and he solved it by only listening to Toto's scene distribution. By showing this kind of working efficiency, Ron has the potential skill to solve multiple cases at the same time.

Ron easily inferred that the umbrella wasn't used for rain, since the rain had stopped this morning, and the umbrella was worn-down. Ron deduced that the victim was using the umbrella to tap the ground, and concluded that the victim was visually impaired (**Linear thinking, Deductive reasoning**).

He also inferred that he was using his smartphone to know what was in front of him (a voice guide app), plus the bone conduction speaker.

Ron also made multiple hypotheses in this case (**Divergent thinking**). Such as he set up a hypothesis that the victim was kneeled on the ground (knew from the wet from the rain), which means the victim was finding something in a low place. And linking back to the murder that happened in a promenade, Ron imagined how's the promenade would look like and concluded that the victim was finding stuff under the bench (**Associative thinking**).

And now, it's easy to find out how the victim was poisoned — there was an object with a poison needle under the bench. With this conclusion, and the description from Toto, Ron knew that they didn't find any object stuck under the bench, but he found out who was the culprit successfully, by only listening to the fallen mic which recorded the footsteps sound. He found a suspicious person when he heard there was one person that wasn't wearing the same shoe cover as Toto's searching team (**CPI, Intuition, Musical Intelligence**).

Confirming the culprit of this case was one of the forensic agents, Ron knew he was probably hired by Alice to succeed this murder and painted the crest on the ground, and associating to the murders before, Ron ensured that the game planned from Alice isn't over yet. And the fact is, Alice is trying to push them into an endless murder loop (culprit would have been killed to become the next victim for the next case).

(Chapter 138-145) - With the support from those BLUE academy students in 139, there was a traitor that was controlled by Alice – Knight Bran Jr., he was not fully controlled by Alice, but Alice used his pride and ambition to manipulate him. Knight was caught by Ron in 144, so to have this premise, the coming explanation will explain when Ron started to suspect and found out Knight's betrayal.

In the 2nd murder, the victim said "Chimera" before his death, and according to testimony, the witness saw a picture that was held by the victim and it was like a horror monster drawn by writing brush, more likely an eastern style. Ron discovered the pattern of murder due to the features of Chimera, an animal mixture in Greek mythology. Ron linked the features of Chimera and the eastern style picture from the victim inferred that picture was the Nue (鵺) in Japan, it is a monster that also made from multiple of animals. **(Associative thk, Abductive)**

Knight then 'discovered' a new evidence – the picture of the Nue but left the right hand side, Ron used the previous pattern to know that the next murder location might be "Toranomon" (Tiger) and "Mamianacho" (Tanuki).

Chapter 142, Knight 'committed' the murder on the third victim in "Mamianacho". While Knight and Toto were checking the corpse, Toto discovered Knight was wearing the gloves but he did not aim to touch the victim, and this was caught by Ron by hearing Toto's breathing pattern stopped in a moment **(Musical intelligence, intuition)**. At this point, after hearing what Toto said, Ron started suspecting Knight because of his action and asked Knight his own deduction on this murder **(Guesswork)**. They discovered a can of coca cola behind the murder scene, but it did not have any poison inside (using the test method).

After discovering the symbol behind the third murder, and the accident on Toto accidentally fell over Knight's body, Ron heard Knight's reaction and confirmed he was the 'murderer'. After that, Ron said he would explain the murder in Mamianacho to other BLUE students, but he also told them about what he suspected Knight did, so he arranged for them to focus more on Knight, and told them Knight knew where the fourth victim would be so just follow him.

Ron then heard what Toto said and triggered his thinking and realized this was a trap from Alice to Knight, he realized that Knight was getting deceived by Alice so hard.

Ron then set up a strategy to induce Knight in the forth murder. As he had a conversation with the other 3 BLUE students already, he had arranged for them to follow Knight's direction to catch the victim earlier. But at this moment, the people from the WDA started climbing in Ron's location, although Mash had interrupted their radio to make them leave, Ron still act he was getting in trouble to cut off the contact link with those students and Toto, his aim of this was to make everyone have a chance to chase the victim separately, including Knight **(STP, Formulation speed, Acting skills, Misdirection, Setting traps)**.

Ron deduced that Knight was arranged by Alice to poison those victims, but he also understood Knight would not be able to kill them. However, Ron knew that Alice also knew about this fact, so he inferred that if Knight did not poison the victim but the victim still died, then the only explanation was – Knight was having the Antidote, those victims had poisoned before. Ron understood how cunning Alice was to guilt tripping Knight – as if Knight did 'poison' the victim, means he accepted to kill someone, but if Knight did not, means he indirectly killed those victims. It also means that from the start when Knight met with Alice, he had no choice.

Ron also understood that except the first murder, every victim after that was trying to find the antidote. He knew that Alice was trying to misdirect them to think the victim had been forced to digest the slow-acting poison. The first killer (the victim in the second murder) was told to find the antidote in the first murder scene but he was unable to find that and died, and that's why his fingers may have some dirt as he was digging the ground to seek for the antidote. Same with the 2nd murder, the victim in the third murder was also seeking for the antidote, but she thought the coke was the antidote so she drunk it and there's nothing happen except her death, Knight was not able to digest her as he thought it was the poison inside the needle but it actually the antidote. Therefore Knight indirectly killed the third victim. Ron then sensed that the fourth victim may also have the picture of the half Nue. Ron figured out this was a hint from Alice for the victim for getting the antidote, and in Kanji of Nue (鵺) could be divided into two things, 夜 and 鳥, and there was only the left hand side of the picture means that the hint was 夜, and this kanji means "night" in english and this was representing the victim should find a person call "night", aka in this case Knight Bran Jr was the one who fit this. **(Deductive, Decompostional rsn, Logical thk, Analogical thk, trap evasion, EQU)**

(Feats for Alice: Verbal deception, misdirection, direct / indirect manipulation, concealment, setting traps, s-l planning, EQU)

Final Showdown with Alice (Ch. 148)
