"After Yokoya's trap was explained, he starts to overwhelm and psychologically question Akiyama's motivation and goal, pointing out the contradiction. 'If you're insistent on stopping the LG offices, then you should never have allowed me to make any money'. Yokoya's relentless taunts are cleverly crafted words of sophistry, further showing his adaptability as he directed this sophistry to dismantle Akiyama's motivation of justice, reasoning the picture that Akiyama had actually betrayed them and helped the LGT organisation."
&
"Yokoya's sophistry, muddled with the truth, really rattled down Akiyama. Nao tries to comfort Akiyama, stating that 'Yokoya put together a makeshift plan that no-one could have possibly noticed to increase his winnings'. Yokoya's final tactic to increase his money was suspected by Akiyama, but due to the development of the game, Yokoya knew that Akiyama literally couldn't do anything because of how risky it would be, shielding this tactic completely. Yokoya perceived Akiyama's thought process here, hence why he transferred money to his account. 'I feared the possibility that one mistake could ruin our entire plan. And had I gone out there to prevent his account from growing, I'd risk losing part of our winning share'. Demonstrating how invincible Yokoya's final strategy was. Akiyama further explains how 'If you consider the basis of my motivations, I'm hardly any different from Yokoya! Yokoya knew that! He saw through that! And that's why he was mocking me!' Note the exclamation marks, reinforcing Akiyam's distress."

Foresight - Y
Yokoya foresaw the entire sequence, from the moment he identified Kikuzawa during the pregame team face-off, immediately after the rules of Contraband were explained, all the way through Forced Rotation's execution and the subsequent implementation of his real smuggling strategy.

Contraband Strategy >>

Planning - Y(>=)
Yokoya's planning extends far beyond Contraband itself. His overarching scheme can be traced all the way back to his initial preparations upon learning about the LGT, eventually taking shape through his replacement of a participant in an alternate Downsizing round, which he exploited to establish the foundations for his dictatorship, an authority he would subsequently consolidate and maintain during Contraband through his loyalty-point system and surveillance mechanism. These preparations provided the organizational and psychological framework for his Contraband strategy, which involved an insanely sophisticated sequence of meticulously planned events, extending through the execution of Forced Rotation and culminating in the successful implementation of his real smuggling strategy, a strategy he had planned from the very beginning.
