Yokoya Norihiko's Sensory Feat

Doc made by Enii, heavy dubs to Caque for measuring the panels and being a good femboy

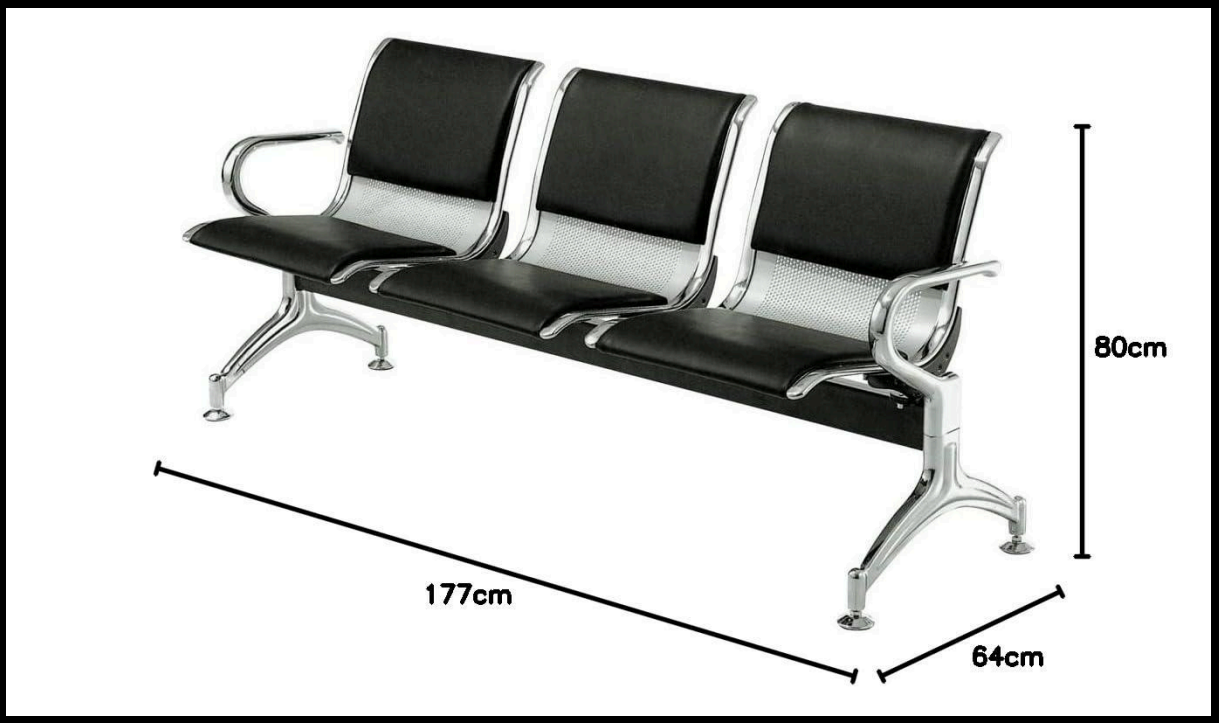

I have noticed that people usually overlook this feat Yokoya performed in contraband, so I'll prove that it's actually impressive, especially in sensory.

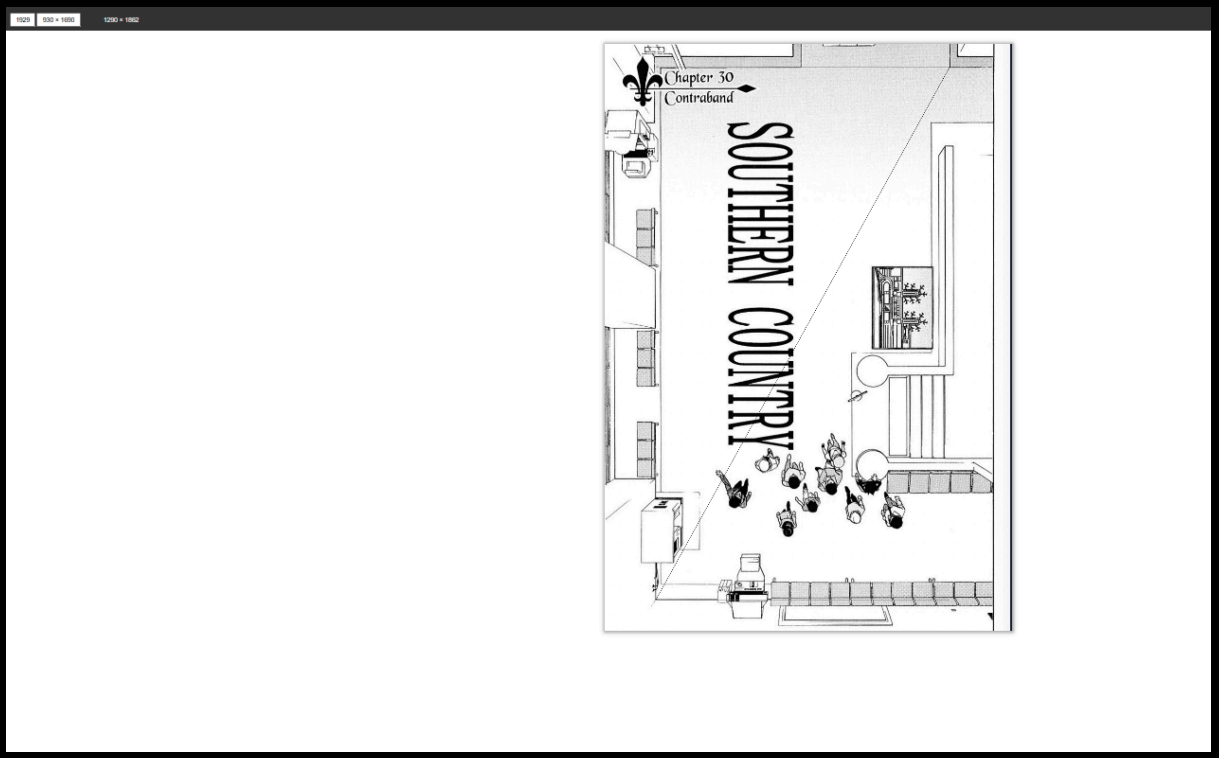

We all know Yokoya EP'ed Akiyama from the northern side, while Akiyama was in the southern side. We can calculate the distance using pixel scaling.

Three airport seats are 170 pixels long here.

Three airport seats are 177 cm long.

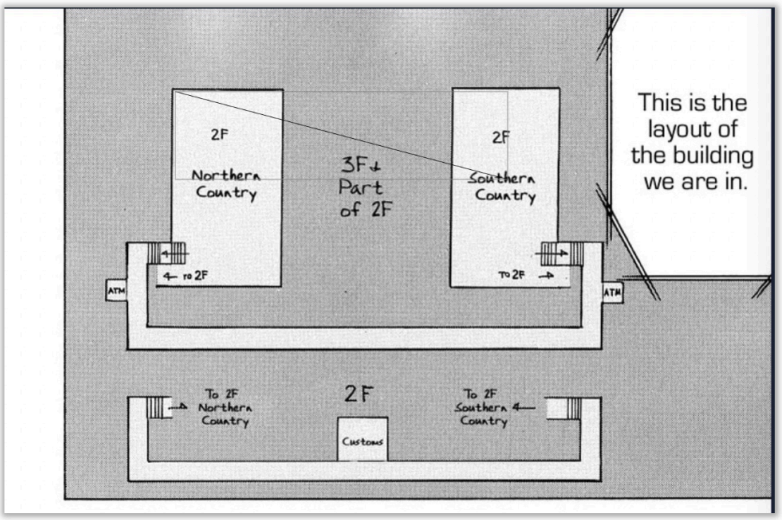

We know a single room is 1690 pixels long. Therefore;
170 px = 177 cm
1690 px = 1759,58 cm or 17,6 meters

We know that Akiyama and Yokoya were in the middle room and at the back seat, respectively.

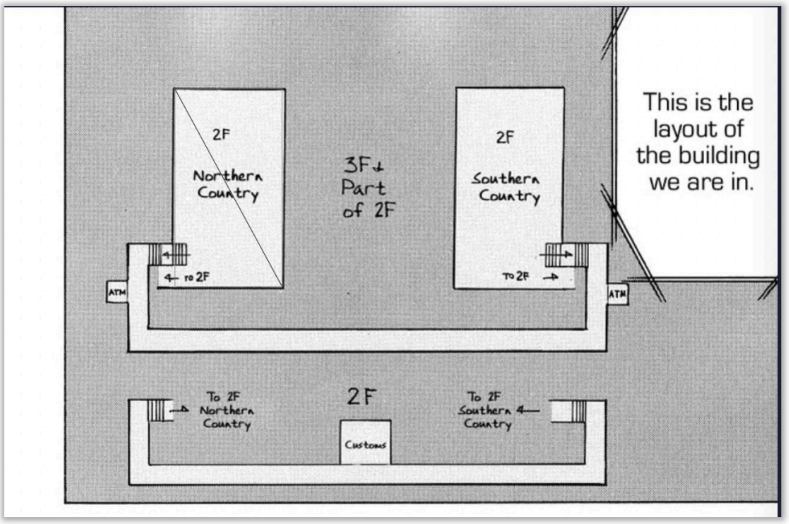

In other words, the two of us
will take on a debt of 400 million yen each, and continue on into the next Revival Round!!

but the very
LGT office
itself!!

575 | 556 × 147 | 1289 × 847

373 | 178 × 328 | 1289 × 847

From this plant, we know that each room is 328 pixels long and the distance from Yokoya to Akiyama was roughly 556 pixels long. Therefore;
328 px = 17,6 meters
556 px = 29,83 meters

From that, we can conclude that Yokoya EP'ed Akiyama from a distance of ~30±1 meters or 98.4±3.3 feet.
