Tales and Articles

Dr Clef's Personnel File

Clef is a scientist for the SCP Foundation (Yes, that in itself is a feat)
Intelligence: Academics, Crystallized Intellect, Knowledge
SQ: Influence

He claims his real name is an A major chord played on a ukulele, and signs his reports with an alto clef (hence his name)
Intelligence: Musical Intellect
Deception: Verbal Deception

He has three eyes, whose pupils absorb all the light that falls on them.
Observation

He published an article called "On the use of Human Semen to [redacted]," in which he described an anomaly in detail, probably to get the attention of the SCP Foundation and later join it.
Manipulation: Indirect Manipulation
Others: Creativity, Knowledge, Descriptive Analysis.

He used to be the GOC's Ukelele agent.
Crystallized Intellect: Experience
SQ: Influence Bulding

He convinced the foundation's investigative agent to let him join, since it's unknown how he did it. I'll just list all the categories this feat could have included.
Manipulation: Charisma, Persuasion, Convincing, Blackmail, Seduction (We can't rule anything out), Emotional Manipulation, Logical Manipulation, Intimidation

Murder Mystery

Clef speaks with Darrow (the narrator). There, he mentions a previous incident with flying lava spores. He then said it was a hyperbole (exaggeration) when Darrow asked him if it happened. Well, it was a lie, though Darrow discerned the lie.
Deception: Verbal Deception, Bluffing

He boasts of being able to kill someone in a closed room by explosive decompression. He also said that's what he normally does when committing closed-room murder. Since he's Clef, I wouldn't be surprised if it were true.
Crystallized Intellect: Experience
Others: Creativity

Clef reads Darrow perfectly, deducing that he felt he was being kept busy.

EQ: Emotional Understanding, Emotional Perception
Others: Cold Reading

Reality Benders and You: How to Survive When Existence Doesn't

Clef, due to his experience, was selected to conduct seminars.
Crystallized Intellect: Experience

While preparing for the seminar on reality warpers, he decided to let the audience experience what it was like to face a reality bender, so he created an experimental drug that made them susceptible to suggestion, put it in their food, then set up some special effects tricks in the room, he then leaves bags under the tables to vomit and informs the counseling staff while giving them a counteragent to inject into the vents (It should be noted that Clef is aware that O5 doesn't usually approve of such things)
Crystallized Intellect: Chemical Knowledge, Knowledge Application
Planning: Preparation Process, Contingencies
Others: Decision Making

The seminar began. Clef couldn't be sure that people would eat, so he decided to make them take it as lightly as possible. That's why he told them he didn't agree with the O5's policy of not carrying weapons into blue zones (which is probably true). Then he bored them with the many nicknames for reality benders. Once he was sure everyone had eaten, he got their attention by saying he would tell them the secret to dealing with reality benders (I'd count speaking in front of a group as a Stress Management feat, but this is nothing to Clef)
SQ: Social Awareness, Communication Skills
Manipulation: Group Manipulation

Then the moment arrives, Clef tells them to look at the walls, then they see that both doors and windows have disappeared, that's when Clef pretends to be a reality bender, making them feel inferior to a reality bender, and

projecting the image of being superior, while directing their thoughts so that they believe that the desks have come to life, suggesting them and causing them the stress of facing a reality bender, which works because of the aforementioned experimental drugs.
EQ: Emotional Understanding
Manipulation: Emotional Inducement, Gaslighting, Mind Control, Group Manipulation, Demoralization, intimidation
Deception: Misdirection, Acting Skill, Verbal Deception

Clef notices that one of them has a 9mm pistol and proceeds to demoralize and intimidate him.
Observation
Manipulation: Demoralization, intimidation

After that, he calms them down and explains the truth.
SQ: Conflict Resolution, Communication Skills

Clef did all this to make them aware of how dangerous it can be to confront someone who alters reality and to convince them that the best course of action is to strike quickly (something he has done throughout his career)
Manipulation: Group Manipulation
Methods

Routine Psychological Evaluations By Dr Glass

Glass was psychologically evaluating the foundation staff (yeah, there's no way that's going to go well) when he got to Clef, Clef intentionally said disturbing things like wanting to kill the foundation staff, then pretended he hadn't said them so he could tell Glass he was having auditory hallucinations and needed to rest, trying to get rid of him, of course, it didn't work.
Deception: Verbal Deception, Bluffing
Manipulation: Gaslighting

Clef And Dimitri Hit The Road

Glass sends Clef and Strelnikov on vacation. In an airport bar, the waiter looked Clef in the eye. Clef immediately knew he was going to ask what he would like to order, and replied “Bombay Sapphire Martini, stirred, not shaken, two ice cubes only, 6:1 gin and vermouth, two olives, one onion, and if you bruise the vermouth god help you”
EQ: Emotional Perception, Emotional Understanding
Crystallized Intellect: Knowledge

Clef and Dimitri argued at the bar about drinks, and somehow, they ended up talking about events from their past. Clef recounted things like… murdering people with a chainsaw after mistaking a costume party for a Class D mutiny (yes, this is an anti-feat of Decision Making and Divergent Thinking since Clef didn't even consider that it could be a costume party) Anyway, since they shared past experiences and also some methods of murder (yes).
Crystallized Intellect: Experience
Methods

There was a battle on the plane due to an attempted hijacking. As expected, Clef and Dimitri easily won. Furthermore, during the battle, Clef skillfully grabbed a grenade from someone who had just been shot down, in other words, he practically snatched it out of someone's hand, he also avoided getting blood on himself during the fight.
FSIQ: Battle IQ, PSI

After the battle, Clef reasoned that he and Dimitri would be recognized as heroes for it
Premise 1: Stopping a terrorist attack is heroic.
Premise 2: Heroes are recognized.
Premise 3: Clef and Dimitri stopped a terrorist attack.
Conclusion: Clef and Dimitri will be recognized, which would be inconvenient for members of the foundation, so he devised a plan: seduce

Lucy (the flight attendant) who had already been annoyed with him and leave her unconscious in a place out of sight of people, taking advantage of that to take the key to the luggage compartment, retrieve the suitcases and head to the lowest part of the plane in order to escape from there before the other passengers, the plan was executed perfectly and they escaped from the plane.
Reasoning: Deductive Reasoning
Planning: Short Term Planning, Formulation Speed
Manipulation: Seduction
Others: Decision Making

Clef and Dimitri had another battle to steal a truck, obviously they won, Clef drove the truck.
FSIQ: Battle IQ
Crystallized Intellect: Knowledge Application

Clef and Dimitri had car trouble, so a group of girls gave them a ride. Clef spent the whole way whispering witty compliments in one of their ears.
Others: Creativity

After that, they were captured by the GOC, who believed Clef and Dimitri were on an undercover operation. The colonel showed them Agent Yoric, and Clef claimed not to know him.
Deception: Verbal Deception

At the end of this story, it is revealed that they were telling the story to Glass. They detail how they disguised themselves as wealthy corporate executives on vacation to evade the COG (whose seaplane was stolen). Glass thinks it's a lie until they show him multiple pieces of evidence. The move seemed rehearsed, and the article said that it most likely was. In that case, they predicted that Glass wouldn't believe them and they should show him evidence. Furthermore, they also gathered the evidence at that time.
EQ: Emotional Understanding
Deception: Identity Deception, Acting Skill, Misdirection

Foreshight: Prediction
Others: Info Gathering

Excerpts From "How To Survive When Reality Doesn't", by Alto Clef

This article is literally Clef rambling, and believe it or not, it has some feats, furthermore, the article itself is a Holistic, Non-Linear Thinking and Divergent Thinking Feat

To begin with, he declares himself to be old; specifically, he declares himself to be older than Adam Savage (from MythBusters). Adam is 58 years old, therefore, Clef is over 58 years old, furthermore, he admits that he likes to ramble.
Crystallized Intellect: Experience
SQ: Self-awareness

He states that when dealing with SCPs from biblical times, they should be treated as equivalent to plants and fungi, since taxonomy was not as developed at that time; furthermore, he knows that The Catholic Church even officially declared that beavers were fish in the 17th century so that you could eat them during Lent and that Aristotle divided the world solely into animals and plants.
Thinking: Divergent Thinking
Crystallized Intellect: Knowledge

In the midst of his ramblings, he asks himself the following question (referring to Kondraki): Yes, he really rode 682. Yes, he really got a water bottle stuck on his dick. The question remains: can he ride 682 with a water bottle on his dick?
Others: Creativity

Since he didn't know the number of SCPs in containment, he estimated a few tens of thousands at most and a few hundred at least. Currently, over

9,000 SCPs have been documented (though there were fewer at that time), so his estimate was accurate.
Others: Intuition

Clef says that memetic agents aren't real and challenges the reader (twice over) to prove it by seeing one. Now, let's consider that Clef is a lying bastard with no regard for human life, and it becomes obvious that this is a lie and that the double challenge was to make the reader question whether it could be real or not.
Deception: Verbal Deception, Bluffing

At one point he starts rambling about the 001s and which ones are real, saying that his proposal can't be because everything he says is a lie, including that; Bright's and Gears' must be real because he's seen them, but that could also be a lie.
Deception: Verbal Deception, Bluffing

He mentions that his practice of drugging the audience members at his seminars may have driven someone to suicide.
Manipulation: Emotional Inducement

His hatred of the metric system is so intense that he writes everything in imperial units, even if it costs lives.
EQ: Emotional Engagement

It suggests using the lunar champion against the killer robot in Jupiter's Great Red Spot.
Thinking: Divergent Thinking

In her suggestion for Draven and Talloran's wedding cake, he mentions knowledge of neutron stars.
Crystallized Intellect: Knowledge

He suggests that SCP speed dating is beneficial to their psychological well-being.

EQ: Emotional Understanding

Before saying aloha, he quotes Charles Dickens.
Crystallized Intellect: Knowledge

He claims to have foreseen the failure of Project Orpheus (a project to weaponize reality manipulators) because reality manipulators are essentially unstoppable, and the only way to deal with one (according to Clef) is to buy enough time to shoot them and then shoot them.
Methods
Foreshight: Prediction

Termination Procedure: SCP-809

Clef determines that SCP-809 is becoming a problem and must be destroyed, so he seeks advice from other researchers.
SQ: Resource Management
Others: Constructivity, Caution, Contrasting

One of the researchers suggests using electromagnets, so Clef places an electromagnet ready to activate and then on the other side places a metal fist in position to crush 809. To keep 809 in place, he decides to use the psychological evaluation room. This idea occurred to him during the chat with the other scientists. He then asks someone to participate and pretend that they are going to do the evaluations. He makes them get rid of all their metal objects, and the plan begins. 809 realizes that the scenario is prepared to assassinate him, but it doesn't help him much.
Thinking: Critical, Analytical, Convergent
Strategy: Strategy Success Rate
actics: Setting Traps
Planning: Short Term, Formulation Speed, Preparation Process
Deception: Fabrication
Others: Constructivity

SCP-001 - The Way It Ends

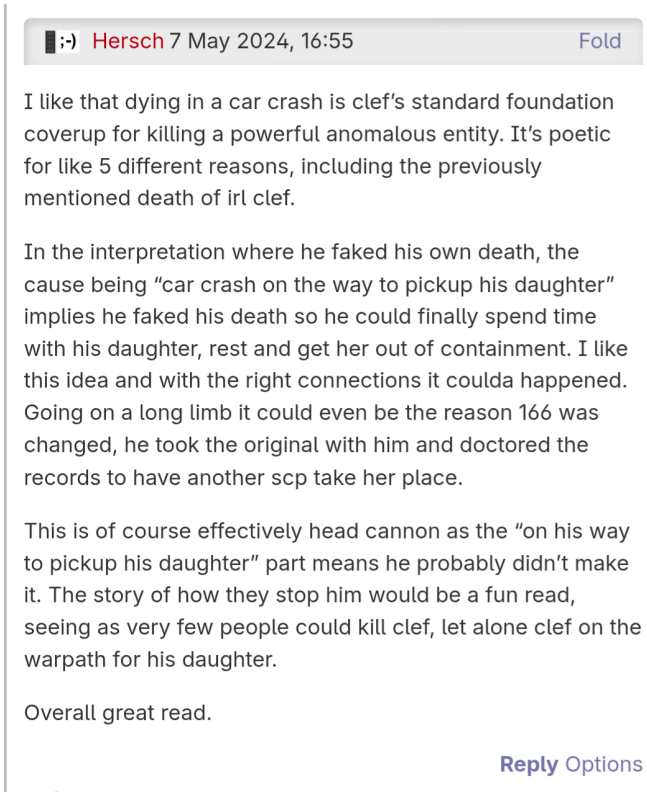

Dr. Clef kept a secret diary containing the identities of eleven of the thirteen members of the O5 council. It appears the diary entries stem from rumors he heard at the Foundation and some archival research.
EQ: Psychological Profiling
Others: Information Gathering

SCP-5000 - Why?

Clef now claims to know what it feels like to experience a memetic agent, and knows how to distinguish it from the experience he felt when he freed himself from “it” (yes, they rewrote this part with Shaw, now this feat belongs to Clef).
Crystallized Intellect: Experience
Others: Pattern Recognition

The Tombstone of Alto Clef

As many of you know, SCP has multiple interpretations, which is why it's difficult to establish whether or not it's a feat, and even more so with Dr. Clef, who bluffs even his readers. For this particular story, we'll take the interpretation that Clef didn't die, but rather faked his death (which is less likely, but you never know with Clef) specifically, we will use this interpretation:

Hersch 7 May 2024, 16:55 Fold

I like that dying in a car crash is clef's standard foundation coverup for killing a powerful anomalous entity. It's poetic for like 5 different reasons, including the previously mentioned death of irl clef.

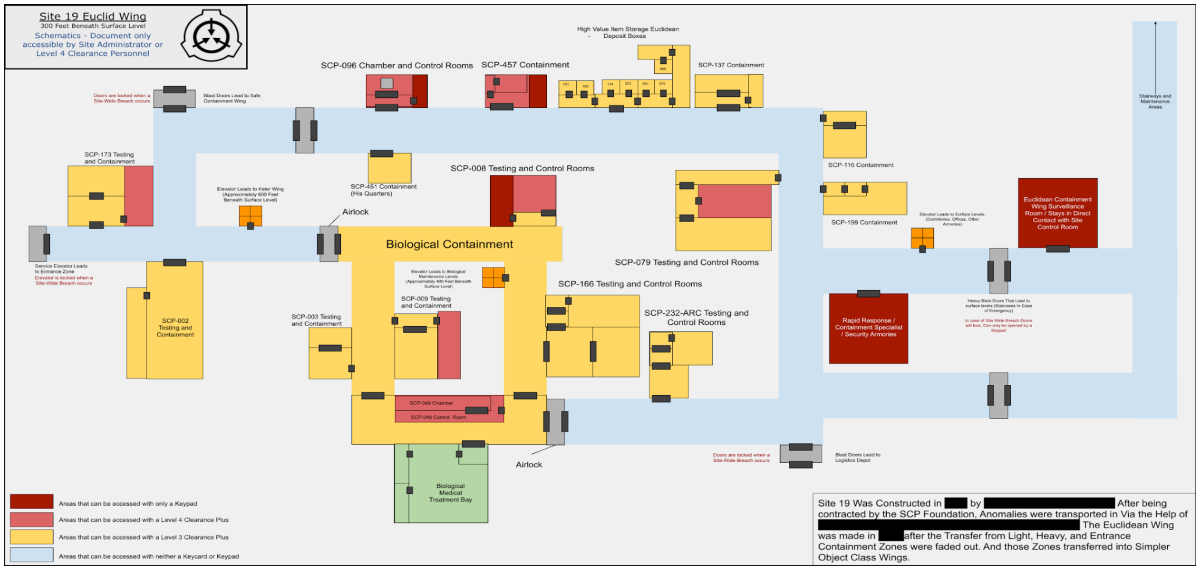

In the interpretation where he faked his own death, the cause being "car crash on the way to pickup his daughter" implies he faked his death so he could finally spend time with his daughter, rest and get her out of containment. I like this idea and with the right connections it coulda happened. Going on a long limb it could even be the reason 166 was changed, he took the original with him and doctored the records to have another scp take her place.

This is of course effectively head cannon as the "on his way to pickup his daughter" part means he probably didn't make it. The story of how they stop him would be a fun read, seeing as very few people could kill clef, let alone clef on the warpath for his daughter.

Overall great read.

Reply Options

Now, okay, so after killing a reality warper, Clef spoke with ~~Bright~~ for the last time since he missed his son's wedding and after that he told him he had to go to a meeting, the meeting he went to, there he spoke with Sophia Light, who refused to give up on Clef, that's when Clef made the decision to fake his death, I want to emphasize that this is only an interpretation, and that nothing I'm about to say is said in the article, but from here Clef would begin his plan, for this he would go to rescue his daughter (SCP-166 in case you're not into the lore) SCP-166 is contained in Site-19, I found this map of Site-19 to make it easier for me to visualize:

Now, since this site contains SCP-096 (A monster that kills you if you see it) I will assume that there are no cameras, if it is believed that Clef died it implies that it was a violent entry in which multiple guards attacked him (it is impossible for a single guard to defeat him) since to get to SCP-166's cell you have to turn around, Clef would have identified a guard physically similar to him and. He would have killed him right there, then dressed him as himself in record time, then in that same time he would have dressed himself as that guard, and made 166 go the other way, thus faking his death and sneaking her out by hiding her through the corridors of the next level before leaving the site, then, so that no one would notice this, Clef would have needed a contact who would pass the body off as Clef (since the prints would match) and write a false report about a transfer of SCP-166, thus faking his death perfectly (I want to emphasize again that this is the least likely interpretation)

Deception: Identity Deception, Practical Deception, Misdirection, Fabrication, Falsification, Acting Skill

Observation

FSIQ: PSI, VSI

Intelligence: Visual-Spatial Intelligence

Planning: Formulation Speed

AC: Stress Tolerance

SQ: Influence

Others: Decision Making

Incident 239-B - Clef-Kondraki

Feats (Interpretation A)

Clef speaks with Dr. [redacted], mentioning that he convinced SCP-547-D (SCP-547-D was an adolescent human with the power of raising the surrounding temperature) to wait a few years to join Mobile Task Force Omega-7 (Special Mobile Task Force formed of anomalies)
Persuasion

[1]As Clef and Dr. [redacted] continue talking, Dr. [redacted] informs Clef that SCP-239 (A reality warper lied to as a witch at a magic school in order to control its powers) is experimenting with new "spells", so Clef comes up with a quick solution: pretend to be "Grand Inquisitor Clef, the very terrifying and very stern Magistrate Sorcerer that the Supreme Council of Sorcerers sent to discipline a very naughty witch student who has been breaking the rules" It is known that Clef effectively carried out this deception due to a record of SCP-239.
Deception: Fabrication, Verbal Deception, Acting Skills
Others: Decision Making, Creativity

[2]Clef wrote an email with the subject "STOP ME" stating that he was aware that he possessed an irrational desire to kill SCP-239, and also seemed to know that it was a product of the girl's reality-warping powers, although he eventually regretted it and deleted it, the email was dated 2 days before the incident, the log written by 239 was 3 days before the incident, and the conversation three weeks ago, Clef's effects began the day of the email, implying that the witch girl (SCP-239) began to fear him at that moment, then remembered the deception he planned to perform for approximately 2 weeks and 3 days, and resisted the reality warping for 1 day.
SQ: Self-awareness
AC: Impulse Management, Mental Fortitude

Foresight: Prediction
Others: Memory

Dr. Clef deduced based on two premises: 1. Foundation scientists treat 239 well despite her being an anomaly, and 2. SCP-239 has reality-warping powers. That the witch girl's powers must be causing the Foundation staff to treat her well, and he made the decision to kill her.
Reasoning: Abductive Reasoning, Connecting the Dots
Others: Decision Making

In the two days of preparation time he had for his plan to assassinate the witch girl, he constructed weapons from anti-telekinetic alloy.
Intelligence: Knowledge Application, Crystallized Intelligence
Planning: Preparation Process

Clef stated that his colleagues tend to show mercy to Keter-class humanoid SCPs.
EQ: Emotional Perception

He stated that if his mission failed all data would be relayed to O5, the Unusual Incidents Unit and the GOC, and if he died, the GOC Clef unit would activate the Pizzicato procedure, for this lie he took advantage of the fact that the GOC often uses musical terms, and that the Foundation is aware that he used to be in the GOC, in the future he would clarify that there is no such procedure, but he left it in doubt in case he needed it again.
Deception: Fabrication, Falsification, Bluffing
Inteligence: Musical Intelligence
Others: Information Gathering
Planning: Contingencies

Clef fired a dose of 12 tranquilizer darts at six armed officers (two darts per officer) before they could react, the reaction speed of an average person is 0.25 seconds (visual stimulus), I don't know what that of an SCP

Foundation agent would be, but if we assume they have the reaction speeds of an average person, it implies that Clef managed to fire 12 shots during that limited time (and they were trained agents of the SCP Foundation, so it must have been much less time)
FSIQ: PSI

Clef neutralizes several elements of the foundation's level 1 security personnel by himself.
FSIQ: Battle IQ

Clef notices that the walls and elements of site 17 are changing location, he knows that it would be quite strange if it was the witch girl since she would not originally know what the corridors of the site are like, therefore he deduces that it is SCP-408 (Dr. Kondraki's Butterflies) and hits the metal to check it, now, for this Clef says that he read Kondraki's... (I assume file) which implies that he predicted that Kondraki would be against him.
EQ: Emotional Understanding
Reasoning: Abductive Reasoning, Connecting the Dots
Others: Pattern Recognition
Planning: Contingencies
Foresight: Prediction

Clef, after killing one of Kondraki's copies (implying that he would be willing to kill his friend to achieve his goal) tolerates the pain of multiple burns and continues with his objective.
AC: Stress Tolerance, Perseverance
EQ: Emotional Engagement
Others: Decision Making

Even with his multiple burns, Clef comes up with a plan, his plan is to infect himself with SCP-091-ARC (An infectious tree woman) by hugging her, knowing that if he did this the entire facility would be closed and thus 239 would not escape, his plan worked perfectly, now, 091-ARC did not really

bloom, it was apple blossoms (according to Clef's liar, but we will believe him because his true intentions are never revealed).
AC: Stress Tolerance
Planning: Formulation Speed, Planning Invincibility
Strategy: Building
Others: Prioritization
Deception: Practical Deception

After this, he speaks to SCP-336 (Lilith, whose voice alters the human genome) in an unknown language, believed to be a variant of ancient Sumerian.
Intelligence: Linguistic Intelligence

Clef said he still loves SCP-336, honestly I don't know if it's a lie or not, so I'll leave it as a possible deception feat, but what is a feat is that he shoots himself in the ears as long as it doesn't affect him.
Deception: ¿Verbal Deception?
AC: Stress Tolerance
Others: Decision Making

After Lilith ordered him to tell the truth, he literally said "The Truth"
Others: Creativity

Clef confronts SCP-547-D, withstanding temperatures of over 500 degrees Fahrenheit that burned half of his body (remember that Clef had hopes in 547-D).
AC: Stress Tolerance, Perseverance.
EQ: Emotional Engagement
Others: Decision Making

After shooting Bright, Clef took SCP-776 (a die with real effects like summoning water on a 3) and rolled it in order to get a 2 and freeze a large part of the facility, isolating sector 7 and delaying the entry of Kain Phatos

Crow, as Clef likely predicted that Crow would go looking for SCP-244 (a machine that replaces Crow's abilities, since Crow is literally a dog).
EQ: Emotional Understanding
Others: Creativity
Strategy: Logistics
Planning: Formulation Speed
Foresight

Clef engages in a sword duel against Kondraki
FSIQ: Battle IQ
Intelligence: Bodily-Kinaesthetic Intelligence

[3]During the duel, Clef mentions that the containment methods on SCP-239 have already failed him, possibly indicating he is aware that he is being controlled,
EQ: Emotional Understanding
SQ: Self-awareness

Feats (Interpretation B)

Honestly, Clef is hard to read for one reason: he's a lying bastard. However, it's time to reveal the truth. I had to show you both interpretations.

A Xanatos Gambit is a type of plan where all possible outcomes benefit the winner. Clef is theoretically immune to reality warping, and he's also aware of it. If we interpreted it this way from the start, it would be something like this:

1. Clef really wanted to kill 239, so he intentionally pointed to 239 in his conversation with Dr. [redacted], in order to justify what he was about to do, since everything from here on out was part of his plan.
   Deception: Fabrication, Verbal Deception, Acting Skills
   Others: Decision Making, Creativity
   Planning: Formulation Speed, Long Term Planning

2. Then Clef writes an email pretending to be aware of his despair, then deletes it to be found later.
   Deception: Fabrication, Acting Skills
   Planning: Contingencies

3. During the duel, Clef mentions that the containment methods on SCP-239 have already failed him in order to reinforce his lie.
   Deception: Verbal Deception, Acting Skills
   Planning: Contingencies

4. Even if the plan fails, as Clef justified by being manipulated, the Foundation would perceive SCP-239 as risky.
   Planning: Planning Coverage, Planning Versatility

Supplementary Report 239-B-192

Clef lies to Kondraki (and perhaps to himself) saying that he's the devil who came to kill God and that SCP-239 is God. This is why I know they were lies, but there's a chance they weren't in this canon. He then provokes Kondraki into causing severe damage (probably just for fun).
Deception: Verbal Deception, Acting Skills, Identity Deception,
Manipulation: Direct Manipulation Emotional Manipulation, Individual Manipulation, Individual Manipulation, Abusing Insecurities
EQ: Emotional Management

Clef mentions having tricked Gears in the past.
[Narrative]

Unfinished Business

Unfinished Business I

Clef detected Dr. Lore's lie when she said that was his name.
EQ: Emotional Perception
Others: Discerning Deceit

After Dr. Lore told him he was brought back for an old problem, Clef remembered that it must be either SCP-343 or SCP-239. Remember, he had just come out of cryogenics. Shortly after, he remembered that the head of Project 239 used to be Karrington.
Crystallized Intellect: Memory

Clef detected Dr. Lore's lie when she said Bright was no longer around.
EQ: Emotional Perception
Others: Discerning Deceit

He claims to have eliminated more than 14 reality benders only for the Foundation.
Crystallized Intellect: Experience, Memory

He claims that his "methods" are scaffolding upon which to build; ironically, that in itself is a method, a system with rules for accomplishing something. The rule would be to use the methods as a foundation.
Tactics: Methods

Speaking with 343, he claims to know something he has never told anyone, and would later ask for something, which would make this count as subtle blackmail (Depending on the interpretation, the two of them could be LARPing right here).
Deception: Acting Skills (Likely), Bluffing (Likely)
Manipulation: Blackmail

In the same conversation with SCP-343, he reminds him of a favor from 1989.
Crystallized Intellect: Experience, Memory

He asks 343 to monitor the changes in reality caused by 239.
Planning: Preparation Process, Contingencies

He recognized a pistol in Schmetterling's pocket.
Observation

He killed SCP-239. Now, remember, Clef is (most likely) human, so murdering a child goes against his nature.
EQ: Emotional Management, Emotional Engagement
AC: Mental Fortitude

He immediately recognized ~~Bright~~ ("Dr. Lore") after ~~Bright~~ shot him.
Reasoning: Abductive Reasoning, Connecting the Dots

Clef took SCP-963 (the amulet containing ~~Bright's~~ soul) with gloves and walked through the mirror, taking it with him in his final moments. He also predicted that this would cause ~~Bright~~ to shoot him and hit SCP-093, allowing him to take the amulet forever.
EQ: Emotional Understanding, Emotional Engagement
AC: Stress Tolerance
Others: Decision Making

Unfinished Business: Part II

Clef fired two shots into the back of each guard before they could react.
FSIQ: PSI

Before Clef was cryogenically frozen, it took the Foundation (led by ~~Bright~~) six hours to breach all the defenses around Clef's house. Now, that doesn't mean he engaged in a direct intellectual duel with ~~Bright~~ for six hours; ~~Bright~~ probably just gave the order to capture Clef. But it still implies that Clef single-handedly held off a trained team for six hours using traps.
Tactics: Setting Traps
Planning: Contingencies

~~Bright~~'s Killing Plan

> "Poison him, then burn him. Then, we put 963 through 093 and pretend it never happened."

The plan was devised eleven years before Unfinished Business I during a conversation with Kondraki and Glass, where Glass warned them that the souls had slowly corrupted ~~Bright~~. Clef then devised the plan, which essentially involved having SCP-963 (~~Bright~~'s amulet) pass through SCP-093 (an object connected to mirrors, allowing people with certain psychological characteristics to enter the world beyond the mirrors). The execution was somewhat more complex. ~~Bright~~ woke Clef to assassinate 239. Clef remembered the idea and secured SCP-093 in a small safe, anticipating that ~~Bright~~ would appear after he had accomplished his purpose of destroying 239, thus giving him the opportunity to complete the plan by taking the amulet to the other side.
Intelligence: Memory
Planning: Long Term Planning, Formulation Speed, Preparation Process
Foresight: Prediction, Preclusion

Resurrection Canon

Unfortunately, this canon is not yet finished; therefore, considering the writing pace of the SCP authors and how well-planned this is, it is likely that this section of the Doc will take years to complete.

Yesterday

Clef agrees (practically forced, since O5 asked him to do so personally) to kill key members of the foundation's staff, many of whom had been his friends.
EQ: Emotional Engagement

After murdering Bjornsen, Clef left the following note:
“YOU'VE PUSHED US TOO FAR, BEORNSEN! THIS IS A WARNING TO ALL THE FOUNDATION'S CRIMINALS. REPENT, OR FACE THE SAME FATE.”
Deception: Fabrication, Misdirection

To assassinate Aktus, Clef decided to falsify the paperwork to create an error in the dosage of his treatment.
Deception: Falsification, Misdirection

To murder Kate, Clef poisoned her coffee and then forged notes from her friends in the unusual incidents unit.
Deception: Falsification, Misdirection

Clef spoke with Everett Mann, leading him to suicide.
Manipulation: Direct Manipulation, Individual Manipulation, Emotional Inducement

Clef continued murdering several of his close friends.
EQ: Emotional Engagement

Clef sent Bright's amulet into the sun.
Others: Creativity

He falsified the cause of Kain Phatos Crow's death to make it appear as though he had been given the wrong dose of medication, indirectly causing Roth's death, an outcome Clef had already foreseen.
EQ: Emotional Understanding
Manipulation: Indirect Manipulation, Individual Manipulation, Emotional Inducement
Deception: Fabrication, Falsification, Misdirection
Foresight: Prediction
Planning: Short Term Planning

Clef claims to have killed more than three dozen green guys (reality warpers).
Crystalized Intelect: Experience

Clef predicted that Moose would try to escape and planted a bomb in his car. He was then trapped in a maze by Moose. The first thing that came was darkness; he knew it wasn't space because he couldn't see any stars. The fact that he was moving suggested that he was alive, managed to escape using his ocular implants to see inside (Ocular implants allow him to process large amounts of information). It took him half an hour, the labyrinth was constantly changing, so he had to adapt quickly. After escaping, he shot at the illusion of Moose to confirm that he hadn't failed.
FSIQ: CPI
EQ: Emotional Understanding
Adaptability: Environmental Adaptability
Observation
Reasoning: Inductive Reasoning, Abductive Reasoning
Foresight: Prediction
Planning: Short Term Planning, Contingencies

Clef killed Kondraki (basically his best friend/occasional enemy/boyfriend).
EQ: Emotional Engagement, Emotional Management

Clef sensed something approaching with his third eye and then heard a voice saying that everything was repeating itself.
Perception
Observation

Clef already knew that SCP-2000 wouldn't be what saved humanity, but rather something beneath it. This was because the world was literally ending, so there was nothing SCP-2000 could do. Therefore, it had to be something else within the structure, and since nothing was visible above it, he deduced that it must be underneath.
Reasoning: Deductive Reasoning

Clef heard footsteps behind him.
Perception

When Light says, “Hello, Clef. My name is Sophia Light. You killed my ex-boyfriend. Prepare to die,” Clef identifies the reference, which requires prior knowledge.
Crystallized Intellect: Knowledge

And then the world starts again…

Contingency

Clef seems to remember the terms of an agreement made nine years ago.
Crystallized Intellect: Memory

Clef explains that TAV-666, the task force for which Clef was selected and for which he selected Adams, has a name in the Hebrew alphabet, unlike any other mobile task force, because they officially don't exist. The 666 stands for the Number of the Beast. Numerologically speaking, it's the number of Nero, the Roman Emperor who stood by and fiddled while Rome burned. The man whom the early Christians hated so much that they turned his name into that of the Devil himself. And while he isn't the Devil, he is the leader of TAV-666, whose duty is the same as Satan's: to oppose and keep Alpha-9 (the new group that O5 wanted to create, reopening Pandora's box, that is, a task force of anomalies) under control.
Crystalyzed Intellect: Knowledge
Thinking: Analogical

Clef claims to know the O5, and according to his understanding of them, they view all their personnel as disposable for the greater good.
EQ: Emotional Understanding

Since the TAV-666 operates in secret to everyone except O5, Clef must falsify records of everything it does (by the way, the way he did it was by

creating the Mobile Task Force Lambda-2 "Dr. Clef's Bisexual Stripper Assassin Squad")
Deception: Fabrication, Falsification

What's In A Name?

Clef is able to discern a faint smile from Adams through her office window, even though she was trying to appear serious and focused.
EQ: Emotional Perception
Observation

Girls' Night Out Trilogy

Clef sent Adams to approach Iris (SCP-106) and gain her trust. They went shopping and such, and then to a party. Clef later called to monitor the progress of the plan, thus exerting influence over Alpha-9 from before its official creation.
SQ: Social Engineering
Strategy: Strategy Building
Planning: Preparation Process
Manipulation: Indirect Manipulation, Individual Manipulation

Adams fue demasiado por su propia cuenta e invitó a Iris a beber, lo que desencadenó que la COG atacara, y la COG averiguó sobre el proyecto de resurrección de Alpha-9, así que O5-7 obligó a Clef a activar la fase 2.

LolFundation Canon

This is, in essence, a joke canon, I don't even read it in order, I just look for a random article from this every now and then if I want to have a laugh at parodies of the old SCP, so you're perfectly entitled to skip it, but it does have a couple of feats.

Send in the Clowns

Clef organized an experiment by releasing SCP-682 into the middle of the city, using the excuse that it was to see how it reacts in urban environments, when in reality it was to test how long Kondraki would last alive riding 682.
Planning: Coverage
Deception: Fabrication

Dr. Cimmerian Is No Longer Allowed To Use Temporal Anomalies In Order To Travel Back in Time So He Can Kill Hitler

Both Dr. Cimmerian and Dr. Kondraki travel to the past to assassinate Hitler, but they all decide to do so in the Berlin bunker to avoid changes in the timeline. When they arrive, it is shown that Clef, wearing an SS uniform, got there first and killed Hitler himself. This seems to imply that Clef somehow infiltrated Hitler's inner circle in the bunker to kill him, for that, he must have misdirected Hitler to think that he was trustworthy. Furthermore, as soon as he leaves and sees the other two doctors, he realizes that Cimmerian and Kondraki had reached the same conclusion as him: to kill Hitler in the bunker, which would show a really good faster thinking and inductive reasoning, also EJ to know that Cimmerian and Kondraki would be the kind of people that would do that just for fun, although not that good since they were his friends.
SQ: Social Integration
Reasoning: Inductive
Thinking: Faster, Divergent
Deception: Misdirection

SCP’s

DrClef, as an author, has written several SCPs. Although these are his own work, in one tale (which is the character's ramblings), he mentions 001's proposals:

> Let’s see, which 001 proposals are true? We know mine’s not, because I’m a liar. Everything I say is a lie, including this. Locke’s can’t be real, because that obviously didn’t happen, unless that’s one of those CK reality shifts again. The Factory is real, so Bright’s proposal is at least somewhat true. Gear’s Prototype I’ve actually seen, so that one’s true at least.

This implies that in that universe, the author's articles are the character's own. That said, Clef would in fact possess several feats of descriptive analysis and containment strategies (Note: Most of the articles analyzed here from this point forward are almost copies and pastes of the original articles, I don't recommend reading it; the SCP formatting is lost, and it's too much for a simple document. You can skim it quickly if you want).

SCP-001 - The Gate Guardian

Clef describes him as a humanoid entity approximately 700 cubits tall, with several luminous wing-like appendages emerging from his shoulders, back, temples, ankles, and wrists. He is estimated to have around four wings, although the maximum limit is 108. With a sword or knife, he is not restrained, but measures are taken such as maintaining positive relationships with Abrahamic religions and having religious or blessed objects on hand when attempting anything.
Planning: Contingencies
Strategy: Strategic Shielding, Strategic Execution
Observation
SQ: Resource Management

Deception: Fabrication, Falsification, Misdirection (In case it's not the real SCP-001)
Others: Descriptive Analysis, Risk Calculation, Gathering Statistics

SCP-016 - Sentient Micro-Organism

SCP-016 is described as a bloodborne pathogen recovered from a mine worker. It has three phases: the incubation phase, which lasts from 24 hours to 2 years and has symptoms similar to a cold; the second phase is a hemorrhagic fever; and the third phase, the subject will begin bleeding from all orifices. Should the subject survive, SCP-016 will revert to its incubation state. If the subject is subjected to a highly stressful situation (such as a life-threatening crisis), the organism will shift its survival tactic from rapid reproduction to rewriting the host's DNA and stimulating rapid cell division. The containment method is to keep it within the confines of a five by five by five meter room at all times, at a temperature not exceeding zero degrees Celsius. SCP-016 must remain in the Petri dish within the containment cube at all times, unless otherwise directed by Level 4 or O5 personnel. Full documentation of SCP-016 experimentation must be submitted before and after sample and duplicate collection. Failure to follow these procedures will result in discharge or reassignment to Class D personnel. Due to their similarities as fatal contagions that stimulate the production of excess organs, a possible link to SCP-1801 is under investigation.
Strategy: Strategic Shielding, Strategic Execution, Strategy Adaptability, Strategy Efficiency, Methods
SQ: Resource Management
Reasoning: Inductive Reasoning
Others: Descriptive Analysis, Risk Calculation, Gathering Statistics, Pattern Recognition

SCP-031 - What is love?

SCP-031 is described as a 7500 kg amorphous organism that infiltrated the infrastructure of a hotel in Pyongyang, who chooses victims and devours them by pretending to be someone close to them. The SCP Foundation collaborated with North Korea to keep the SCP secure (using the reasoning

that an authoritarian government will not disclose information). Three secondary towers housing security systems are used to prevent the object's psychic energies from leaking out. Local government forces use personnel in protective suits, armed with flamethrowers and chemical sprayers, to decontaminate areas affected by SCP-031.
Manipulation: Negotiation
SQ: Resource Management
Reasoning: Inductive Reasoning
Strategy: Strategic Shielding, Strategic Execution, Methods
Planning: Contingencies
Others: Descriptive Analysis, Risk Calculation, Consistency, Risk Management

SCP-048 - The Cursed SCP Number

For this I think it is only necessary to leave the description of the SCP, since it is a short article: SCP-048 has long been considered the "cursed SCP number" by SCP staff: any items given this designation tend to be destroyed, decommissioned, stolen, or otherwise lost to the Foundation, usually through no fault of any individual person. In addition, personnel assigned to SCP-048 in its various incarnations have had a 50% higher rate of turnover due to death, dismemberment, and disciplinary action. Whether or not the number 048 actually has any supernatural qualities is unknown, but given the superstition around this number, the designation has been removed from the catalog in order to help maintain employee morale
SQ: Conflict Resolution
Reasoning: Inductive Reasoning
Others: Descriptive Analysis, Risk Calculation, Gathering Statistics, Pattern Recognition

SCP-231 - Special Personnel Requirements

Assigned personnel must have passed several psychological tests and will rotate through a month of therapy. SCP-231-7 must remain immobilized in a hospital bed at all times, except for the purposes of Procedure

110-Montauk. Hydration will be provided via intravenous drip. Feeding will be administered twice daily via nasogastric tube by authorized medical personnel who have not taken the Hippocratic Oath. Under no circumstances will narcotics, anesthesia, or other unauthorized medications be administered to SCP-231-7.
Procedure 110-Montauk must be performed at least once every 24 hours by Class D personnel. SCP-231-7 must be kept in a soundproof containment cell adjacent to the containment cells of six Class D personnel assigned for the purposes of Procedure 110-Montauk. Surveillance cameras will be installed throughout the cell, 24 hours a day, to monitor every inch of the cell. The faulty surveillance equipment will be replaced immediately by personnel who have undergone psychological evaluation. The doors will be magnetically locked and can only be opened with the affirmative action of the control and monitoring center.
The description is quite redacted and censored, but, to summarize, they are the Scarlet King's brides who will give birth to the Scarlet King's children.
Strategy: Strategic Shielding, Strategic Execution, Strategy Efficiency, Methods
SQ: Resource Management
Reasoning: Inductive Reasoning
Others: Descriptive Analysis, Risk Calculation

SCP-233 - 23-Sided Polyhedron

SCP-233 is described as a 23-sided polyhedron, each face composed simultaneously of an equilateral triangle and a straight line. Its exact physical composition cannot be reproduced in either three or two dimensions. SCP-233 possesses the unusual property of altering the mathematical laws in its environment, causing rounding errors unless calculations are performed in base 23. However, mathematical calculations in base 23 are executed at a speed 23 times faster than normal. SCP-233 appears to be activated not by the actual physical properties of the object in question, in an empirical sense, but by the perceptions of nearby observers. For example, it is safe to manipulate SCP-233 with a 2.74 m long pole. SCP-233 must be kept within a vanadium-lined cubic container

with dimensions 23 x 23 x 23. The unit of measurement is irrelevant. A 23-meter secure zone will be established around the object: no Class D personnel, older or younger than 23, may enter this zone. For optimal results, it is recommended to use Class D personnel whose birthday falls on the 23rd of each month. Firearms are prohibited, except for those using .2323 caliber ammunition for special purposes. Shift changes will occur at 23 minutes past the hour, with the last change at 23:23 GMT. The chemical decomposition of the affected object occurs at an accelerated rate: direct contact causes the immediate destruction of the object in question by decomposition into its component atoms in 0.23 seconds. At the recommendation of Dr. A. Clef, the research committee has requested the redesignation of this object as SCP-2323.

Strategy: Strategic Execution, Strategy Adaptability, Strategy Efficiency, Methods

SQ: Resource Management

Reasoning: Inductive Reasoning

Planning: Contingencies

Others: Descriptive Analysis, Pattern Recognition, Creativity, Gathering Statistics, Risk Calculation

SCP-297 - Stealy Dan

SCP-297 is to be kept in a standard lockbox at Site 19's High Value Item Storage Facility. Standard positive-action defenses (explosive, chemical, biological, and memetic) are to be in place at all times, according to standard operating procedure. Personnel wishing to utilize SCP-297 for experimental or field purposes must fill out a Form-32 and submit it to the head of Research and Containment. SCP-297 is described as a transparent plastic vibrator, approximately 30 cm in length, 5 cm in width. Examination has determined that the internal structure has been heavily altered, and that the standard 6 V power supply has been converted into what appears to be a micronized nuclear reactor powered by a small quantity of plutonium. When turned to the highest intensity setting (labeled "suicide"), SCP-297's vibration frequency swiftly increases to upwards of 200,000 kHz. If the upper portion of the device is touched to any solid material, SCP-297 will change frequency to one that causes a positive

harmonic feedback loop in the object, causing the object to lose cohesion within sixty seconds of continual contact. This invariably kills organisms that it is exposed to.
Strategy: Strategic Execution, Strategy Efficiency
SQ: Resource Management
Reasoning: Inductive Reasoning
Planning: Contingencies
Others: Descriptive Analysis, Pattern Recognition, Risk Calculation

SCP-447 - Ball of Green Slime

SCP-447-1 is to be kept within a fifty-gallon clear plastic container at all times, monitored by camera by a Security Level 3 or higher staff member to prevent overflow. Area is to be maintained at Level 1 Clean Room status to prevent contamination by foreign matter at a site at least 10 km from any cemetery, morgue, or mortuary. Under no circumstances is SCP-447 allowed to come into contact with dead bodies. Because SCP-447-1 constantly excretes a viscous greenish slime (designated SCP-447-2) at a rate of approximately 10 cc/hour, a Class D personnel in good physical condition is to be detailed to harvest the excreted slime at least once per day. SCP-447-2 can be harvested using any appropriate equipment, so long as safety procedures are carefully adhered to in order to prevent on-site fatalities. Slime can be transported in an ordinary sealed glass or plastic container through any standard mode of transportation, provided that there is no risk of the slime coming into contact with a dead body en route. The slime is edible, and reportedly makes a good salad dressing. Adding 10 cc of SCP-447-2 to one gallon of gasoline improves fuel efficiency by 150%. Furthermore, SCP-447-2 can be refined (see Appendix 447-C: Distillation Process) into a useful lubricant approved for use at all SCP Foundation installations. All staff assigned to SCP-447 are to be screened by polygraph for any suicidal, necrophiliac, or homicidal tendencies. In addition, all staff assigned to SCP-447 must be in good health and good physical condition, and must adhere to on-site safety regulations at all times. This is to minimize the risk of SCP-447 or its generated slime coming into contact with a dead body. SCP-447-1 is a green sphere approximately 5 cm in diameter, with a spongy surface

texture and a weight of 1.37 kg. The object is warm to the touch, at a temperature similar to that of the human body, although its internal temperature is slightly higher. Personnel handling SCP-447-1 have not reported any adverse effects, provided that SCP-447-1 does not come into contact with a corpse.

Reasoning: Inductive Reasoning
Planning: Contingencies
Others: Descriptive Analysis, Pattern Recognition, Creativity, Gathering Statistics, Risk Calculation

SCP-450 - Abandoned Federal Penitentiary

SCP-450 is described as the death row block of the abandoned [redacted] Federal Penitentiary in [redacted], [redacted]. Distance from entrance to the execution chamber is approximately 166.5 meters. A complex pattern, drawn in human blood, is located on the wall behind the electric chair. This pattern slowly degrades over time due to normal environmental decay and must be maintained regularly. The cell block is inhabited by what appears to be one or more hostile spectral entities. Attracting the attention of said entities is invariably fatal, and may or may not occur due to one of the following criteria:

- Entering the cell block by any means other than the main door.
- Moving at a speed greater than 0.25 meters per second.
- Staying in the cell block for more than 25 minutes at a time.
- Entering the cell block more than once every 24 hours.
- Operating any electronic device.
- Any sound louder than ca. 25 dB.

SCP-450 is to be kept locked and secured at all times, except for monthly maintenance and cleaning as detailed below. Any civilians or personnel who enter SCP-450 at any other time are to be considered lost, and no rescue attempts are to be made.
Strategy: Strategic Shielding, Strategic Execution, Strategy Efficiency, Methods

SQ: Resource Management
Reasoning: Inductive Reasoning
Others: Descriptive Analysis, Pattern Recognition, Creativity, Gathering Statistics, Risk Calculation

All They Want is the Blood

This is the supplemental account of SCP-450. Clef is accompanied by Xavier Garcez. After Clef speaks with him and Xavier confirms he has supplies in his truck, Clef proceeds to describe Xavier's truck in detail and where he parked it. He later tells Xavier that he is going to die there like one in four rookies, intimidating him to ensure he takes things as seriously as possible. Clef tells Xavier that he created the containment symbol based on the Seal of Solomon, believing it had power over spirits, but that he currently hypothesizes it only works through blood. He then teases Xavier with a yodeling song, after which the spirits take Xavier, forcing Clef to use his own blood on the symbol. Clef remains calm throughout the entire story.

SQ: Resource Management
Reasoning: Abductive Reasoning
AC: Stress Tolerance, Impulse Management, Discipline, Mental Fortitude
Manipulation: Intimidation
Others: Pattern Recognition, Creativity

SCP-572 - Katana of Apparent Invincibility

SCP-572 is described as a sword of the "[redacted]" model manufactured by [redacted]. The weapon is badly balanced for combat use, is made of substandard steel, and does not hold an effective combat edge. However, the weapon has the unusual psychotropic quality of convincing any person who holds it of its "balance" and "cutting power", as well as conferring feelings of great strength and invincibility. This effect cannot be countered by any known means, and the affected subject will continue to maintain these beliefs so long as they hold the blade. Subjects will be compelled to perform dangerous stunts using SCP-572, including

but not limited to: attempting to cut a moving car in half, slicing through a bullet fired from a rifle, cutting through another sword, and engaging in a live-steel duel with a trained period swordsman. Because of the prevalence of unnecessary cutting edges, 75% of such attempts end with serious injury being inflicted upon the user. Should the sword be successfully wrested away from an affected subject (preferably using long-handled tongs to prevent the retriever being affected), all psychological effects can usually be expunged by a single swift blow to the back of the subject's head. SCP-572 may be safely kept in a locked safe-deposit box at Site 19's High Value Item Storage Facility. Standard positive-action defenses (explosive, chemical, biological, and memetic) are to be in place at all times, according to standard operating procedure.
Strategy: Strategy Efficiency
Reasoning: Inductive Reasoning
Others: Descriptive Analysis, Pattern Recognition, Gathering Statistics

SCP-668 - 13" Chef's Knife

SCP-668 is described as a 33cm (13in) chef's knife with a rosewood handle and full-tang construction, crafted at some point from the late 1930s to the early 1940s. When first acquired by field operatives, SCP-668 was in badly rusted condition, with heavy pitting from blood stains and other bodily fluids trapped in micro-crevices within the blade. Following thorough analysis, these irregularities were removed for aesthetic purposes. This has had negligible, if any, effect on SCP-668's special properties. What is clear, however, is its current properties. When carried by a human or humanoid entity with violent intent towards another human or humanoid entity, SCP-668 broadcasts a psychic signal that renders all sentient beings with a Psionic Resistance Index of 97 or lower incapable of assisting the victim. Affected entities report a sudden sense of apathy while under SCP-668's influence: sensory input is not affected, and affected entities report feeling revulsion and horror, but are simply incapable of acting, even indirectly, to assist the victim. SCP-668 is to be transferred to a locked safe-deposit box at Site 19's High Value Item Storage Facility. Standard defenses against intrusion (explosive, chemical, biological, and memetic) are to be in place at all times, according to standard operating procedure. SCP-668 may only

be removed from its safe-deposit box by personnel with Security Clearance 2 or higher. Individuals wishing to make use of SCP-668 outside Site 19 must first submit a Form-668 Requested Course of Action form to O5-11 and be fitted with an explosive killswitch collar on a 24-hour timer before taking SCP-668 into the field. An Auditing Officer with Security Clearance 4 or higher must confirm that SCP-668 has been returned to its safe-deposit box before the collar is deactivated.
With the ending of the Omega-7 project, no further attempts to weaponize SCP-682 or SCP-668 are to be attempted.

Planning: Contingencies
Others: Descriptive Analysis, Pattern Recognition, Gathering Statistics, Risk Calculation

SCP-784-ARC

It's described as the brain of a former agent connected to a network of nanomachines (yes, I had to summarize it like this to save you from reading the description), it's an ARC (it had a meh writing so they invented a way to destroy it and never use it again, it still exists because it's in other articles) anyway, for containment procedures: SCP-784 was kept in a reinforced concrete containment cell with interior dimensions 10m x 10m x 10m and walls 2m thick. Said container was to be kept immersed in a 100 percent acetone bath to a depth of at least one meter: under no circumstances was the holding container to be removed from this acetone bath, except for weekly cleaning and resupply (see below). SCP-784's biological components require a supply of nutrients, to be provided in an oxygenated electrolyte and glucose bath (see Supplemental Document 784-A). As SCP-784 was capable of filtering and circulating said liquid on its own, all that was necessary was for the reservoir to be recharged on a weekly basis. At least two Class-D personnel with acetone sprayers were to be kept on standby while the third performed the resupply and a sonar inspection of the holding container: any weak points were to be

immediately patched. Should the assessment determine that the structure was dangerously unstable, said container was to be sealed within a secondary shell with interior dimensions 14m x 14m x 14m. No electronic devices, silicon glass, or metals were to be permitted within 500m of SCP-784. Personnel maintaining SCP-784 were to be briefed on the dangers of working around a 100% acetone solution, and to be provided respirator gear and hazardous materials suits.

SQ: Resource Management
Reasoning: Inductive Reasoning
Planning: Contingencies
Others: Descriptive Analysis, Pattern Recognition, Risk Calculation

SCP-807 - Heart Attack on a Plate

SCP-807 is described as a salmon-colored ceramic dinner plate 20 cm in diameter with the words "Last Chance Diner" printed on the edges in white. A small piece has been chipped out of one edge of the plate, just above the letter D. There are no manufacturer's marks, and to date, all efforts to find the restaurant in question have failed. SCP-807 transmutes any food served upon it into a variation of its original form with high concentrations of fat, sodium, and cholesterol. Once transmuted, the food in question is enhanced in flavor and aroma to preternatural levels, to the point where the desire to consume said food becomes nearly irresistible. Anyone who does consume said food, however, will undergo cardiac arrest within five minutes of finishing their meal, due to sudden and massive fatty buildup in the major arteries. In some cases, immediate bypass surgery has been shown to be effective in saving the life of a subject. SCP-807 is to be kept in a locked safe deposit box at Site 19's High Value Item Storage Facility. Standard positive-action defenses (explosive, chemical, biological, and memetic) are to be in place at all times, according to standard operating procedure. SCP-807 may be removed from its storage container with proper authorization for experimentation. All personnel working around SCP-807 must be well-fed, and should wear oral restraints to prevent accidental ingestion.

Strategy: Strategic Shielding, Strategic Execution, Strategy Efficiency, Methods
Reasoning: Inductive Reasoning
Others: Descriptive Analysis, Pattern Recognition, Gathering Statistics, Risk Calculation

SCP-823 - Carnival of Horrors

SCP-823 is described as an abandoned theme (amusement) park located in [redacted], [redacted]. The site was abandoned in [redacted] after several violent events resulting in the deaths of park attendees. A complete list of said events is included in Supplement 823-01-13, "Civilian Deaths Attributed to SCP-823." SCP-823 is to be secured by no fewer than six (6) on-site personnel until such time as decontamination protocols can be established and the artifact in question neutralized. Personnel must respect a twenty meter (20 m) safe zone around the currently established Red (No Entry) Zone at all costs. Any individual, civilian or not, who enters the established Red Zone is to be terminated immediately by sniper fire. Should music or piping be heard emanating from within the Red Zone, Foundation personnel on-site are to immediately don protective earplugs and withdraw from their positions to a two kilometer (2 km) perimeter, beyond the currently established Yellow (No Civilian Presence) Zone, and inform Foundation scientific personnel immediately. Following the realignment event, Foundation science personnel will survey the area and determine the boundaries of the new Red and Yellow zones using Procedure 823-1-Alpha. The apparent range of the Red (No Entry) Zone has increased in size by 5% during that time. Rate of expansion appears to be accelerating at a linear rate.
Strategy: Strategic Shielding, Strategic Execution, Strategy Efficiency, Methods
Planning: Contingencies
Reasoning: Inductive Reasoning
Others: Descriptive Analysis, Pattern Recognition, Gathering Statistics, Risk Calculation

SCP-953 - Polymorphic Humanoid

SCP-953 is described as a female Red Fox (Vulpes vulpes) approximately 8 kg in weight, with a spine that splits around the 26th vertebra into nine separate tails. Subject displays polymorphic properties, however, allowing it to take the form of various other objects and beings (most commonly, an attractive Korean female).1 Subject will display some vulpine aspect (ears, tail, paws, eyes, fur, voice, mannerisms) in all of its alternate forms: this can serve to identify the subject should it attempt disguise, although SCP-953 will attempt to conceal its tails through clothing and other methods. In addition to polymorphic abilities, SCP-953 displays moderate level psionic abilities, namely suggestion and telepathy. Although insufficient to fool an outside observer, an entranced subject can be convinced of a variety of false facts, including the nature of SCP-953, its own nature, and the nature of things around it. SCP-953 is to be kept in a Type 4 containment cell (4 m x 3 m x 3 m) at the end of Hallway 99 at Site-17. Subject is to be provided the following: 1.5 kg of fresh liver daily for consumption. Clean drinking water in plentiful quantities.

Clean bedding (futon and blankets) to be exchanged by the subject and laundered weekly. Small luxury items (plum wine, reading materials, etc.) may be provided as an occasional reward for good behavior as part of psychological conditioning.

Direct human contact with SCP-953 is strictly forbidden due to SCP-953's mind-altering properties; for this reason, all personnel must respect a 100 m safe zone when the hermetically sealed door is opened. Delivery of food and other items will be carried out by an automated robotic assistant. Should containment fail, SCP-953 can be theoretically terminated by gunfire; however, due to its nature, recognizing SCP-953 may be difficult. Because of the inadequacy of purely physical containment procedures to control SCP-953, psychological containment is also necessary. For this reason, the approach to SCP-953's containment chamber is to be lined with open-cage dog kennels, preferably of the Korean Jindo or American Foxhound breed. SCP-953 displays an extreme phobia of domesticated canines, and will not pass within 10 m of one, especially when canines are barking or alert.

SPC-1764

This is an SPC, which implies it's from the Shark Punching Center, an organization from another universe, and as such, it can't be used to scale to Clef, but it can be used to scale to Composite Clef, since (according to my interpretation of that tale) the person who wrote the article would be a version of Clef from another universe, therefore: The object in question is to be maintained in a cryogenic suspension within a bath of liquid nitrogen. Should the temperature of the object exceed -210 degrees Standard, auditory and visual alarms will go off to warn all personnel in the area to retreat to a safe distance of no less than two hundred Standard Units until a specialized On-Site Response Team can be assembled to restore safe operating parameters. Under no circumstances are untrained personnel to enter the operational area without the permission of a Second Circle or higher authority. Particularly interesting to DARD researchers is the use of the term "Special Containment Procedures" itself. First of all, the phrase indicates that the primary mission of this alternate reality's organization is the containment and safekeeping of Supernatural Phenomena, rather than research and exploitation of such. In addition, the use of the term "Special" may indicate that Supernatural Phenomena are considered a rare event in this alternate universe, indicating an alternative resolution to the Teller-Einstein event. In addition, the use of the term "K-t-r" as an object's classification indicates that the alternative organization feels safe in using a kabballistic term of power in a poetic sense, as an indication of an object's level of reality alteration, indicating that Unified Thaumatology is either an

unknown phenomenon in the other world, or that research into UT has not yet discovered the Jericho Information Theory. Further evidence that the alternate universe has not yet discovered or formulated JIT can be found in the casual and cavalier way in which the alternate universe's casefile refers to the object in question by its casefile number, indicating that Applied Nomenclature is not yet a well-understood field of study in the alternative universe. It has, however, been theorized that at least some understanding of JIT does exist, as the alternative casefile contains significant amounts of censorship and redaction of information, indicating that at least some rudimentary understanding of information warfare may exist. The conclusion of the Theoretics Department is that a localized information anomaly has formed in relation to this object between two parallel membrane universes in a localized space-time.
Strategy: Strategic Shielding, Strategic Execution, Strategy Efficiency, Methods
SQ: Resource Management, Relationship Management

SCP-1949 - Jonathan Harris

The article is a bit long (I mean, to copy and paste, although, honestly, it's quite interesting, I recommend it). Basically, it's about a subject named Jonathan Harris who is being held captive and must be given whatever he wants against his will. Harris's containment procedures are in a manuscript, although some details and the execution remain the responsibility of the foundation, and as such, we have assigned them to Clef.
Strategy: Strategic Execution, Strategy Efficiency, Methods
SQ: Resource Management
Others: Descriptive Analysis, Risk Calculation

SCP-2317 - A Door to Another World

It is an entity known as the Devourer of Worlds, contained behind a door to another world and sealed with chains. The article has multiple iterations, each revealing more information (which is why I didn't just copy and paste it like I did with others). The mere fact that Clef can write this is already a feat of influence, knowing that he doesn't have all those credentials. Therefore, he must be an active collaborator in the containment. Furthermore, most iterations refer to a false procedure to maintain calm.
Strategy: Strategic Execution, Strategy Efficiency
SQ: Influence, Resource Management
Deception: Fabrication, Falsification, Misdirection, Omission
Others: Descriptive Analysis, Risk Calculation, Creativity

SCP-2461 - Aftermath

It is (basically because this article is also too long to copy and paste) a Nazi UFO, which was attacked by the GOC. Now, the thing is that all the anomalous things inside it were cataloged and contained and classified (along with it) as parts of SCP-2461: SCP-2461-A, SCP-2461-B, SCP-2461-C1 through C12, SCP-2461-D1 through D10, SCP-2461-E1 through E4, SCP-2461-F through Z and SCP-2461-ALEPH through HE. The containment procedures are as follows: Following the accidental death of Dr. [redacted] and the rest of the SCP-2461 research team, any further research on SCP-2461 is prohibited without the unanimous consent of the O5 Council. The remaining artifacts of SCP-2461 are to be placed in the High Security Containment Unit of Armed Containment Site 2461. Access to SCP-2461 is not permitted without the unanimous consent of the O5 Council. Anti-theft measures implemented at Armed Containment Site 2461 are classified under Protocol 999-2461-Gernsback. The use of lethal force is authorized to prevent the theft of objects from SCP-2461.
Strategy: Strategic Execution, Strategy Efficiency, Methods
Others: Descriptive Analysis, Risk Calculation

SCP-4960 - Why the Foundation Funded a Hentai to Awaken a Sumerian Love Goddess (OR: How I Learned to Stop Worrying and Love Kedesh-Nanaya) (Yes, that's the article's name)

SCP-4960 is described as the physical manifestation of Kedesh-Nanaya, a Bronze Age sex and fertility goddess of beauty, carnal pleasure, and erotic femininity. SCP-4960 is housed in a Class-A suite at Site-17. Due to a history of cooperation with the Foundation, SCP-4960 has been granted Level 2 Privileges, although contact with non-cleared personnel is forbidden. In order to maintain the efficacy of Procedure 166-Anahita, the Foundation has commissioned several artists (including an animation studio) to produce graven images1 for Procedure 166-Anahita. As the continued efficacy of Procedure 166-Anahita requires a constant influx of new graven images, a special account has been established to fund these works through several sockpuppet accounts on multiple popular e-commerce and art gallery websites. This account is refreshed every two weeks by the fiscal calendar. Contact [redacted] in the Financial Services department if additional funds become necessary (You can probably guess what that procedure is; anyway, they published artwork online to be mass-produced)

SCP-8009 - Her Red Right Hand Protects Us

This article is a continuation of the aforementioned SPC, and as such, it's somewhat multiversal. In this, it can be confirmed that the others are not multiversal versions of Clef (which does not necessarily rule out the SCP, you can continue using it to scale to comp Clef if you wish, since the other iterations are different articles, and the interpretation about who writes them in the SCP universe is confusing, let's just leave it at scaling the foundation

version based on this) The description is as follows: SCP-8009 is a free-standing pointed-trefoil archway made of a combination of oak wood and wrought iron. At the apex of the archway is carved a celtic-knot pattern consisting of two concentric trefoils, the outer trefoil being inverted. Geometric patterns corresponding to thaumaturgical runes have been carved into the structure and filled with a mixture of silver powder, grave dirt, and collagen-based adhesive.4 SCP-8009 instances manifest approximately once per year, on average. Manifestation is accompanied by the aforementioned increase in local ambient Hume levels and Aspect Radiation spike, a side effect of SCP-8009's physical manifestation in our universe. Over the course of the next 24 hours, the geometric runes carved into the SCP-8009 instance will begin to emit high-energy ionizing radiation, further manifesting as a bright blue glow similar to Cherenkov radiation.5 Upon reaching full charge, SCP-8009 will activate, forming a linkage between our universe and an alternate universe (designated SCP-8009-B). SCP-8009 manifestations are always preceded by a sudden spike in ambient Hume levels in the high 100s to 400s, followed by a burst of Aspect Radiation in the ten-thousand kiloCasper (Blue, Sharp, Tight) range. Detection of these phenomena is grounds for deployment of Mobile Task Force Delta-20 ("Murderhobos")1 unless hostile action from outside agencies is anticipated.2 Prevention of SCP-8009 activation is the preferred containment method. 3 This is most easily accomplished by physically destroying the SCP-8009 instance after manifestation but before activation. Should the SCP-8009 instance activate, physical destruction is not recommended unless overseen by an approved thaumatologist. The primary danger from SCP-8009 occurrences comes from the entities that emerge upon activation (collectively categorized under SCP-8009-A). SCP-8009-A instances should be terminated without prejudice, and the corpses disposed of by a Hazardous Materials Disposal team equipped for dealing with high-energy ionizing radiation sources. Should an SCP-8009-A instance escape termination, dispatch of other Mobile Task Force units may be authorized upon approval by Level 4 or higher authority. Under no circumstances are Foundation personnel to enter SCP-8009 for any reason.

SCP-8109 - FRIGOPHOBIA: A dish best served cold

This article is currently being edited because someone wrote about the situation they were experiencing at the site (an enemy attack) and did not survive. I wouldn't have finished editing that part due to the destruction of RAISA (the foundation's archives). However, the rest of the article was previously written and we will analyze it as such: As of 07-22-2024, 10 vials of SCP-8109 (each containing 10 ml of the active agent in a saline suspension) are known to exist. One of these vials (SCP-8109-1) was confirmed destroyed during experimental testing. Another vial (SCP-8109-2) was utilized by unknown hostiles during a raid on Site-76 on 08-29-2016. The eight remaining vials are under secure storage at Site-76 «footnote 1». As victims of SCP-8109 exhibit anti-entropic properties, rapidly absorbing heat from the surrounding area, proper storage of cadavers is a priority. Site 76's deep chill storage facility will suffice for this purpose. Should an SCP-8109 victim be encountered in the wild, Mobile Task Force Kappa-Five ("Vonnegut's Nightmare") will be dispatched to sequester and secure the cadaver. SCP-8109 is an anti-entropic catalyst. In the presence of a saline liquid, SCP-8109 will undergo a rapid anti-entropic endothermic reaction, resulting in a sudden temperature drop to near absolute zero (approx. -270 degrees Celsius), There's also a section explaining its history; it was created by Thoth Industries at the request of the Bowe Commission, and it was a project for military purposes.
