BB's purpose is about creating a case aka puzzle that L or the person L sent can't solve, specifically: give them hints, lead to the final step but block it right there to let the case become a case that L cannot solve, if successful, B will win L.

By the way, Los Angeles BB also means L.A.B.B -> L after Beyond Birthday, not the author thought of a name for it :v Introduction to 3 victims of BB: Believe Bridemaid Quarter Queen Backyard Bottomslash Inference + Creativity + Manip: Regarding the common characteristics between the cases, each case has a Wara Ningyou doll in a closed room: case 1 4 children, case 2 3 children,
case 3 1 child.

Based on the first photo of the victim's body, BB showed that these were Roman numerals corresponding to the shape of the wounds on the victim's chest, including the letters: I - 1 ; II - 2 ; III - 3 ; IV - 4 ; V - 5 ; VI - 6 ; VII - 7 ; VIII - 8 ; IX - 9 ; X - 10 ; L -50 ; C -100 ; D -500 ; M - 1000 => put together we have the numbers: 16, 59, 1423, 159, 13, 7, 582, 724, 1001, 40, 51 and 31, and say that maybe it means numbers but can also be distracting. The purpose of self-inferencing puzzles is to guide and suggest Misora (of course, you have to think well to create your own puzzles).

---> Leads Misora to a room with the excuse that it has discovered more clues that it is a bookshelf containing 11 books of Akazukin Chacha

-----> Hints about having 13 volumes but missing volumes 4 and 9 Faced with the hypothesis that the owner seemed to have given up, BB still insisted

---> Misora was forced to deduce the study of the stack of books. The stack of books is packed very tightly, while removing 2 will leave a big gap. BB suggested the number of pages for the 2 volumes as 192 and 184 according to Naomi's question.

BB holds the book with page number = 192+184 = 376 pages, pretends to read it again and points out page 16 -> first word " Quadratic " -> page 59 -> first word " Ukulele " Next is page 259, 1423 spins 3 times, 4th time first word is: "Tenacious", so on: 159 only page 159; page 13 only page 13; page 7 only page 7; 582 indicates page 206; 752 only page 348; 1001 is page 249; 40 indicates page 40; 51 refer to page 51 and 31 point to page 31 Like that => " rabble ", " table ", " egg ", " arbiter ", " equable ", "thud", " effect ", " elsewhere " and " name "

=> combine the first letter of each word, we get: Qutr Teae Teen, close to the match Quarter Teen- the second victim BB tries to mislead by saying that the 4 word difference is too much so it doesn't match even though it's very close (actually) to test Naomi), Naomi deduces that: the skewed words are in the numbers > 376, they are all numbers that have to be rotated -> find page 259 again, the word "Tenacious" takes the 4th letter because it has to be rotated. 4 times -> get the letter A, Equable spins 2 times to get the letter R

=> Quarter, similarly we get Quarter Queen (also feat BB because it's the guy who created the puzzle)

=> L was right, the killer left a clue about termites.

In the second scene: Naomi researched the room and the victim's house, so she asked BB:

"What would you do if you wanted to lock the door from the outside?"

"Use the key"

"Not so, if you lose the key"

"Then I use the spare key"

"If you don't have a spare key?"

"Then I won't lock it anymore"

=> a bit stupid but reasonable 🐧

Misora hints at door-locking tricks in detective novels and hints at opening the doors of the first victim as well, which BB quickly refutes: "No way, the gap isn't that big. , and the angle is too small to cancel the force. You can try, but most of the rope will put pressure on the door ---> Before the door can be locked, it will pull the whole door towards you" . => Reasonable, onscreen knowledge and in fact BB used the trick to lock the door but in a different way, he used this trick to avoid Naomi's attention to the lock.

BB asked Naomi to take a break and made her a cup of coffee full of sugar so that she was forced to run to the bathroom to rinse her mouth (later) because it was sweet. BB suggested to Naomi the name, abbreviated: B.B. Q.Q and B.B but since that was criticized as silly, he suggested going directly to the 3rd scene because if everything that can be found leads to the 3rd scene then go straight there. Then as he said, after talking, Naomi had to rinse her mouth -> Naomi accidentally looked in the mirror ---> accidentally saw the "reverse" From there, pulled out 3 pictures, we saw, the victim B.B is on his back, Q.Q is on his stomach and B.B is on his back

=> BB-QQ-BB ; Heads-Heads-Heads ; 9-4-9 days (the time interval between the victims) because B and Q are quite similar in lowercase and because of the victim's prone position

=> b.b-q.q-b.b

=> Abnormal score in the 2nd victim, the body is lying on her stomach and wearing glasses, because this girl is not wearing glasses => it is a hint at the crime scene 3: West L.A., Glass station (synonymous with glasses)

Misora at L's suggestion showed that: 3rd incident happened on 13/8 -> the cut on the first victim is a Roman numeral, but we say to Arabic, if we put 1 and 3 next to each other, we will get the letter B -> the first incident occurs on July 31 -> reverse 31 into 13 => B.

Regarding days 4 and 22, then 3+1 = 4 and if we take a number in the tens place and put it in the units row, we get 13 => B

=> BB, in other words, 4 days 22, 31, 4, 13 all have 2 numbers and equal + again = 4

=> The 4th case will take place 9 days after the 13th i.e. 22 and the victim is BB. The inference is close to standard with BB and BB following the momentum of further fixing. Of course Beyond Birthday was the killer, so he followed suit, although he added that the inference was not enough to say that the fourth victim was Q.Q.

The third victim's body was left with one leg in the bathroom, and one hand was missing, so Misora and BB began to deduce in the direction of "What was supposed to be here but disappeared". BB suggested Misora by lying in the victim's shoes and telling about a case he once solved: About a case where the victim was stabbed to death and cut off his finger to get a ring, then BB and his accomplices (maybe the police) caught. With the intention of suggesting and possibly helping.

The problem is to compare 2 cases, one side is missing a finger, one side is the whole arm. Before the suggestion, Minosa began to think about the victim wearing a watch -> After confirming that the victim was right-handed => maybe the victim was wearing a watch on his left hand => maybe the perpetrator put his wings Hands go to distract. Seeing that Minosa could not continue to speculate, BB suggested: "Head, arms and legs are all different in length....". => Minosa speculated that the clock hand, minute hand, hour hand and second hand => is a clock face that only shows 12h45p20s.

BB said: Maybe the hypothesis is correct, but if you rotate the angle of view, it will output numbers like: 6h15p50s or 9h30p5s

=> forcing Minosa to solve the next message. This time Minosa relied on the suggestions and stuffed animals in the corresponding positions along with the Wara Ningyou doll (which was taken away, now only has a nail hole)

=> the specific time is: 6h15p50s

However, if it is a.m or p.m, it will be accepted -> BB combines the numbers, getting 061550 -> the construction permit number of an apartment building, where 2 people named B.B live there. => I don't need to worry about a.m or p.m anymore. Regarding this room for 2 people named B.B, there are room numbers 1313 and 404.

Beyond Birthday asks each person to wait in a room and convinces them to lend the room in exchange for paying the rent and pretending to be the victim to wait for the killer. And also asked not to call the police because no matter how good they deduce, there is no basis and evidence to mobilize the police, and so the murderer may escape.

About the plan: By being born with the eye of death, BB quickly found 3 victims with the right time of death -> Then sent that sentence to the LAPD, because she was a person at Wammy House, so BB knew L's people would be there and pick it up. BB knew Watari and Wammy House would warn L so he didn't try to stop him --> He figured that L would come in after the 2nd or 3rd case although the timing wasn't ideal because L couldn't make it to the scene by himself and would send people instead. It is estimated to send at most 3 people (because the police basically cleaned the scene, so there is no need to bring too much) or if

lucky, only 1 and fortunately only 1, with the eye of death, BB discovered immediately discovered Naomi and speculated that she worked for L and approached her, calling herself Rue Ryuzaki.

As for the fact that he was investigated and hired, it was simple, after leaving Wammy House, BB might have solved the case with the police a few times like Conan, so with his business card, he had enough grounds to convince the victim's family. person to investigate.

Under the name Ryuzaki, BB plays the role of an eccentric, suggesting and reasoning with Naomi all the time.
And the cases were created to disguise BB's last self-immolation. Smash the fire system, turn off the alarm, wipe your fingerprints, then pour kerosene and set yourself on fire

With the eye of death, BB can find suitable locations for staging the self-immolation, of course it is not easy because L can send to more than 1 person, BB also calculated in advance. And because of self-immolation, so there is not 1 clue, any hint, and so there can be a 5th case or not, no one knows

=> The case cannot be solved and if so B will win L. Also thanks the eye of death so the killing will go more smoothly, one at a time

The weak point in the plan is the locked rooms, BB rejected the ideas because it is a hindrance to pay attention to this. The trick to lock the door is as follows: Use dolls to disguise the nails outside the meaning of the message ---> Start from the door latch ---> Loop the thread around the knob at the same height as the knob. The doll is placed opposite the door opening ---> back to the door ---> around the nail head ---> from there go through the next wall ---> round the next nail ---> Then slip under the door ----> Pull hard

---> Lock the door left. The key is to use the nail as a pulley, thus avoiding the force of dispersing the thread onto the door

---> The thread does not touch the door but goes through it

--> Directly on the nail and all forces are on. That way, when you're done, just drop one end of the thread and then pull it back. (Minosa was lucky to compare the nail position, so B failed).

As for the way to commit the crime, it is simply taking advantage of the victim's family's absence, sneaking anesthetics and killing them, then staging the scene later to make it look as weird as wiping a lampholder for L or Minosa to imagine. like a puzzle.
