KANADE CASE

DL WASNT NEEDED. Half of the DL instances that were interpreted by the doc werent even DL just hibiki misdjudgement and monocrow staements that werent even prohibited by the rules .Monocrow wouldnt interfere or aid with the culprit which he almost didnt do(in the monocrow file they literally didnt put the hour to allow kanade case to work which was explained the first time in the trial of kanade).First monocrow statement wasnt even used as a premise for the trial (this case was baffling to me and the other could be deduced(this day wasnt a pool sanitation time) rules stated that there was a day of pool sanitation in the week. Firstly being a pool sanitation day doesnt equate of having a post sign that indicates it where it wasnt stated anywhere and anyone could move it(basic observation). And it is even more unimpressive that they didnt inmediatly asked when they heard the rules. How did they know when they first entered and investigated the island when they entered the pool that it wasnt a day of sanitation, when they could have died. It is common sense to ask it.Imagine they asked monocrow when was they day of pool sanitation and he didnt mention it. He obvioiusly couldnt say yes or no to not deceive the rest of the cast. Then you couldnt take as a fact that it was a day of sanitation bc of the premises of before the pool gate records reasoning of syobai where the timeframe between)9:54 and 12:54 could be a person bc of the premises of in and out, the premise of the deception being centered about the time and statement of shinji that he didnt saw anyone around 12 (by this logic you couldnt enter the pool and needed to be outside). After you genuinely didnt need DL. I am going to repaste my arguments, yapping a lot.

In the trial they parted from the premise after the explanation of monocrow that the deception was built around the timeframework of the murder. Then they checked the ghost house records.They were like this: I am not going to repaste codes bc it will become confusing. 17:55 IN, 17:57 IN 19:24 IN , 19:36 OUT AND 19:42 OUT. And 4 records at 19:58 that were discarded bc they were inmediatly explained. Then with the message of setsuka(murder) she sent that she had a bussiness in the ghost house before 18:00 to frame iroha. Then they reasoned that setsuka was killed in the ghost house bc it had only at in at 19:57. Making the premise: If there is only an IN it is the victim handbook. Then they discarded at 19:24 IN and 19:36 OUT bc it was Sora time of entering then discarding another use of a handbook. Then the killer entered at 19:55 matching with iroha alibi. And went OUT at 19:42. Message of the devil around 20:00. Then kanade reasoned if they truly searched every corner. And she didnt searched behind the folding screen where the killer could have hid himself with the body and the origin of the blood was from there(blackout between 19:55 and 19:57).Having and hour and 45 minutes to dismember the body.They asked for alibis and the ones who watched the parade were Sora Yuki Yoruko Shinji Kanade(Hibiki) and Nikei. And the ones who didnt have alibi were Mikado Teruya Syobai Hibiki and Hiroha. Iroha alibi was seeing Hibiki in itself that kanade gave some validity bc when they finished the parade she told them about the message of setsuka before the message of the devil. But it is a genuinely meaningless deception from the Premise: There wasnt any flesh of blood in the floor. That concludes that the murder couldnt be there. Furthermore with the Premise ; Three hours were needed to dismember the body.(Assuming a character has the same knowledge as syobai) it is completely debunked, and also even with just the first premise it was already debunked. Then from the premise: If there is only an IN it is Setsuka they reasoned that the crime was commited at the pool. Hibiki was tried to be framed by her own sister Kanade through the fabricated story that whenever she is cornered she becomes anxious, child manner, she loses control of herself and loses her memories.You could reason and assume that it wasnt a pool sanitation day bc of the previous reasoning.Then kanade countered that it wasnt in the pool and the whole murder was a contradiction itself bc of the premise that

there was only on IN at 17:24 and it was Setsuka.(19:10 IN and 19:15 OUT were already discarded bc it was yoruko who was investigating) leaving only one minute to commit the murder. But it is a complete fallacy when that premise doesnt even work here bc in the ghost house records there were two handbook that werent unidentificated(they identificated Sora and 19:58 IN that couldnt be possible murders) but this case was completely different. We start from the premise that there were three handbooks that werent identificated. From the premise: You can use a handbook. But then you deduced that it isnt restricted the limit of usage. Which means that atleast three handbooks that werent unidentified were used. Assuming that one is of setsuka and the others are one of hibiki as she is related due to the witness of iroha, kanade trying to frame her with her fabricated story, hairpin(isnt DL).It leads to wonder who is the other handbook. Then the only one who knew about the personality, memory loss of hibiki was kanade. Coupled with she asking out of nowhere in the first trial if accomplices could be allowed. It makes sense to deduce that she was one of the accomplices and murderer. Then you need to deduce the fabricated pool gate records.Coupled with the reasoning of the abdomen missing and kanade being left handed to hide her mark and frame hibiki it makes sense.Premise at firstly of the trial: Timeframework of the murder was concealed bc it revealed it would make the work of the killer in vain.So you could infer that he or she used some tricks as explained with other example with the knife in the trial.Then doing as syobai and applyin REVERSE thinking process with the first premise and assuming that kanade lied.Kanade: There wasnt anyone between 9.54 AND 12:54. And start deducing from the premise deduced beforehand that you can use any handbook you can conclude some premises.(Syobai tested it) Premise 1: Anyone can use the any handbook if already registered. Premise 2: If one person has two or more handbook he can use one for enterin IN and the second one to get out making an IN/ or with his own handbook make and OUT. Premise 3: If two persons have three handbooks they can pass it between them(no restrictions) then one can use his handbook IN and pass it to the other person entering and making and OUT.Premise 4: If a handbook havent been used and you are already inside the attraction you will make an IN to get out. Premise 5: Kanade and Hibiki needed a three hour framework to dismember the body Premise 6: To use Hibiki Kanade needed to give a mental shock to Hibiki from her own fabricated story for her to lose her own memories and help her parents from the motive video. Then if you apply reverse thinking then you could start deducing from the assumption that everything kanade said was lying(syobai did this) and then between the 9:54 and 12:54 there was a person in the pool.So how could it be done. Manipulating the gate records between 8:44 and 9:54. Kanade also said that bc there was only an IN it was Setsuka(total fallacy bc of the premises of above) then you could assume that Setsuka entered between (8:44 and 9:54 or anyother time/ but to manipulate timeframes they needed to have 3 handbook since the beggining so 8:44 and 9:54 is the most logical choice while remaining logical). Then to have the three handbooks they needed for setsuka to enter at 8:44 or 8:45 it didnt matter to fabricate the situation of two people entering and going out. So the handbook of the accomplice wasnt used till now but they needed the victim handbook and one of the accomplice handbook.THEN THE ORDER DOESNT MATTER HERE REALLY. But from the multiple choices of logical lines syobai used one that made sense.Kanade entered at 8:44 with her handbook IN, then Setsuka entered at 8.45 making an IN. Then from premise 3 Kanade passed her handbook to Hibiki making and OUT at 9:22 and then she used Setsuka handbook to get out making an OUT at 9.54 from premise: Second time you use a handbook it doesnt matter who use it you make and OUT while already having a time to kill Setsuka or made her look like she was killed to give a mental shock to Hibiki to accomplish premise 6. Then she needed the dismemberment tools to cut her between 12:54 using her Handbook making an IN.Then Hibiki used her own handbook to make an IN AT 17:24 AND 17:25 Kanade left with her own handbook making an

OUT(Premise 6 accomplished to have 3 hours to dismember the body) . Here it doesnt really mater if you use Kanade or Setsuka or Hibiki handbook to accomplish this records bc they were already reset using each setsuka and kanade two times. Then Syobai keeps reasoning how could they transfer the body to the Ghost House?.Then he reasons that they used the monorail it would have blood marks if they didnt use body plastic bags with the plastic bags that were in the ghost house it wasnt hard to reason that they used them to carry it. Then Hibiki moves the corpse to the monorail at station C goes to the ghost House enters at 17:55 IN caus OUT goes to the monorail at 18:00 catches the second train at 18:05 goes to C gets the corpse and then comebacks A reaching A at 18:15.
All this with the preassumption THAT SHE COULD USE SETSUKA HANDBOOK.
THEN IT COMES THE REBBUTAL OF KANADE WITH THE FIRNGERPRINT THAT NEEDED TO BE USED TO USE SETSUKA HANDBOOK THAT IS PIVOTAL TO THE CASE.(I guess that everything till here is what happened in the trial and could be reasoned through sheer logical reasoning that is what syobai did and cant be debunked).
This is where my biggest issue lies, Kanade countered reframing from hibiki to iroha by stating The rules: You can use a handbook(meaning you can use anyone) but you can only do it with the fırgerprint, as in Emma case with kokoro part of finger. But when they where investigating the island, syobai was already testing the trick of the in and out record(just after they arrived before murder happened) and threatened iroha by making her hand the e handbook after saying literally word by word to activate the e handbook with the fingerprint and Then he did the trick without the fingerprint(hand or finger or iroha cut)directly involved in the trick to test it . But this directly contradicts kanade counter of iroha reframing because hibiki had access to the corpse of setsuka meaning she could activate the e handbook and assuming that she doesnt turn it off she could hide it in her clothes transporting the handbook activated to haunted house being able to do it. This is when the second line of logical reasoning enters. You could argue that the action itself of entering the gate needed the fingerprint simultaneosly pressing it to enter that means that you effecrively need to carry the hands or part of fingers making the counter of kanade totally logical. But that raises another issue in the pool gate records were like this ;there were a Lot of codes that i am not going to repaste because it will become confusing. First kanade enters in the pool 8:44 Then setsuka at 8:45 Then hibiki enters with kanade handbook at 9:22 making and out Then kanade exits with setsuka handbook making an out at 9:54. Then she reenters at 12:54 with his own making an IN .Then hibiki leaves the pool at 17:24 making an IN with her own handbook used for the first time. Then kanade got out at 17:25 with her own handbook making an out after y using it four times.Making the and only IN record needed in her schemes etc…

Do you see the problem? Hibiki entering the pool should have been only possible by folllowing the first path of logical reasoning (because they threw it over the the fence). The steps would be activating it with kanade fingerprint her handbook Then throwing it to hibiki and making her enter. Or using the setsuka handbook activated it with her fingerprint while she was unconscious and repeating the process with hibiki but that would debunk the whole process of the reframing since hibiki could have activated the e handbook in the pool and Then carried it with her and use it. Making syobai reasoning possible.

Then if you follow the second path of reasoning where you need the fingerprint being pushed to the handbook to enter or exit the gate it would be a logical reframing and debunk syobai reasoning.But it also debunks the process of manipulation of pool gate records. Hibiki needed another e handbook mandatory to conceal her presence(if she used her own she it would result in an IN) but if we use the second path logic that debunks syobai. Hibiki would need the

fingerprint of kanade or setsuka to execute the action(shown in the image of the explanation of the process of the trial). Then kanade would need to cut her own finger and pass it to hibiki(not possible in this trial when it would lead to people suspecting her and when she was framing herself as the last contingency before double blackened) to perform the action. With setsuka e handbook if you reasoned it from another angle could have worked but it would gave the same problem she would need a hand or a finger and while it could work because it wouldnt have mattered to cut her before or after. ~> you reach a wall, kanade didnt have any of the materiales to dismember a body she only had a knife that would made impossible to dismember a part of setsuka body and give it to hibiki. It couldnt be possible but Lets imagine she cut the edge of the finger then that also debunks iroha reframing because it was based that hibiki couldnt have carried the hands(fingers werent cut and perfectly conserved to prevent this reasoning used in previous trial). And trying to cut the wrist without the material needed for would be impossible and collapsed the timeframes. (All this with rules of no tresspassing the gate without registering in the gate that would made you be punished that applies to setsuka or kanade if they tried it). THEN YOU ENTER THE ONLY PATH OF LOGICAL REASONING BC SOMEONE CLARIFIED IT FOR ME
Albanocagebox Clarified for me that ONLY the act of using a fingerprint is needed to register and the rest doesnt matter. Which validates syobai reasoning as explained on other paragraphs (even talking in account that you needed to keep turned on the e handbook(again explained in other paragraphs)). But that was why i mentioned the two lines of reasoning. The first the one aforementioned. And the second the one you just mentioned that you needed the fingerprint to enter a building. That indeed debunks syobai reasoning because you would indeed need the hands. But if you apply all that to the other procceses in the pool It is ilogical.

First Lets get to what happened in reality the syobai line of reasoning where the two twins committed the crime. Wouldnt hibiki entering would need kanade or setsuka fingerprint applying that logic (bc they needed an out, hibiki couldnt use her own handbook bc it would register an IN, twins have different fingerprints and obviously setsuka also). That is why i said that kanade needed to cut her own hand or finger or setsuka(if she cut her finger it would debunk the whole proccess of the premise of the hands transport) or the hand. But you needed the dismemberment tools that were retrieved at 12:54 making it logistically impossible and collapsing the time frameworks).Then in the case of iroha was the same she couldnt cut setsuka hand or finger and obviously couldnt transport the corpse) she left at 9:22 with setsuka handbook you could assume that she could carry the corpse to the gate and use her own fingerprint , but from the premise that you need to enter the gate or you will be punished (extremely risky). Then she enters at 9:54 with her own handbook making and out. Cuts pieces leaves at 12:54 using with using setsuka handbook in leaves the corpse pieces at monorail C. And Then gets in at 17:24 with her own handbook and Then leaves with setsuka handbook at 17:25 . It is logical but needed the corpse to be out almost thirty minutes where it could be seen a catastrophic strategy but logical. But what happened in reality was that kanade and hibiki manipulated the gate records and that was illogical in itself. By that premise. But Then in the second line of reasoning they reach a nash equilibrium where iroha or kanade and hibiki (colaborated didnt deduced double blackened)could be the murderers. But from the premises that kanade itself said that iroha account was to some extense true bc she said it before the devil message etc, hibiki hairpin etc it would tilt in favor of suspecting hibiki. Iroha framing was relied on logical reasoning not on witnesses and physical evidence. (Double blackened didnt even need DL just some mid reasoning about the loopholes when kanade itself in the first trial was the one who asked about possible accomplices).

THEN YOU COULD ARGUE THAT SETSUKA HANDBOOK WOULD TURN INTO SAVING MODE AND NEEDED THE HANDS TO TURN IT ON AND REGISTER MAKING SYOBAI DEBUNK SUCCESFUL BUT IT IS DEBUNKED EASILY.
Pool gate records are manipulated flawlessly and the firngerprint didnt need to be used to enter the gate simultaneously. But if a preestablished time was said hibiki just needed to touch the screen in order to keep it active. It wouldnt make also sense if it had a fixed time to be turned off if the own person didnt want. Then as i said in the other paragraph the layer of deception of the clothes wasnt even needed she could naturally just have it in her hand. And touch it before it would turn off keeping it turned on. Again from the premise : You need a fingerprint to register =/= different to keeping it alive. Making syobai reasoning true. If you left the HANDS at monorail station C you didnt need to hide anything.
I WILL DEMONSTRATE IT WITH TWO SIMPLE STRATEGIES THAT HIBIKI COULD HAVE TOOK TO KEEP SETSUKA HANDBOOK ALIVE AND NOT NEEDING TO TURN IT ON AGAIN NEEDING THE FINGERPRINT.
You dont need to hide the handbook if every single one are the same Iroha actually would mistook it for Ibiki own handbook. You could infer that she would notice two handbooks, but That is factually incorrect when hibiki could hide her own handbook turned off and still execute the strategy bc that handbook even if it is turned off can be turned on bc It is her own handbook by the premise: YOU CAN ONLY REGISTER VIA YOUR FINGERPRINT. Then that means she would enter with setsuka handbook not her own making it at IN at 17:55(cause the black out). Premise: Syobai took five minutes or more to test the in or out trick and he didnt mention anything about being turned off . Then right about she would exit she would touch setsuka handbook hide it in her clothes and use her own making an IN at 19:57 having atleast almost 5 minutes or much more presumably to hide and change handbooks in their clothes making an out with setsuka handbook completing the strategy in a relative short amount like you said. Even if that doesnt convince you there is another strategy just as she would approach the ghost house (predicted where iroha could be) she would hide in the side where iroha couldnt see her covering her body the handbook (she knew iroha would be at a distance)(INSIDE THE SKIRT STUCK CLOSE TO HER LEG HAVING A FINGER TOUCHING THE SCREEN) and then doing this in the second time bc the first wasnt neccesary and at the third time she would just hide it in her clothes having all the time setsuka handbook at control.(AND HIDING IT FROM IROHA).
I WILL JUST FINISHING MY REASONING
After pulling one of the two strategies that i mentioned with her own handbook and setsuka handbook. (Before sending the setsuka message with setsuka handbook before 18:00 to libre Iroha)(In the two minute timeframe she produces the blackout. She goes to the monorail at station A (train 1 without the delay of 5 minutes AT 18:05)goes to C and comebacks to A. She finish at A at 18:15 CHANGING TRAINS AT C AT 18:10 by that timeframe. She had 45 minutes where everyone was at the parade and iroha was elsewhere to leave the pieces and hide herself near the ghost house . Then at 19:36 after receiving the signal of kanade (bc she manipulated the events leading everyone to a desígnate spot) Hibiki just needed to carry the corpse pieces to the entrance enter at 19:42. Enter with setsuka handbook and she would be inside. Use the blood packs that were behind the paper wall that was intented to look like the crime was commited there. Then set up the altar. Send the message of the devil(at the point of retrieving the corpse she already obtained setsuka hands). Now the counter arguments that i can think of is that she needed to hide two handbooks in her clothes but it wouldnt stick out because no one is going to see her . Then carrying the corpse she could carry in one go(Legs behind armpits. Then four bags in each hand. In the right hand a hand an arm a foot and the head. And in the other a hand a foot an arm and the torso keeping the weight balance. She could just do it in two or three times

given that she had forty five minutes Then setsuka handbook would be turned off but she already had the hand she just needed in the moment of entering the gate to get it out of the plastic bag and register and Then you enter in the ghost house at 19:42 with that six minute gap and did all mentioned previously. In my opinion everything was logical unless you have counter arguments.

Then you just needed to reason double blackened . Premise : Hibiki and Kanade were together with setsuka between 9:22 and 9:54. The killing method was a Sharp object.~> Knifes that everyone had in their own monocruise ship room. Premise: The abdomen is missing. Initial rule: If There are consecutive murder the fırst one will be the one recognized.Premise x: Kanade asked if there accomplices for a case and monocrow said yes. Conclusion from premise x : Two or more people could participate in a single murder.Premise: There isnt any rule of limiting the attacks for múltiple murders and for a single murder. Then Conclusion: If there isnt any limit for attacks it means that in the timeframe hibiki and kanade could deliver two attacks with their knifes~> it could be the one attack before or after it doesnt matter. Then how do you determine the culprit? For a consecutive murder There was one single murderer bc of the time frame of being before to not overload the trials. Then by this logic you can assume that the one who attacked before or after would be the murderer. Then you could deduce that it could be the one who attacked first or after. But there isnt any rule that you have to stab at a determines time it could be when ever for the two people~> Then they could stab at the same time. It would create a contradiction by the last Logic. If they had no error time they would both be the culprit applying the last Logic. Coupled with the misssing abdomen the statement in the interview about their synergy and their deceptive and cunning nature shown before to deceive it would lead to conclude that both would the murderer to make another layer of deception. And Then you have resolved the case.
