Leo Analysis

Welcome to my first document ever! I will be explaining Leo's outsmarting feats. This document is made for fun purposes only.

%11 Finished

Horror House Navigation Feat

Leo was going to a horror house with his two friends. The building had 3 floors and it was pitch dark inside. He checked the business' internet side to see if there would be anything useful 3 days before the event. He found the original blueprint of the building and examined

it once. The building's floor surface was 265m² in total. When it was time for the event he visualized the building and navigated the layout of the 3D objects in the environment. He had also learned about the potential traps used in the seances and managed to escape with no difficulty.

(Information Gathering, VSI, WMI, Trap Evusion, Planning)

Young Bowling Prodigy

Leo at the age of eight, watched his mother who was a teacher of old age group bowling class from a distance. Without any instruction, he copied the technique flawlessly and adapted it to his smaller physique, achieving multiple strikes.

(Information Gathering, Observation, Learning Ability)

Bridge Building Challenge

During 8th grade Leo's class went on an architecture academy trip. During the event, students were asked to construct a stable bridge using wooden sticks. He was the only student who successfully built a structurally stable bridge, but he didn't know anything about it.

(VSI, FRI, Fluid Intelligence)

Leo can reproduce drawings with near-perfect accuracy, reflecting precise spatial measurement and form replication. His consistent success with spatial puzzles, origami, and Rubik's cubes further underscores his high-level spatial manipulation and visualization skills. In video games with fixed maps, he consistently memorizes entire layouts within a short time, recognizing all key locations with exceptional accuracy.

(VSI, WMI, Observation)

Floor School Mapping

After transferring to a new school in 10th grade, he walked through the building once during registration. By the next day, he could recall every room's location and mentally reconstruct the full four-floor layout.

(VSI, WMI, Learning Ability)

Leo is fluent in multiple languages; Turkish, English and German. He also has some knowledge of Arabic, Russian and a few other languages. He was always the best student in verbal lessons in the classes he belonged to. He is really good at writing paragraphs and he has read 30 books in only one summer break.

(Overall VCI, Crystallized Intelligence)

Highschool Entry Exam

In the High School Entry Exam, an exam for which most students spend years preparing, he reached the top 2% percentile with a score of 467/500, despite studying only during the final month and paying little attention in regular classes. Throughout his school life, he has maintained a habit of studying only the night before exams, yet repeatedly scoring 95+ out of 100. His year-end averages across grades have been: 98.5, 100, 99.5, 98.5, 99, and 96 (from 4th to 9th grade), reflecting long-term stable high reasoning-based performance. In his most recent IQ assessment focused on fluid reasoning and pattern-based tasks, he achieved a perfect score in the perceptual reasoning section.

(All Intelligence, All Cognition, Convergent Thinking, Deductive and Abstract Reasoning, Cognitive Adaptability, All FSIQ)

Flash Mental Arithmetic Feat

Leo's class had a "Flash Mental Arithmetic" test in 4th grade, and despite the amount of numbers given and the time being unknown, Leo was one of the only three students in a 42 student class that came up with the correct answer.

(CPI, Perception, Convergent Thinking, Deductive Reasoning, Mathematical Intelligence)

During a psychology test he managed to remember his neighborhood by his smell that he moved away at the age of 2 (He is 15 currently). He memorised when a person told him their phone number. He managed to memorise a 11 digit 0-1 code during an escape room computer game.

(Working Memory Index)

Perfect 500 Points

In fifth grade, Leo had a test all the fifth graders in Turkey had, and he got perfect 500 points answering all the questions correctly which makes him first place even though he is tied with many students.

(Crystallized and General Intelligence, FRI)

IQ Tests

9th grade school test: 136
Middle school test: 135
Psychologist's test: 131
Academic site test: 133

FSIQ Sub-cats from best to worst

VSI > FRI > PSI > VCI > WMI

The document isn't even near complete, but I highly doubt it will ever be finished anyway. This document was heavily focused on Full-Scale IQ, Intelligence and Cognition categories, but other categories might come soon! That's it for now, thank you for reading if you made it this far.

This document is entirely written by me, Leo. My Discord is "mightbeleo_".
