Siesta Doc

The Ace detective

The Ace Detective, codenamed siesta of the Tanmoshi light novel series will finally have her doc. This doc was created by four people Me, Gekonen, CentoMC, Blue Yamada,Horney Senpai and Movvern
Due to the bad adaptation of the light novel, it portrayed Siesta's intelligence and character and the series as a whole in a rather poor way, it led many to avoid giving it a chance and dismissed Siesta's intelligence and character as a whole.

This document will hopefully dispel many of the misconceptions regarding her character, as well as shine light on her achievements and writing as well.

Document Key: made by Animangamastarmedia or I AM and Matty the Ace Detective

Blue: Detective Skills
(Sensory,Psychology,Field Skills)

Red: General Tactics
(Planning, Strategy, Deception, Foresight,Countering)

Purple:General Intelligence, Reasoning, Thinking,FSQI, Cognitive Abilities

Green: Emotional Intelligence + Social intelligence + Manipulation + Resistence

(Ability Model for EI)

Orange: Power Scaling

Origins

Bat's Capture

(Pre-V1)-Siesta had ordered the men in black to send Kimizuka on the same plane Bat was taking, which she figured out in advance, alongside an attaché case with a gun loaded with bullets caped in her blood, registering her seat next to Kimizuka as well, in order to begin her first steps of her planning process to destroy SPES. (Planning Aim, Short-Term Planning, Planning Process)

Siesta had known in advance that Bat was ordered to execute a hijacking on this plane as a punishment for betraying the organization, meaning he'd have to kill himself in the process, if he doesn't, the organization will simply come after him.

(V1) - Siesta was asleep on the plane, next to Kimizuka in the seat she ordered for him, eventually her cue came, and the plane

attendance asked for a detective, Siesta responded solidifying her role and swiftly pulling Kimizuka alongside her, labeling him as her assistant and calling him “Kimi

Arriving at the head of the plane, meeting Bat for the first time in person,Siesta remained unfazed,fabricating her and Kimi’s origins and making up a code name for him on the spot,despite being under the gaze of a dangerous individual with unknown potential.

Once Bat offered his challenge, telling Siesta he’ll let all the passengers go scot-free if she manages to deduce the reason for his hijacking of the plane, Siesta through this goes through 2 different thought processes:

I. Bat’s goal with this stand and his thought process -

1- Bat is trying to play with the chances of his survival, despite him being under a punishment and is forced to commit suicide alongside everyone on this plane regardless.

2- Siesta questions Bat’s motives directly, to which he responds that he’s simply doing this for the thrill of it.

->
A- this contradicts her intel, as if she answers correctly, he should theoretically leave the plane alone, but that goes against his mission, which means Bat is lying to cover up the true reason for this show-off.

B- Bat is attempting to purposely “fail” his mission to get captured and escape the clutches of SPES.

Siesta profiled Bat at this moment from understanding all the variables about his person;
1- A partial Android.

2- Tasked with a suicidal punishment due to a betrayal.

3- He refuses to go down without a fight, even if it's merely for show.

->

1- Bat is a prideful yet afraid of death.
II. How to counter any logically possible action he might take depending on her answer -
The best way to deal with Bat is to corner him in a way where she confirms his hubris and causes him to feel humiliated and in turn, causes him to switch gears from escaping the organization to offer her as a catalyst to forgive him and spare his life.

This will directly create a situation where she can test Kimi's abilities, effectively using her analysis on Bat's mentality to her own gain.

Siesta answered Bat accordingly, saying the only reason he hijacked this plane was due to boredom and having too much free time, and despite Kimi's reluctance of believing Bat's initial provocation about this claim, Siesta implied that Bat wouldn't be such a coward that he'd lie his way out of his own challenge, this causes Bat to laugh maniacally at Siesta's boldness and admits his defeat, Kimi despite his great perception and ability to read people and understand their underlying intentions couldn't see the hollowness in Bat's laugh,yet Siesta could,which confirmed her previous thought process, and cued her to continue her strategy as planned.

After they defeat Bat.
Kimihiko asked Siesta when she prepared the musket bullets infused with his blood and Siesta replied that he had organized everything in advance and Kimihiko with Siesta's confirmation understood that it was Siesta who sent him on the plane, for this plan Siesta had two objectives

-to ensure that with Kimihiko her rifle passes through the airport controls, so that he can then use it to nullify Bat's powers towards her, since this is the ability of her musket-

-to have with him and exploit, Kimihiko's unfortunate ability to attract cases towards himself, to solve as many cases as possible and also to have advantages against the SPEES organization-

(Planning Aim,Short-Term Planning, Planning Process,preparation, Planning Foresight,Information gathering, Bluffing, Emotional management,Abductive Reasoning, Psychological Analysis, Emotional Understanding,See through people,ProfilingStrategy Adaptability,Anticipation,FRI, Connecting the dots Emotional perception)

Medusa case

(V1) - Siesta and Kimizuka hear rumors about a "Medusa" that lives in a castle in the woods; suspecting it's another SPES Android, though upon entering the house, the old man living there welcomed the detective and her assistant normally, and confessed that while he has heard of the rumors claiming the residents of the house had been turned to stone by a "Medusa" Monster, he explained that in reality, it was his daughter who was the victim, claiming that

2 years ago she got into an accident, and from him stating that “only her life was saved”,
Siesta deduced that his daughter was in a state of post-coma unresponsiveness, simply via reasoning the dread the grandpa had in addition to his emphasis that her “life” was saved, not her health, implied she lost something large despite survival, and the mostly likely case that could suffice any context that could swirl rumors regarding a “Medusa” would be a post-coma unresponsiveness. This would generally require base medical knowledge on how comas work.
Siesta, however, had also noticed that despite his dread for his daughter’s state, there was a hint of ecstasy that Kimizuka missed.
This was coupled with a contradiction in his actions, where despite the hot weather and the lack of air conditioning, he didn’t open the windows, and the fact he knew about the rumors but said rumors not only excluded his existence, but assuming he had to go outside to get necessities like drinks probed the idea that he should’ve at least been accused of some sort of unnatural abilities or associating with the “Medusa” if he had been living in the castle,
the old man has either gone mad due to his daughter’s state or he had ill intentions.
Once the old man brought in the cold drinks,
Siesta immediately noticed a small discrepancy in the drinks’ color, which likely came from Organophosphate Pesticides that the old man might’ve put in them,
immediately she stomped on Kimizuka and made him tumble over the man spilling the drinks. She went to dry the old man’s clothes and pickpocketed him, retrieving an antidote, which she realized was Pralidoxime,she didn’t think this was enough to fully confirm the old man’s intentions, however, as he took them to his daughter’s room,
she noticed that wearing a respirator to breathe,
and that while her blinking was monotone and robotic, there was will and emotion behind it, which shouldn’t make sense if she was unconscious, the panic and stress behind her mechanical blinking was her trying to convey a message,with this, Siesta confirmed the old man’s intentions and that he was actually targeting her and Kimizuka,the respirator meant that they were breathing in the same poison that he failed to give them in their drinks, the respirator making sure Mary doesn’t inhale it.
With this, Siesta restrained the man and let the air circulate to stop Kimizuka from getting badly affected by the poison he already inhaled.
Notes:

1. Organophosphate Pesticides are the most likely substance for poisoning the drinks the old man could've used based on his dialogue, because it induces a coma in high doses and with the right amounts could replicate Mary's vegetative state that he tried to induce for Siesta and Kimizuka as well.

2. As for Pralidoxime, it reactivates the inhibited acetylcholinesterase enzyme, allowing the nervous system to function normally again. It's most effective when administered early in the course of poisoning, which is why the man had reserves of in his pocket to use immediately when he drinks the drinks or ingest the gas in his daughter's room, and it's how Siesta confirmed his intentions.

(V1) Hanako-san case

In volume 2, a week after Bat's hijacking, Siesta tries to convince Kimi to become her assistant,she asked Kimi if she could dry his back which he refused and siesta cleverly replied that she had thought to enter with a bath towel to talk to him also about being his assistant, knowing that kimihiko is a boy in full puberty,which is therefore in the phase of growth in which it has hormones such as androgens, estrogens and progestins at most, in fact kimihiko hesitantly rejection in a very obvious way than before.
After siesta asked him why he hates the idea of being his assistant and kimihiko replied that he always suffered because of this nature of getting into trouble. That's why his dream is to have a quiet and relaxed life.
After a while kimihiko asked Siesta what advantage he would have had if he had accepted, so siesta distracted him a moment from that question by telling him how he was a kind person,He also told him that he had ordered a pizza and asked if he had done the right thing and how he assumes that a year later they would get along very well and Kimi replied that they will not cooperate at all and that he is already frustrated with the current situation with her.
So siesta said to start talking again as his assistant, and Kimi says that she should tell him the advantages of his assistant's job,but siesta continuous as if

he had seen all wondering if there was something that worried him and that as an offer to join as his assistant and that she would solve all his worries and kimihiko was shocked that siesta had perceived that he was worried about something.
After talking about the case of Hanako-san, siesta via kimihiko collects information that there is a sudden increase in the number of students of the athletic teams who have stopped attending school.
Then siesta repeats again that Kimi is a kind person, deducing that the missing students were not his friends but still cared for them and that through his nature to get into trouble, He also had the nature to help others which he denies but is confirmed through that no one had warned him of the preparations of the cultural festival.
so kimihiko unwittingly opens up to her, telling him about the fact that his parents abandoned him and his whole situation.
On the day of the festival, Siesta and Kimihiko decided to meet in front of the school. Siesta had decided to wear the school uniform to impersonate herself as a simple student going to the festival. When they entered the school building *Siesta immediately noticed that there were students dressed up in a rabbit costume, wearing sneakers and she noticed that only one of them was carrying pamphlets in which the schedules of the festival activities were written. Through Kimihiko's information that most of the missing students were from the Athletics Club, she inferred that the students dressed as bunnies were the Hanako-san and that the one who distributed the flyers was a Hanako-san.*
So siesta and kimihiko went to the bunny who distributed the booklets to see the schedules, Siesta noticed that there were 15 min breaks per hour and asked the rabbit that since those breaks are not opening hours and therefore the activities will not be open, making it seem like an obvious statement in which the rabbit nods, in fact kimihiko said that there was also written not knowing that in reality siesta was contacting Hanako-san that she wanted to buy drugs.
Her plan was

1: Ask for information that activities will be closed during breaks

2: say on purpose that it seems that during the moments of break, they will not be able to visit the structure of the haunted house, knowing that inside that structure there was the third floor of the girls' bathroom, thus contacting Hanako-san

3: if the rabbit was really Hanako-san, he would fall into her trap

siesta organized this whole plan by visualizing and memorizing the school map that was in the flyer by looking at it for just a moment(new+old building school), then building in her mind a kind of mental path before seeing the horror attraction of the abandoned house in the old building, through this path siesta had taken kimihiko to all the possible stalls, predicting that kimihiko would get a stomach ache and would go to the bathroom on the third floor

The day after capturing Hanako-san, Siesta and Kimihiko were sitting in a Bar that was in an airport and talking about the case of Hanako-san and Siesta with a little deduction explain how the Hanako-san spread in Kimihiko's school.

1:The organization SPEES started to spread Drugs in Kimihiko's school

2:Due to the strong addiction of the students they also became sellers to earn money and buy more and more drugs and so the number of Hanako-san increased

3:Rival groups were formed among the dealers and the Hanako-san were ashamed of having obtained illegal drugs and were not willing to
show their appearances. However, they felt that if the cultural festival was crowded
they could hide in rabbit costumes and decided to act there to sell as much drugs as possible

(V2) Jack the ripper case

Kimihiko and Siesta are in England (London), they are having fun on the beach. After the Opening we see them on a case with Fuubi-san from police. Fuubi-san visited them on the crime scene where Siesta and kimi were staying, casually smoking a cigarette. She revealed she had been deployed to England and was returning to Japan soon. Fuubi Kase, a red-haired policewoman we met in Japan, hadn't shown up for almost three years. She unexpectedly requested our help in capturing a modern-day imitator of Jack the Ripper, responsible for recent brutal murders in London.

Initially sceptical, kimi pointed out that Jack the Ripper's crimes were over a century old. Fuubi confirmed it was a copycat, prompting a discussion that involved waking Siesta, who had fallen asleep at the park bench. Using a dramatic method, I threw a chopper to wake her up, which she effortlessly caught. We bantered about her ability to fall asleep anywhere and her reaction to the situation.

Siesta, half-awake, joined the conversation, and we continued to discuss the strange case of the revived Jack the Ripper. Kimi asked siesta what she thinks about the case now,

In a Baroque-style church, Siesta and kimi come across the gruesome scene of a bloodied corpse. They are investigating the revival of a modern Jack the Ripper, and although they have permission to be in the cordoned-off area, they have temporarily separated from their companion, Fuubi-san. Siesta identifies the work as that of "Cerberus," a codename for a figure associated with hell and known for devouring human hearts.

Siesta shows the mini a strange image in a small mirror, one of the seven tools at her waist. They kneel by the corpse of a clergyman beneath a large cross, carefully avoiding contamination of the crime scene.kimi, troubled by the sight and smell of death despite his experiences, questions if Cerberus could be the real identity of this modern Jack the Ripper.

Siesta confirms that Cerberus, codenamed after the watchdog of hell, is responsible for the killings. Despite many incidents and police efforts, the true culprit remains elusive, hinting at a larger conspiracy involving SPES, an organization possibly using androids like Cerberus for their crimes. Siesta theorizes that Cerberus is following orders, similar to how Bat, another antagonist they encountered, enacted a terrorist plot under organizational directives.

Determined to capture Cerberus, Siesta and kimihiko discuss strategies. Siesta, undeterred by the difficulty, believes they must act quickly to prevent more deaths. She reveals that she has encountered Cerberus's handiwork before and has been persistently thwarted by its advanced "nose," a highly developed sensory modification typical of androids.

Siesta formulates a plan not to chase Cerberus but to lure it to them, exploiting its fear of her. She explains that by making Cerberus believe it has a chance to defeat them, they can trap it. Kimi realizing he is to be used as bait, protests but acknowledges the necessity of the plan given the circumstances.

Despite the banter and tension, Siesta's determination to fight the "enemies of the world" is evident. She aims to capture Cerberus and force a confession to uncover the higher-ups orchestrating these murders. Kimi prepares himself for the dangerous role of bait, understanding the stakes and Siesta's resolve in their shared mission.

Kimi is stationed in a hotel room as bait to lure out a dangerous adversary known as Cerberus, under the plan devised by their partner, Siesta. Despite the protagonist's fear and anxiety about being left alone and potentially facing death, Siesta reassures them of their safety with a mix of seriousness and teasing. The conversation oscillates between tactical discussions and lighthearted banter, reflecting their complex relationship.

As the night progresses, Kimi waits nervously, their only comfort being the phone call with Siesta. Eventually, the dreaded moment arrives when Cerberus attacks. Relying on martial arts training and quick thinking, the protagonist engages in a desperate fight for survival. Although initially successful in disarming Cerberus, the enemy proves formidable by dislocating their own shoulder to escape a hold and retaliate with a gunshot.

In a final, desperate move to create a distraction, Kimi sets a fire using a Zippo lighter, triggering the sprinklers. This unexpected action startles Cerberus,

allowing the protagonist to push them onto the bed, potentially gaining the upper hand

Kimi reaches for the lamp switch by the bed and finds a girl in a camouflage suit lying there. Her wet blond hair clung to her cheeks, and her face showed a mix of embarrassment and terror. She introduced herself as Charlotte Arisaka Anderson, a 16-year-old American with Japanese heritage who works as an agent for an organization. I recognized her as an acquaintance who had once worked with us under Siesta's invitation.

I, Kimizuka, was cautious around Charl, who was injured and armed. I guessed that Siesta must have asked Charl to come, but the conversation took a sudden turn when Charl's demeanor changed. I realized that the real Charl would never admit defeat so easily.

The person claiming to be Charl revealed themselves to be Cerberus, a man with the ability to transform, similar to the mythological watchdog. Cerberus, aiming to take my heart, transformed into a werewolf-like creature and attacked. kimi avoided a fatal strike thanks to a warning from Siesta over the phone.

Siesta, a white-haired girl with a musket, arrived just in time to help. She leaped onto the fallen Cerberus and pointed her gun at him, reminiscent of a past encounter. Cerberus was baffled by her presence, as his sharp sense of smell hadn't detected her due to a special gas she had prepared.

Despite Siesta's preparedness, Cerberus transformed into a smaller form to escape her restraint and leaped towards the window, declaring he still had an order to fulfill—to obtain a living heart.

But he coulnd go fast enough away and would geht tackeld and gone under arrest but it dint kame so but this shure would be the plan dindt the next member of spes killed ceberus and fought them

(V2) Battle against Hel

When Hel arrived at the hotel and killed Cerberus, she managed to knock out and kidnap Kimizuka.When Kimizuka reopened his eyes he asked Hel if she wanted to kill him but Hel said no and asked him if he wanted to become her new ally of the SPES, or more specifically become Hel's Teammate.

Then Kimizuka asked what the merits were in having him as a companion but Hel replied that before talking about merits or demerits, she said that what is written in the Bible is absolute, referring to a book that She had in her hands and explains that in the Bible is recorded what will happen in Kimizuka's future (The Bible will be very important in the LN) which Kimihiko was naturally confused and incredulous at this.Then Hel asks him if he has ever heard of Nādi astrology, which is a book of prophecies left by an Indian sage.

kimihiko then remember that siesta told him about all kinds of curiosities including Nadi astrology

Notes:Nadi Astrology: In Tamil Nadu, the texts are mainly written in Vatteluttu, which was an abugida script used to write Tamil until the 12th century AD. The contents of the manuscripts are often attributed to the Vedic sage Agastya who is believed to have possessed a highly developed consciousness. These ancient records of providence were made famous by the practitioners around the Vaitheeshwaran temple in TamilNadu. First, the Nadi palm leaves are located according to the thumb impressions (right for men, left for women). These Nadi leaves were initially kept in the premises of the Saraswati Mahal library in Thanjavur in Tamil Nadu. Later, the British colonialists showed interest in the Nadi leaves, which were related to herbs and medicines, future predictions, etc. Some leaves were destroyed and the remaining were auctioned during the British Raj (rule). These Nadi leaves were obtained from the families of astrologers at Vaitheeswaran temple and have been passed down through the years from one generation to another.

There is also another group of astrologers who claim that the content written on the palm leaf is the conversation between Shiva and Parvathi. This is called "Shiva nadi jyothisham".

Then Hel continued saying that a month or so later, Kimihiko will return to his normal life that he always wanted which Kimihiko thought was impossible that Siesta would let him go even though he was happy to think that maybe in a month they would defeat SPES and then return to his quiet life but Hel continued saying that a year later Kimihiko would become a detective who would solve all kinds of problems which Kimihiko was skeptical about again.

Then Hel concluded with a sentence "the forgotten memories of a heart, a miracle sapphire worth 3 million Yen and the legacy of the famous Detective: if you can remember these words a year later, that will definitely be the answer for me"

Hel made an attempt to convince Kimizuka to join her with an attractive offer for him, that is to do nothing, spend the whole day playing on a large TV and eating freely and at any time any type of food possible, which Kimihiko refused which Hel had foreseen,

Then Hel as a valid alternative turned on the lights to show Kimihiko something, namely a monster at least 4 meters large in which Hel informs that the monster is a Biological Weapon capable of containing poison that can bind to all the oxygen in the atmosphere.

Then Hel to answer Kimizuka's question to know where they were, Hel says that they are under the Palace of Westminster, which is the seat of the Parliament of the United Kingdom.

SPES had allies all over the world among politicians, religious leaders, policemen etc. and this shows how big and influential SPES is, when Hel was distracted by the biological weapon Kimizuka managed to free himself from the handcuffs and asked Hel why she revealed this terrorist attack and the biological weapon, asking if she will use him as the first meal for the beast, but Hel says that the monster was already sufficiently fed and Kimizuka then understood why Cerberus stole human hearts, they served as energy sources for the biological weapon.

Hel then awakens the biological weapon, causing it to unleash and Kimihiko states that she must be stopped but Hel was confused by this statement since he was alone and without weapons

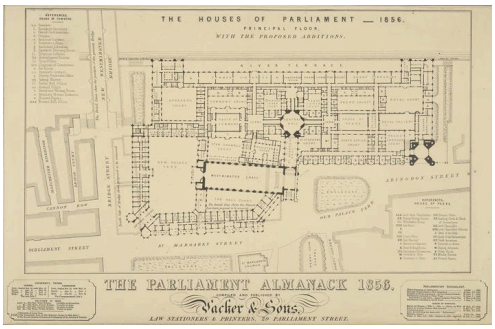

But Kimihiko replies that she misunderstood something or that he never said that he would be the one to stop her.

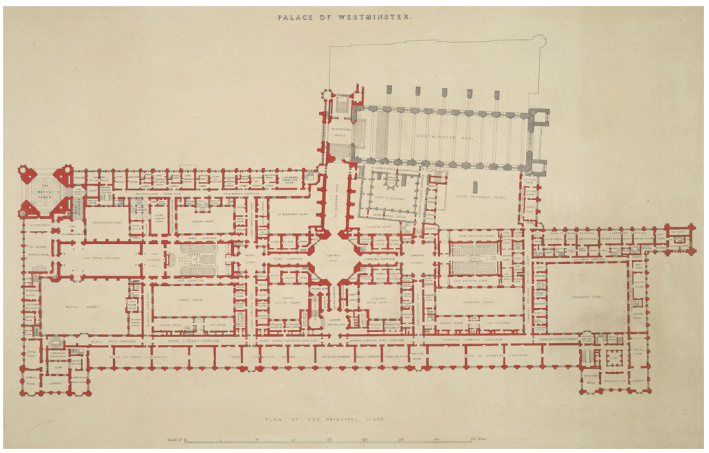

In fact, immediately after they heard noises and Siesta's voice screaming, until the wall of the room where they were in the secret base was broken and from there Siesta came out while driving a huge robot.

Kimizuka was shocked and surprised by this and asked Siesta where she got that robot and she initially replied that she found it along the way, which Kimizuka obviously didn't believe but then Siesta says that when she saw Hel kidnapping Kimizuka, she immediately went to negotiate with the English government to get the Sirius robot (the one she is currently riding) that the military was secretly developing and was still in development so it was also the first time Siesta rode it, But to find Kimizuka's location Siesta would have to visualize the entire structure of the palace.

The Palace of Westminster has a floor area of 112,476 m^2 (1,210,680 sq ft). 1100 rooms, and 4.8km of corridors. The palace has four floors and 11 courtyards.

then if we have to put the fact that the underground base could be large when the palace then siesta would have had to visualize another 112,476 m^2 (1,210,680 sq ft)

these are some maps that represent the structure of the palace (just to give you an idea of how big it is)

Hel then started to unleash Betelgeuse (the biological weapon) and Kimizuka climbed onto Sirius along with Siesta even though they were squeezed between the two of them since the robot could only be driven by one person so Siesta ordered Kimihiko to control the left side of the robot while she controlled the right side since now she couldn't reach both sides at the same time since Kimizuka was in the middle. But after some difficulty Siesta then decided to sit on Kimizuka's lap and take the lead driving both sides of Sirius, starting to fight seriously against Hel who rides Betelgeuse (the biological weapon), they started to clash in the underground base until Hel damaged Sirius' legs with her swords and tried to get out outside to escape and continue with her plan but Siesta follows her making Sirius fly out through her thrusters, Hel with Betelgeuse climbed the clock tower of London ready to release the poisonous gas from Betelgeuse's mouth

Then Siesta made a decision telling Kimizuka that whatever happens he must get away from there

Kimizuka was shocked to then find himself thrown out of the main hatch with the ejection seat making him abandon Sirius and then Siesta rushed with the latter falling both Sirius and Betelgeuse thinking more of Kimizuka's good than herself

Kimizuka worried then went to the place where Betelgeuse and Sirius fell, finding Siesta, injured but still alive and hugged her tightly and then scolded her for being so inconsiderate and stating that "he can't live without her" (even if he didn't mean it in a romantic and sentimental way)

At first Siesta teased him jokingly at that sentence but then starting with a sincere smile that she was happy that someone scolded her and worried about her in this way, however Hel came out of the flames seriously injured but still determined to win and attack then with the power of her eyes she ordered to Siesta

"you will remain still and you will be stabbed by me"

Siesta remained still making it seem like she was under the control of Hel's ability but in reality it was a trap since Siesta had immediately found a strategy to beat Hel's ability:

1:When Hel gave the order Siesta opened a mirror

2:Like this unconsciously Hel's eyes fell on the mirror looking at her reflection

3: in this way Siesta was not under the effect of Hel's ability but Hel herself was under the effect of her own ability

4: to trick her and make her continue to attack she remained still pretending to be controlled

So the final result is that Hel skewers herself to the chest With her sword, because of her ability, but before Siesta could give her the final blow Hel is saved by her companion namely Chameleon and they escape.

Since the threat was no longer there Siesta falls to the ground, since Hera fell together with Sirius, Betelgeuse and Hel from the top of Big Ben (which is 96 meters high) her legs were broken but she decided to stay standing despite the pain knowing that Hel was still alive around there

(V2) Bioweapon

How did Siesta figure out about SPES's bioweapon used by Hel?

Okay, so there's not just one big "aha" moment where Siesta suddenly knows everything about SPES's bioweapon plan. It's more like a whole chain of little things adding up observations, deductions, and just her being way ahead of SPES's twisted schemes.

Pattern Recognition from SPES's Past Moves

Siesta's faced SPES enough times to basically know their playbook by heart. Their style? Big, scary, chaotic threats that mess people up psychologically. Like, seriously, alien tails, Cerberus, the chameleon guy, and that mind control girl (what was her name again?). SPES doesn't do subtle, they go all-in with these crazy bio or superpowered stuff.

So if Siesta noticed SPES suddenly putting more resources into research, especially bioengineering stuff, that'd be a huge red flag. The jump from just "weapons" to "bioweapons" is obvious if you've got her level of pattern recognition. It's like solving a Rubik's cube, you see the colors start lining up way before anyone else.

Behavioral Cues from SPES Members

Siesta's strength is catching all those tiny details most people miss. SPES agents probably never outright said, "Hey, we're making a bioweapon," but their behavior gave it away. Were they carrying weird medical gear they didn't really need? Acting overly cautious about hygiene? That's not normal, even for criminals.

Little things like specialized supplies, strange lab equipment, or documents with vague scientific jargon weren't just random, Siesta saw those as breadcrumbs leading straight to something dark. She's a pro at reading these clues and putting them together.

The Informant Network's Role

Then you've got Siesta's huge network of informants. She's got people feeding her info constantly. Even vague whispers about "weird incidents" or "unexplained sicknesses" would have set off alarm bells for her. SPES might try to hide their tracks, but nothing stays secret forever.

Siesta's skill? Taking these scattered hints and weaving them into a clear story. One informant mentions a shipment of rare chemicals, another hears about secret "experiments" put that all together, and bam, you've got a roadmap to SPES's dirty secrets.

Decoding SPES's Motives

Knowing your enemy is half the battle, and Siesta nails this every time. What's SPES really after? Maximum fear, chaos, and despair. A bioweapon fits perfectly into that. If Siesta saw SPES hiring more scientists, funding sketchy projects, or hoarding resources, connecting the dots wouldn't be hard.

But it's not just logic. Siesta knows psychology too, human and not-so-human. She gets that bioweapons terrify on a global scale. That's exactly why SPES would go for it: "Go big or go home" is their motto.

Reading Intentions and Intuition

Here's where Siesta's gut really kicks in. She has this almost supernatural sense to read people and predict their moves. SPES's recent experiments and their obsession with bio-enhancements? Those screams of escalation would be deafening to her.

Her intuition isn't just a feeling, it's backed by sharp observation and experience. She's like a chess player seeing the checkmate three moves ahead. SPES moving from flashy superhuman powers to bioweapons wasn't a shock, it was just the logical next move.

It's Actually Obvious

Honestly, looking back, this whole thing was bound to happen. SPES has been messing around with "enhanced" people forever, alien tails, Cerberus, chameleon dude, and that mind control girl were all basically bio freaks. A bioweapon is just the next step in their messed-up plan.

The anime shows how Siesta's encounters with SPES slowly revealed this, bit by bit. It's like following a trail of breadcrumbs, except the breadcrumbs are superpowered monsters, and the trail leads straight to a doomsday device. If you pay attention, the bioweapon isn't some random surprise, it's the inevitable result of everything SPES has done.

Connecting dots, information gathering, observation, divergent, convergent and critical thinking, abductive, analogical, logical, abstract and inductive reasoning, foresight and anticipation, EQU

(V2) Alicia case

Initial Suspicion of Alicia's Identity

From the moment Siesta and Kimihiko encountered Alicia, Siesta instinctively felt something was off. Even under the influence of Hel's mind control, Siesta's subconscious flagged Alicia as unusual. This insight stemmed from her innate ability to detect behavioral inconsistencies. Though her judgment was partially clouded, Siesta's quick assessment and intuition allowed her to recognize Alicia's facade early on.

Recognizing the Knife's Disappearance

Siesta quickly noticed her knife had gone missing—a critical detail that later reappeared as evidence at the crime scene. Despite the interference from Hel's influence, Siesta connected this disappearance to Alicia. She didn't act on this immediately, knowing that patience was key. By retaining the knife as part of the larger puzzle, Siesta ensured it would play a decisive role when the time came.

Analyzing the Policeman's Reaction

The moment the policeman shot Alicia instead of treating her as an innocent child stood out as a significant clue. Siesta deduced that this action wasn't driven by panic but by recognition of a threat. The officer's perception revealed something crucial about Alicia's true identity, further cementing Siesta's suspicion that Alicia and Hel were linked.

Timing of Alicia's Appearance

Siesta carefully reconstructed the timeline, noting how Alicia's injuries matched those of Hel. The timing of her appearance immediately following Hel's supposed defeat was too coincidental. Despite Hel's manipulation, Siesta logically deduced that Alicia's transformation wasn't random but deliberate—a calculated disguise.

Memory Loss and Behavioral Inconsistencies

Alicia's claims of memory loss and her inconsistent recounting of events added to Siesta's growing list of red flags. Siesta's sharp psychological insight allowed her to see through these discrepancies, demonstrating her ability to detect subtle deception even while partially under Hel's influence.

Resisting Hel's Mind Control

While Kimihiko fully believed in Alicia's innocence, Siesta retained a critical level of doubt. Her mental resilience and instinctive distrust of surface appearances enabled her to partially resist Hel's manipulation. This subtle resistance allowed her to stay grounded in reality and identify Alicia's inconsistencies.

Understanding Hel's Strategy

Siesta understood that Hel's mind control was designed to suppress rational thought and distort perception. By anticipating Hel's methods, Siesta countered the manipulation through logic and careful observation. Her deductions were confirmed as Alicia's behavior and timing unraveled Hel's carefully constructed narrative.

Managing Kimihiko's Perception

Kimihiko fell directly into Hel's trap, convinced of Alicia's innocence. Siesta, however, saw this as an opportunity. She didn't challenge his beliefs outright, knowing that doing so would trigger defensive reactions and risk destabilizing the fragile situation. Instead, she subtly guided Kimihiko, planting seeds of doubt and allowing him to connect the dots later.

Siesta's indirect manipulation wasn't just tactical—it demonstrated her exceptional understanding of human psychology. She maintained Kimihiko's trust while carefully orchestrating a plan to expose Hel without arousing suspicion.

Outwitting Hel – The Strategy

1. **Weaponizing the Knife Clue**
   Siesta used the disappearance and rediscovery of her knife as a pivotal clue. She tied it to Alicia, recognizing its significance as both evidence and a psychological weapon against Hel. Instead of acting prematurely, she held back, letting the knife's implications build into a decisive revelation.
2. **Using the Policeman's Reaction**
   The policeman's decision to shoot Alicia provided a major breakthrough. Siesta interpreted this as an instinctive response to a perceived threat, using it to validate her theory about Alicia's identity.
3. **Timing and Observation**
   Siesta's attention to detail allowed her to notice the suspicious timing of Alicia's injuries and appearance. By logically piecing these events together, she identified the transition between Hel and Alicia as deliberate, exposing Hel's overconfidence.
4. **Manipulating Hel's Overconfidence**
   Siesta used Hel's belief in her absolute control against her. By pretending to be more manipulated than she actually was, Siesta gained Hel's trust, allowing her to gather evidence unimpeded. This subtle resistance required immense psychological discipline and resilience.

5. **Forcing the Reveal**
   Siesta created a scenario where Alicia had no choice but to expose herself. By cornering her with the accumulated evidence—the knife, the policeman's reaction, and the timing of her injuries—Siesta set a psychological trap that forced Hel's transformation back into her true form.

(V2) Alicia's rescue and First Battle against SPES

(V3) Siesta and Nagisa backstory

In volume 3 we discover that Siesta and Nagisa natsunagi knew each other 6 years before the current events, in an "orphanage" that was owned by SEED (the leader of SPES).

We discover that Nagisa was born with a heart disease and was abandoned by her parents from birth and entrusted to this "Orphanage" While Siesta was transferred to that facility only 3 months ago. Siesta approached Nagisa immediately, making friends with her, freeing her from her loneliness. At first they only chatted and played between the two of them until one day Siesta

dragged Acchan (The real Alicia) with her and Nagisa thought that she did it by taking her as a kind of toy since Siesta had commented that Acchan was interesting.

But Siesta had reasons to take Acchan with her

1:She knew how to build bombs and Weapons

2:actually Acchan was secretly planning a plan to find out the secrets of the orphanage or She knew what it is about the latter, which Nagisa and Siesta did not know

On a particular day While Siesta, Acchan and Nagisa were talking to each other, an elderly doctor who could have been 60 years old, disturbed them by entering the room and giving Nagisa a teddy bear that was given to her.
The gift was given by a certain Japanese couple involved in investments. It seems that they donated a lot to that orphanage, and even gave gifts regularly to the children of the facility So we find out that The orphanage receives a lot of donations of money from external sources.
Siesta however read the doctor's intentions, understanding that there was another reason why he went further in delivering the stuffed animal to Nagisa,In fact the doctor had to tell Nagisa to take some medicines. The collaboration that the doctor spoke about consisted of having hee test some medicines in this facility. The money used to manage this orphanage came from clinical trials on children that took place after every 15 days. Nagisa simply obeyed

After the experiment, a week passed and Siesta and Acchan did not show up in Nagisa's room Until one day they returned. Siesta then began to explain to Nagisa and Acchan her doubts about the orphanage. Even though she had only been in this orphanage for three months she wondered. Since the orphanage received so many donations from external funds/subjects, is there a need to do these clinical studies?

Basically as if to say: through these donations why not take the children of the structure to high-level hospitals, full of doctors and nurses who would have much more knowledge and experience than a single doctor? It would be much more logical and efficient

Then Siesta noticed something that not even Nagisa, who has been in the structure since her birth or Acchan and the other children had noticed.
She took the teddy bear that they gave to Nagisa, pulling the zipper on the back of the teddy bear, and a listening device came out and Acchan comments that it seems that the structure has been hiding something from them and all the children,Making Nagisa skeptical about this discovery,So Siesta thought that:

1: the structure was spying on them from the beginning

2: the story of the external Donations could be a farce to continue these clinical experiments

Then Siesta and Acchan apologized to Nagisa for not coming earlier since they were making their final preparations and Siesta says that she wants to reveal the hidden secrets of the facility, practically going against the adults,Siesta then took Nagisa on her shoulders ready to jump out of the window to get out of the orphanage,Which made Nagisa worried and agitated but Siesta reassured her by saying that her shoes can make they "fly"

So Siesta and Acchan took Nagisa to their Base which is located on the island where the orphanage is located From there it is discovered that their preparations would be that They have created by themselves weapons such as guns, rifles, swords, bombs and explosive devices with auto mechanisms. To build these objects You need to have a good knowledge and skill in the use of metals, the use of gunpowder, woodworking, use of various machinery etc

For example These are all the steps that Siesta and Acchan had to go through to even create a single rifle

First off you have to have a good understanding of the rifle components

Before you start, you need to know the basic parts of a rifle and what they do:

Barrel: The long tube that guides the bullet and gives it spin for accuracy.

Receiver: The main body of the rifle that holds the firing mechanism.

Bolt/Breech Mechanism: Loads the bullet, locks it in place, and ejects the used cartridge.

Trigger Mechanism: Releases the firing pin, which strikes the primer and fires the bullet.

Stock: The part you hold, providing stability and better control of the rifle.

Metallurgy and Material Selection

Choosing the right materials is important to ensure durability and safety:

The barrel must be made of strong, high quality steel to handle the extreme pressure and heat when firing, the receiver and bolt require precise machining to ensure smooth function. Springs and firing pins need to be made from hardened metals so they last longer and don’t wear out quick

2. Machining and Fabrication

The rifle parts must be shaped and assembled (you could use a CNC machine) not allat hard.

Barrel Rifling: Special grooves are cut inside the barrel (using methods like button rifling, hammer forging, or cut rifling) to make the bullet spin and improve accuracy.

Receiver Milling: CNC machines cut and shape the receiver with high precision so everything fits together properly.

Bolt Mechanism: The bolt must be designed with locking lugs to handle the force of firing without failing.

3. Ammunition and Ballistics

Understanding how bullets work is important to making a working rifle:

Cartridge Design: A rifle fires a cartridge, which includes a primer, gunpowder, and bullet.

Pressure Management: The chamber must be strong enough to safely contain the explosion that propels the bullet.

Projectile Dynamics: The shape, weight, and speed of a bullet affect how far it travels and how much force it delivers.

4. Safety Mechanisms

Safety features help prevent accidents and a lot of other dangerous shenanigans:

Trigger Safeties: Prevents the rifle from firing accidentally.

Bolt Locks: Ensures the bullet is properly loaded before firing.

Heat Management: Prevents the barrel from overheating, especially during rapid fire.

5. Now get all the stuff:

Barrel

Receiver

Bolt & Breech Mechanism

Trigger Assembly

Stock

Safety Mechanisms

Small parts (springs, pins, screws)

Make sure they're all machined otherwise you're screwed

Step 2: Attach the Barrel to the Receiver

1. Insert the barrel into the receiver, aligning it with the chamber opening.

2. Secure the barrel to the receiver using threading or a barrel nut.

3. Torque the barrel to the proper specifications to ensure a tight, secure fit.

4. Check that the chamber aligns correctly with where the bolt will sit.

Step 3: Install the Bolt and Breech Mechanism

1. Insert the bolt into the receiver and slide it into place.

2. Ensure the locking lugs engage properly to handle pressure when firing.

3. Check that the bolt moves smoothly when opened and closed.

4. Test the ejection mechanism to ensure spent cartridges will be ejected properly.

Step 4: ASSEMBLE

1. Attach the trigger assembly inside the receiver, aligning it with the bolt mechanism.

2. Secure the sear and firing pin system with screws or pins.

3. Install the trigger spring to ensure proper reset after firing.

4. Test the trigger pull and safety function (make sure it doesn't fire unless the trigger is pulled no shit).

Step 5: Install the Safety Mechanism so no one dies

1. Attach the safety selector or switch (depending on the rifle design).

2. Ensure it properly blocks the trigger when engaged.

3. Test the safety in both "on" and "off" positions to confirm function.

Step 6: Attach the Stock

1. Align the stock with the rear of the receiver.

2. Secure it using screws or bolts, depending on the rifle design.

3. Make sure the stock is tight and stable to absorb recoil properly.

Step 7: Perform Function Checks

1. Open and close the bolt to ensure smooth movement.

2. Dry-fire the rifle (without ammunition) to test trigger and firing pin movement.

3. Engage and disengage the safety to verify it works correctly.

4. Test the ejection system using dummy rounds.

Step 9: Barrel Alignment and Accuracy Check

1. Use a bore sighting tool to check barrel alignment.

2. Ensure the sights or optics are aligned properly with the bore.

3. Make any necessary adjustments before live testing.

Step 10: real test

1. Load a single round and fire in a controlled testing environment.

2. Check for proper cycling and ejection of the spent cartridge.

3. Fire multiple rounds and observe accuracy and reliability.

4. Make final adjustments if needed (e.g., sighting, bolt smoothness, trigger pull etc.

This is just to give you an example.

Anyway,Nagisa was shocked by this but looking at the base she noticed that there were many stuffed animals that seemed to be too many for only Acchan to receive them but she didn't pay attention while Siesta also noticed this detail and secretly began to suspect but together the 3 of them decided to work together to discover the secrets of the structure.

As the weeks passed, under Siesta's guidance, They investigated this structure. using Acchan's inventions for espionage, wiretapping, reconnaissance, all to gather information, and eventually they discovered the truth. That day, Siesta, Nagisa and Acchan were supposed to face the enemy. They arrived in the basement of the structure and the first thing they saw was a series of large water tanks. The tanks were filled with green liquid and contained some things connected to them by pipes.

They were not simply conducting normal clinical trials: there was a real human trial.

It was an experiment to inject seed of SEED into children's bodies to give them physical abilities far beyond those of normal humans. Their goal was to repeat the test experiments on orphans without relatives and finally create the "Androids". At a certain point the doctor arrives and changes shape revealing that he was SEED or a kind of alien, SEED claims that he did these experiments not for power or money but only for survival instinct.

Siesta and Nagisa then tried to threaten him but discovered that the weapons they had in their hands did not work. After this sudden revelation Acchan arrived who declared that she already knew about the trials that were done on children and that she was on the side of SEED.

But Siesta immediately understood that it was a lie because she understood it from the beginning

1:Acchan was sacrificing herself to end the Experiments on the Children of the orphanage

2:to do so she had to receive the Seed of SEED

3:to receive the Seed she is trying to deceive SEED into the fact that she deceived Siesta and Nagisa from the beginning, to make him Think that Siesta, Nagisa and all the children are useless

4:So SEED would erase the memory of all the children and then abandon them outside the orphanage

5:So Siesta pretended to be deceived to discover this bitter truth

But how did she understand it?

1: Acchan once said that she has her own diary where she writes and talks about the adventures of her, Siesta and Nagisa. So it wouldn't have been strange if she had used the diary to cover the gaps in the memory lapses that occurred after each experiment and that from there she had discovered the secret of the structure for a long time but she pretended not to know it by devising this plan

2: the too many toys that Acchan had in their Base, it was too strange that a little girl could receive so many so if it was true that she knew about the experiments, she had probably recovered the toys of the old children who had disappeared without them theoretically knowing,Which in the end was all true.

Then Siesta tried to free Acchan from the experiment but was blocked by Chameleon and so Acchan received the Seed but since She was not compatible in the end she died. While Siesta and Nagisa had their memories of what happened erased

(See through people, Acting skills,Info gathering, Observation, Deductive reasoning, Inductive reasoning,Connecting the dots, Logical Reasoning,FRI, Crystallized Intelligence, Knowledge,VSI, Learning ability,EP and EU, Social Integration, Leadership,Indirect Manipulation)

(V3) Kid Siesta vs Kid Charlotte Arisaka Anderson

After losing her memories, Siesta discovered SEED's seed and fled the island orphanage unnoticed. Realizing she was unprepared to face SEED with Nagisa and Acchan, and knowing she was no match for the Chameleon, she took the SEED

seed to gain superhuman abilities. This explains her physical prowess and ability to control the bodies of those possessed by her heart.

A year later, the Midzoev Federation sent Charl to kill Siesta, believing she could be a potential vessel for SEED. Knowing Charl's skill with firearms, Siesta wore a necklace made of a gem capable of withstanding cannon fire, predicting She would aim for her chest. When Charl arrived, she attempted to shoot her, but she stopped him.

Siesta asked Charl why she accepted the mission. She revealed she admired her parents, who had also worked to protect the world. Knowing she had failed and would likely be killed by the Federation, Charl agreed to help Siesta if she faked her death.

Siesta predicted Charl would shoot her in the chest for two reasons:

1- The chest contains the heart and lungs, three crucial organs. A shot to the chest could incapacitate or kill an opponent.

2- *Siesta deduced that the Midzoev Federation would target her heart, where the SEED seed was implanted. Even if Charl aimed for her head, the SEED would eventually consume her body and turn her into a monster. Therefore, destroying the SEED at its source would prevent this.*

-> Therefore, the only logical place to shoot her would be in the chest

3-Then Siesta through her information knew that it was the first mission that the Midzoev federation entrusted to Charl, so she was still inexperienced in the battlefield and was probably psychologically anxious for her first mission, which is absolutely normal for a 12 year old girl like her, so when Charl would have seen that the shot she fired at Siesta in the chest would not kill her, she would have been influenced by distracting herself thus creating an opening for Siesta that she would have exploited to block Charl, which went as Siesta had predicted

When Siesta asked Charl why she did this job and Charl replied that she was proud of her job because it was the same job as her parents, which was to protect the world, Siesta understood Charl's true intentions that she truly believed in her pride towards her job and her parents and that she would protect the world through this philosophy of hers, even though she is still a 12 year old girl with her own desires

that a girl of that age should normally have, Siesta fully empathizes with her comparing her to herself and that she can't die there after their fight, so she decided to help Charl in exchange if she would sometimes help Siesta, thus deciding to fake her death by deceiving the Midzoev federation

(V4)

(Pre-V4) - Siesta had foreseen the need for a contingency plan and had hidden a key to a locked drawer in London, knowing that it would serve a purpose in the future. She ensured that Kimizuka would eventually be drawn to this hidden information, demonstrating her ability to manipulate events beyond her presence. This was part of her overarching plan to leave behind critical intelligence that would assist in countering *SEED* long after she was gone.

Siesta had deliberately chosen to store the key in a way that required Kimizuka to actively seek it out, ensuring that only someone who understood her intentions could uncover its purpose. This demonstrated not only her foresight but also her confidence in Kimizuka's ability to piece together her trail of clues.

(Planning Aim, Long-Term Planning, Planning Process, Preparation, Foresight, indirect manipulation, prediction, anticipation, Emotional understanding- and engagement interpersonal, trap evasion and countering, reasoning and thinking)

(V4) - Siesta's preparations were not merely logistical but also psychological. By making Kimizuka work for the information, she reinforced his engagement in the mission, ensuring that he would remain emotionally invested in continuing her unfinished work.

This manipulation of human behavior through subtle strategic moves was a key component of her intelligence.

As Kimizuka finally unlocked the drawer, he found one of Siesta's "Seven Tools"—an item she had carefully concealed, ensuring that it would remain undiscovered until the right moment. This demonstrated her ability to plan in layers, securing her legacy through encrypted intelligence that could only be accessed under specific conditions.

Siesta had anticipated that Kimizuka would maintain their London home, knowing his sentimental attachment and logical inclination to preserve key locations tied to their past cases. By using this foresight, she turned his own habits into an part of her strategic framework.

This calculated preparation showcased Siesta's mastery in controlling narratives even beyond her presence, ensuring that her influence extended beyond her own lifespan. She was not merely a detective solving cases in the moment and before hand. she was an architect of future events, shaping outcomes through a combination of foresight, deception, and trust in the right successor and deceiving the SPES organization.

(Planning Aim, Long-Term Planning, Planning Process, Preparation, Planning Foresight, planning shielding, Long-Term Strategy, Strategy Adaptability and efficiency, shielding, Information Gathering and concealment, Bluffing, Psychological and logical Manipulation, Profiling, ,Anticipation, Connecting the Dots, deduction, abduction, anstract reasoning and overall thinking, Emotional understanding, VCI, Logical-Mathematical Intelligence, Linguistic Intelligence, Interpersonal Intelligence)

Eliminating Possibilities to Identify the Culprit

- **Natsunagi and Kimizuka deduce that Mia Whitlock must be hidden somewhere inaccessible to ordinary passengers.**
- **They logically conclude that a professional (like Olivia, the flight attendant) must have orchestrated it.**

- **Understanding Olivia's True Motives**

- **They realize Olivia deliberately asked them to solve the mystery, even though she was the one responsible for hiding Mia.**
- **Instead of treating this as an irrational contradiction, they deduce that Olivia *wanted* them to solve it either as a test or as a way to determine if they were worthy of meeting the Priestess.**
- **This insight goes beyond simple deduction and touches on psychological understanding—understanding when someone *wants* to be caught.**

Applying Knox's Ten Commandments (Classic Detective Rules)

- **The story explicitly references Knox's rules, particularly the one stating that the culprit must be present from the start.**
- **This suggests a deep understanding of mystery structure and logical reasoning, as they use these principles to confirm Olivia's involvement.**

Forcing Olivia's Confession and Acknowledgment

- **Their deductions are so precise that Olivia stops playing dumb and acknowledges their reasoning.**
- **This is a classic sign of intellectual dominance in detective fiction—when the culprit gives up resisting because the reasoning is flawless.**

Natsunagi is acting as Siesta's successor, then some of these deductions be influenced by Siesta's teachings.

influence, leadership, social IQ (social management and engagement interpersonal, social skills) VCI,

V4

Siesta used her knowledge of SEED's weaknesses. She figured out that SEED's weakness could be related to Earth's atmosphere and its inability to adapt, which was essential for defeating SEED.

deductive, inductive, abductive, abstract, logical reasoning, overall thinking, seeing trough people, Emotional understanding

vol 4 chapter 5 and 6

Siesta's influence on Natsunagi's emotional growth was subtle yet profound. She became a stabilizing force in Natsunagi's life, guiding her through complex emotional struggles. Siesta's ability to understand and manage the emotional states of those around her was key in shaping Natsunagi's journey. With Natsunagi's memories of Siesta and the relationship they shared, it's evident that Siesta's emotional intelligenceis great

Natsunagi's internal conflict, particularly her evolution into Hel, can be attributed to Siesta's impact on her emotional development. Siesta's presence seemed to act as a catalyst for Natsunagi's self-realization, helping her reconcile her inner turmoil. This connection reflects Siesta's deep emotional understanding and how she subtly influenced those in her orbit, allowing them to unlock their emotional potential.

I. Siesta's ability to assess and understand Natsunagi's emotional state allowed her to step in when necessary, offering stability and guidance during critical moments. Siesta anticipated Natsunagi's need for emotional support, positioning herself as a stabilizing presence in her life. This foresight played a significant role in Natsunagi's emotional journey, as Siesta's interventions helped Natsunagi face her challenges head-on.

II. Siesta's indirect guidance played a crucial role in the development of Hel, an alter ego of Natsunagi, reflecting Siesta's ability to nurture emotional growth in others. The growth of Hel represented a shift in Natsunagi's emotional maturity, and Siesta's influence allowed her to navigate this transformation. Siesta's understanding of human emotions helped her guide Natsunagi through this process without directly intervening, allowing Natsunagi to gain self-awareness and emotional clarity.

III. Siesta, through her keen emotional perception, could anticipate Natsunagi's emotional shifts and responded accordingly. Whether it was offering comfort or pushing Natsunagi toward self-reflection, Siesta knew when to intervene and when to allow space for personal growth. This skill reflects her high emotional intelligence, where she could read and respond to the emotions of others to foster development without overwhelming them.

IV. In both Natsunagi's and Hel's cases, Siesta's emotional intelligence was not just about understanding emotions but also about using that understanding to plan and guide others. Her approach to emotional manipulation was subtle but effective, aligning her emotional strategies with her broader goals. Siesta's ability to read Natsunagi's emotional state, then adapt her approach

based on that reading, shows how adept she is at managing not just her own emotions but those of others around her.

overall emotional inteligence all 6 categorys(engament, management, perception, understanding, facilitation and realization), social inteligence(Conflict resolution, Social skill, Conflic managment, Relationship managment, Social understanding, Social enganment, Social perception, leadership) emotional manipulation,

V4 an V6

Siesta had orchestrated everything from the beginning. Long before Kimizuka even stepped onto the plane, she had arranged for him to be there specifically ensuring he would be seated next to her. The attaché case he carried, the bullets infused with her blood, and even the confrontation that was about to unfold were all carefully set in motion as part of her larger plan to dismantle SPES.

She had known in advance that Bat, a rogue operative from SPES, had been sentenced to a suicide mission ordered to hijack the plane as punishment for his betrayal. If he failed to die in the process, the organization would hunt him down themselves. This was the key to understanding him.

As the call for a detective rang through the cabin, Siesta seized the moment, stepping forward with unwavering confidence and dragging Kimizuka into her scheme. She casually assigned him the role of her assistant "Kimi," she called him—as if it had been set in

stone long before this day. Standing face-to-face with Bat for the first time, she remained unshaken, effortlessly fabricating a backstory for herself and Kimizuka on the spot, concealing their true identities while analyzing the situation.
